But the fiduciary issue of currency notes is now within a million of the limit imposed by the Treasury Minute of last autumn, though it is apparently intended to dodge this awkward fact by regarding notes called in but not cancelled, amounting now to 6½ millions, as not forming part of the issue, since they are no longer legal tender. But since, until September 1st, the Treasury is bound to exchange any of them that come in for new notes, this book-keeping device is ingenious rather than convincing. It will be observed that, contrary to recent practice, in spite of the large expansion in Treasury notes, only a trifling addition of £100,000 has been made to the Bank of England notes held against them. The reason for this change of policy is obvious—the Bank of England's reserve is down to 15 millions, and its proportion to liabilities is 10.2 per cent., and there is clearly a point at which the Bank cannot be expected to let its reserve be depleted in order to back the Bradbury issue. The root of the whole evil, of course, lies in the outstanding Treasury bills, which enable the community to force the Government and the Bank to manufacture new credit, and so defeat all efforts to restrict inflation. Last week maturities of Treasury bills exceeded sales by over 8 millions, and Ways and Means advances for public departments declined by 10¾ millions, with the result that though the revenue exceeded expenditure by 10 millions, the Ways and Means advances from the Bank of England rose by 9¼ millions to 45 millions, and have since then been increased still further, judging by the figures of the Bank return. For such a state of affairs a rise in Bank rate would be the obvious remedy if the expansion were due to the demands of ordinary borrowers. But raising the rate will not stop the Treasury borrowing on Ways and Means if the holders of Treasury bills will not renew them. Would a rise in Bank rate induce holders of Treasury bills to renew them? We doubt whether it would to an appreciable extent, but if those in authority are convinced that it would, it will be their duty to impose it, if the expansion of Ways and Means advances continues. We should prefer to see the root of the evil attacked by a reduction of outstanding Treasury bills. The Treasury bond issue has not been a success, but it certainly did not exhaust the ingenuity of the Treasury. With revenue exceeding expenditure, and the Treasury bill menace removed or relieved, the necessary check to expansion must follow if the banks maintain a due proportion between cash and liabilities, without any necessity for a further rise in Bank rate, unless and until commercial demands on the Bank of England cause one.

Money has been plentiful, as was natural under the circumstances, and the discount market, after being capricious with a tendency to ease, hardened materially yesterday, owing to the apprehensions produced by the returns published on Thursday.

The Bank return showed a decrease of £126,000 in the stock of gold, an increase of £1,120,000 in the circulation (£100,000 notes having been transferred to currency reserve), and a decrease of £1,246,000 in the Reserve. Government securities rose by £16,354,000, and other declined by £693,000. Other Deposits were 12 millions higher, and Public rose by £2,314,000. The circulation of currency notes increased by £4,769,000 to £366,679,800, including £6,602,300 for notes called in but not cancelled. The reserve of bank notes was raised by £100,000 to £18,600,000, so that the fiduciary issue is £319,579,800, or only £1,020,200 below the maximum.

* * * *

In the exchange market interest has been concentrated on the very rapid fall in the dollar quotation. On Monday, the market being closed here, the rate in New York began to fall away. Weakness continued on the following day in London, the closing rate being 3.67½, and in New York 3.63½. On Wednesday rates opened here at 3.62½, and fell away steadily to 3.56 (the lowest rate since March last), closing only slightly better at 3.56¾. In New York, after opening very weak, rates hardened again to about 3.63 at the close, only slightly lower than the closing rate of the previous day. Opening on Thursday at 3.63, the quotation in London hardened slightly at first, but rapidly declined again to 3.57¾, closing only slightly better at 3.58½. Cables yesterday from New York show a considerable improvement, closing rates for the 5th being again back to slightly over 3.62; in London the rate went down to 3.60½, but moved up again towards 3.62. Although no predominant cause has yet been disclosed for the break coming at this particular moment, the general factors are quite sufficient to justify the fall. The disturbed outlook on the Continent is only strengthening the growing American tendency to hold off from Europe, and this is emphasising the effect of the usual autumn pressure, which is sufficient in itself to bring down the value of sterling considerably. To this may be added the continued uncertainty as to the intentions of France with regard to the payment of its share of the Anglo-French loan. It is rumoured that there has been considerable selling of sterling in New York on French account, but this is not certain. The Paris cheque, which on Friday last was about 40.73, has shown a corresponding depreciation, rising to 50.30 on the 4th, and showing only a slight reaction to 50.20 on Thursday. Yesterday the rate was quoted at 50.20-30. A new depressing influence on the value of the franc, which is now becoming realised, is the obligation undertaken by France to advance funds to Germany in connection with coal deliveries. As usual, the Belgian franc has risen in sympathy, but the margin between it and the French franc is rather wider than a week ago. Events in Poland have had their influence on the German mark, which, in spite of the steadying action of the Reichsbank, is at 166, about 9 marks higher than a week ago. For the time, the Polish mark itself is nominal at about 750-800. Prague, Vienna, and Helsingfors are all slightly higher at about 210, 675, and 110 respectively. Stockholm and Copenhagen have gone slightly against London, but Christiania at 23.58 is somewhat higher. Switzerland has moved from 21.90 to 21.82½, Spain from about 24.26 to about 24.17½. Holland, in spite of the appreciation of the dollar, has moved in our favour from 10.85 to 10.89-90. With the rise in value of silver Hong Kong dollars are up from 4s to 4s 1½d, and Shanghai from 5s 6d to 5s 8d.

* * * *

The following table shows Public Income and Expenditure for the week ended July 31, 1920:—

Receipts.	Mln. £	Expenditure.	Mln. £
From Revenue	23·434	Supply Services	11·540
Taken from Exchequer balances	350	Interest on Debt	1·897
	23·784	Sundries	181
Less—			
Reduction of debt	10·166		
	13·618		13·618

These operations reduced the debt by a sum of £10,166,048, and caused the following changes, which are reflected in our table of National Debt given in another column:—

	Mln. £		Mln. £
Treasury Bonds	+ ·310	Treasury Bills	— 7·694
National Savings Certificates	+ ·150	Advances by Public Departments	— 10·750
Bank of England advances	+ 9·250	Surrenders of Bonds, &c.	— 1·432
	+ 9·710		— 19·876

Property and income-tax brought in £6,112,000, while Customs and Excise contributed £3,335,000. Excess profits duties brought in £3,610,000, and special receipts under Miscellaneous amounted to £8,000,000. The floating debt was reduced by just over £9½ millions.

EVENTS OF THE WEEK.

JULY 31ST.—Interstate Commerce Commission sanctions increase in U.S. passenger and freight rates.

AUGUST 2ND.—Bank Holiday. Debate on financing German coal deliveries.

AUGUST 3RD.—Heavy fall in U.S. exchange. Debate on Sale of Dumps. Armistice negotiations in Poland postponed. Manifesto issued by People's Union for Economy. New British Note sent to Soviet Government.

AUGUST 4TH.—Further decline in U.S. exchange. Russian Soviet delegation at Downing Street.

AUGUST 5TH.—Premier's statement on Polish situation. New Irish Coercion Bill debated. Slight recovery in U.S. exchange.

AUGUST 6TH.—Soviet's Note received and considered by the Cabinet.

THE WAR ANNIVERSARY.

Six years ago last Wednesday we entered on a war that was to end war and establish the reign of liberty and justice and honest and open dealings between nations. The war ended nearly two years ago in a smashing victory for those who were alleged to uphold these ideals, but anyone who looks round upon what is now happening in the world fails to detect much practical advance towards their achievement. The Prussian militarists, discredited by defeat, have been replaced by a democratic form of Government in Germany, but the victorious Allies have not yet made up their minds to give the German people a chance of taking the place to which it is entitled by its numbers and industry in a new group of nations working together for the world's recovery. Their attitude towards Russia has produced results which now menace Europe with a terrible danger, and has led an English Minister to air his view, in an evening paper, that we should ask the Germans to help us to avert it. The new spirit in international relations seems to be very like a bad imitation of the old, rather less effective in expressing itself.

All the more reason why those who believe in peace and progress and sanity should work hard for them, and every week of the present chaos gives them new and stronger arguments. By fomenting war against Russia because it is governed by people whose methods are open to question—a pretty example of the application of the principle of "self-determination"—the Allies have made themselves largely responsible for the Russian advance on Warsaw. By hesitating between a desire to keep Germany economically crushed and an ambition to make her pay as much as possible in damages for her attack on civilisation, they now find it necessary to lend back to her part of these payments, so that she may feed her population and be able to pay more. It is a pleasant example of Alice-in-Wonderland finance, and a fit sequel to a war in which all the great and little belligerents and many of the neutral Powers marked the economic enlightenment of the twentieth century by meeting their financial needs with the help of currency debasement through the printing press. Nevertheless, it is something that the need has been recognised, and that the Allies have at last seen that nothing can be got out of Germany unless its population is well enough nourished to be able to work. The matter came up in a debate in the House of Commons last Monday on a vote for £100 towards a loan of £5,000,000, which is 24 per cent. of a total to be advanced by the Allies, apparently in order to save them from the admission that the Treaty of Versailles cannot be worked. Sir L. Worthington Evans and the Prime Minister defended the operation, as far as we were concerned, on the ground that it was good for France, since the loan is to be made in proportion to the amount of coal delivered, and out of the 2,000,000 tons a month promised by Germany not one ton is to come to us; and that the Government will not be involved in any fresh borrowing, since the loan will be, in effect, a return to Germany of sums that we have received or shall have received from freights earned—"some millions of pounds"—by German ships allocated to us, and by the sale of these ships, whose tonnage amounts to 2,000,000. As to the price that they will fetch, the Prime Minister suggested £20 a ton, so that it seems that we may receive a substantial sum during the current financial year on reparation account. Out of this sum we shall hand back five millions to Germany to enable her to pay for food. We call the transaction a loan in order to save the faces—somewhat gelatinous owing to frequent changes of expression—of our rulers, but it is clear that its repayment will lessen the amount that Germany is finally able to pay in reparation. A great deal of reticence was maintained concerning the agreements arrived at at the Spa Conference, so that we cannot be sure that anything like the whole story has been told even about this transaction. But as far as it has been explained, it shows how well common sense can work on the side of real peace and co-operation between nations, and how well statesmen can exercise their ingenuity in trying to conceal its working.

The same beneficent influence is helping us at home, as witness the general recognition that the present rate of official expenditure is impossible, and that a real effort has to be made to get back to sanity in spending. On Wednesday a manifesto was published in the *Times* by a

very strong committee of the newly formed People's Union for Economy, urging that we should refuse any extension of our commitments for the restoration of order in Russia or in the Near East; that we should reorganise our administration in Mesopotamia with a view to limiting the expenditure to a figure which would largely be borne by local resources; that we should stop doles, and that all undertakings which can properly be carried on by private enterprise should be freed from Government control; that new Government offices founded during and since the war, except the Health and Pensions Ministries, should be brought to an end, and that generally the nation should count the cost of all work entrusted to official hands. On Tuesday a debate in the House of Commons on the St Omer dump and the Slough Depot and the National Expenditure Committee's report thereon was an example of the kind of difficulty that arises when a Government finds itself with a mass of assets to realise and honest criticism is applied to the tangle of complicated transactions that result. What we have to do is to clear up the war's aftermath as fast as possible, and get back to sanity, remembering that taxation that encroaches on the capital fund produces unemployment, and that the state of things abroad calls for common work for the common good, instead of bickering over spoils that are only lessened by the process.

OUR INDEX NUMBER.

After falling for three months in succession, our Index Number has taken a slight turn in an upward direction. At the end of June, it may be recalled, the largest drop recorded for several years occurred, the total falling by 352 points, from 8199 to 7847. The upward movement at the end of July amounts to 29 points, leaving the total at 7876 and the percentage figure at 358. The latter compares with 379.6 at the end of March last, 293.2 at the end of July, 1919, and 282.6 at the time of the armistice. As will be seen from our usual table, while food and miscellaneous commodities have declined, this fall has been more than offset by the advance in textiles and minerals:—

Date.	Cereals and Meat.	Other Food Products (Tea, Sugar, &c.).	Textiles.	Minerals.	Miscellaneous (Rubber, Timber, Oils, &c.).	Total.	Percentage Change.

Favourable crop reports are responsible for a decline in most cereals, but British wheat is exceptional, with a rise from 78s 9d to 84s 10d per quarter. Potatoes show a seasonal decline, but meat, now decontrolled, is slightly higher. Tea has come to the end of its long decline, and shows a slight recovery, but coffee is again a trifle lower.

Among textiles wool has declined considerably, but cotton is higher, Egyptian having risen from 62d to 65d, and American from 26.62d to 27.29d per lb. The recent depression in Lancashire is showing signs of coming to an end, although great activity cannot, of course, be expected at this time of the year. According to Messrs Robt. Barbour and Bros.' monthly market report, "there has been a distinct broadening out of inquiry, and a marked change in sentiment has given the market a stimulus it was very much in need of.....It is true that renewed quietness during the closing stages of the month has somewhat dimmed a promising outlook, but optimistic anticipations none the less hold good." Flax is unchanged, but hemp and jute are slightly higher.

In the minerals section pig-iron and iron bars are unchanged, but another £2 has been added to the quotation for steel rails, raising it to £25 per ton. After falling heavily since February, lead, tin, and copper have recovered, though the upward movement in July was of small dimensions. In the miscellaneous group a further decline in rubber and a sharp fall in tallow are the principal changes. Oils and oilseeds are also a shade lower.

SUCCESSFUL PROFIT-SHARING.

(By a correspondent.)

It is no secret that the present Government favours profit-sharing as an aid to industrial peace. A year ago one of the "aims which the Government are anxious to see achieved" was the "securing to the workers more generally a financial interest in the success of the industry in which they work." Mr Chamberlain, in Committee on this year's Finance Bill, has accepted an amendment providing that in calculating the Corporation Tax, deductions should be allowed in respect of profits distributed among employees under a profit-sharing scheme. As profits received by workers are in the nature of additional wages, this concession is quite fair. Profit-sharing is indeed the best way by which an employer can pay his workers the highest possible wages.

Some reviews of the recently published "Report on Profit-sharing and Labour Co-partnership in the United Kingdom (Cmd. 544)" may easily mislead the reader. For example, there are firms which began profit-sharing, and have ceased to exist or have ceased to share profits, hence profit-sharing is not a success! But, obviously, profit-sharing businesses are not the only ones that die or change their policy. Again, the bonuses paid to workers in 105 cases are lumped together, and the average for 1918 is found to be only £3 13s 3d per head. But included here are 18,500 employees of a large insurance company, which, owing to war conditions, distributed nothing. Omit this case, and the average is £5 15s 2d in a year when the gas schemes, 31 in number, hard hit by the war, gave only £1 2s 3d per head to their 22,447 employees entitled to participate, and so pulled down the average.

Profit-sharing and its complement, co-partnership, answer a reasonable demand of the worker for the chance to gain something more than mere wages. The wage system will have to be supplemented by something else. The worker must go farther and become partner in the business that commands his working hours. How can this be done? By making the worker a capitalist. This is no Utopian aim. The way to achieve it is by profit-sharing and labour co-partnership.

The present writer has had many years' intimate knowledge of one of the most successful schemes in the country, and writes of what he knows. The scheme is that founded by Mr Theodore C. Taylor, in connection with the business of Messrs. J., T. and J. Taylor, Limited, of Batley. In 1895, when the scheme began, the business (textile) employed 600 workpeople; its employees now number over 1,800, and its turnover is much more in proportion. During the period named well over £400,000 extra to salaries

and wages (at trade union or customary rates) has gone to the workers. Out of the net profit 5 per cent. is paid on capital. Any surplus is distributed at the same rate per cent. to capital and labour (*i.e.*, on wages and salaries). Some workers, indeed, get double bonus, their wages being reckoned in the apportionment of profit at twice their actual amount. The bonus on wages has averaged about 11 per cent. per annum. The bonus has been given mainly in fully paid shares of the company, carrying title to dividends in cash. The cash dividends have averaged about 12½ per cent. The employees now own more than half the capital of the company, and receive three-fourths of the profits. Only workers may acquire shares. After a calendar year's service "every worker is a capitalist," and practically "every capitalist is a worker." The social status of the workers has been raised, and the scheme has given to many of them a keener interest in and greater zest for their work. No restrictions have been placed on their liberty. They are free to join, and most of them belong to, trade unions. Harmonious relations between the managing staff and the rank and file have been the rule. Only two (and these trivial) labour disputes have occurred—one 19 years ago, when five disaffected men left, and the other eight years ago affecting only 23 men.

The bonus shares do not carry votes, but they entitle the holder to the same rate of dividend as any other shareholder, and, in case of winding up the company, to share at the same rate in the assets. When an employee has a holding equal to his year's wages he may, if he wish, sell to any other employee any surplus beyond that holding. If he leaves the service of the company he must, as a rule, realise the whole. A co-partnership committee exists, constituted of representatives of the managing staff, foremen (elected by their fellows) and rank and file (chosen by the workers). Its functions are to promote the comfort and safety of the employees. An educational sub-committee supervises the attendance of the juvenile workers at the local daytime continuation school and the evening technical school classes.

The theorist who adopts an exacting definition of profit-sharing and labour co-partnership has one fault to find with the scheme—the employee-shareholder has no vote. By restricting voting power to those holding a minimum number of shares, as is done by some ordinary joint-stock companies, a show of democratic management could be made without risk of real interference in the control of the business. It is better, however, for the profit-sharing employer to make no pretence of giving what is deliberately withheld in the interest of the business. The workers themselves in a successful profit-sharing firm do not look for control. This is not to say that none should ever be admitted to the shareholders' meetings, much less that the workers should have no say in the conditions of their employment. In the case under notice, all the directors are employees of the company, and some fifteen other capable employees have been given "A" shares, entitling them to vote at shareholders' meetings; while in the co-partnership committee already mentioned all the workers have, by representation, a voice. Such a gradual growth of participation in control is the best line of advance. So long as goodwill exists, no difficulty will arise on the question of control.

Another criticism is that profit-sharing and labour co-partnership are anti-social, that they tend to unite an employer and his employees in a selfish regard for their own interests to the injury of the community at large. This is a groundless charge. There is no conspiracy to raise prices against the consumer, and if there were, the competition of rivals would thwart it. There is no indifference to the condition of workers less fortunately placed. In all social and philanthropic work the employee-capitalist takes a prominent part. The employees of profit-sharing firms are admittedly among the best members of the community.

A criticism, formerly made much of, was that profit-sharing and labour co-partnership were inimical to trade unionism. A well-known gas company's profit-sharing scheme, started some thirty years ago, involved at its inception a fight with a trade union. This fact has distorted trade union opinion on the subject. Happily, trade union prejudice against profit-sharing is yielding to further experience of the *bonâ fides* of the leading profit-sharing employers. There is absolutely no reason why trade unionism and profit-sharing and labour co-partnership should not go hand-in-hand. Stress has already been laid on the condition that wages at trade union rates must be paid before profit-sharing can be talked of. Some machinery for fixing these rates will always be necessary, and trade unions may well continue to fulfil their functions in this regard as well as in other ways promote and guard the interests of their members.

Still another criticism is that profit-sharing can only be applied to a few industries. There are, in fact, few businesses to which it cannot be made applicable. In form, it may, and must, differ according to circumstances, but the principle is capable of varied expression, as the Government "Report" shows. The present moment is timely for a great advance on the basis of this closer co-operation between capital and labour. Employers in large numbers are open-mindedly considering the adoption of profit-sharing. During 1919, schemes were started at the rate of three per month.

The writer would not advise legislation to make co-partnership or even simple profit-sharing compulsory by statute. Inevitably an Act of Parliament would contain irritating conditions, designed as safeguards of the respective rights of employer and employed, but, actually, a fruitful source of misunderstandings. Attempts would be made to evade the law, and an army of inspectors would be needed to see that it was carried out. The *sine quâ non* of successful profit-sharing—goodwill between workman and employer—would have poor soil for its growth. Enough if the Government will show its sincerity by adopting the principle of profit-sharing in its own productive departments.

RUBBER SHARES AND RESULTS.

THE war-time scheme providing for restriction of rubber output, inaugurated by the Rubber Growers' Association at the suggestion of the Government, ended on December 31, 1918. But tapping for rubber on the rested areas was not resumed at any great pace. Serious labour difficulties had to be overcome and the process of passing from the restricted period to what might be described as the decontrol was slow. Owing to the failure of the Indian crops a scarcity of rice had been experienced in the Federated Malay States since the early part of 1919, and in compliance with Government orders a certain amount of land was planted with foodstuffs. In referring to these orders the directors of the Consolidated Malay Rubber Estates, in their annual report, remark that the crops resulting were, generally speaking, a failure. The year 1919 was characterised by a steady decline in the price of rubber during the first six months. It fell from 2s 2d per lb in January to 1s 8d in June. This was attributed to heavy accumulation of the commodity in the East. The second half of the year witnessed steady and, at times, sharp advances in price—from 1s 8d to 2s 11d per lb.

The following table shows the trend of share prices during the past two years. Prices in 1914 are also shown as a comparison :—

Name.	Prices of 1918.		Prices of 1919.		Price July 27, 1914.	Price July 9, 1919.	Price Aug. 5, 1920.

In the table given below we set out the production of thirteen rubber companies during the past three years,

together with the price per lb at which the crops were sold. Figures for 1914 are also appended :—

Company.	Production. 1914.	1917.	1918.	1919.	Price pr. Lb 1914.	Price pr. Lb 1918.	Price pr. Lb 1919.
	Lbs.	Lbs.	Lbs.	Lbs.	s d	s d	s d
Anglo-Malay.....	1,384,382	1,720,247	1,386,264	1,662,991	2 1½	1 7	1 10
Chersonese	537,646	688,994	554,389	665,165	2 1⅝	1 6½	2 0
Cons. Malay	584,050	931,212	732,319	980,800	2 2¼	1 8½	2 0

Hglnds & Lowlnds	1,137,858	1,428,343	1,123,799	1,504,374	2 2	1 10½	1 11½
Linggi	1,389,290	2,533,572	1,782,052	2,804,960	2 1¾	1 11¾	2 1½
London Asiatic ..	1,131,430	1,569,021	1,177,919	1,615,566	2 1⅜	1 8¼	1 11
Selangor	614,199	829,092	669,408	888,830	2 2¼	?	2 1
Seremban	516,084	976,362	812,515	1,073,723	2 1½	1 6½	2 1
Shelford	157,130	275,962	264,053	343,279	2 1¾	1 7½	2 3
Sungei Kapar	658,616	841,494	680,386	842,556	2 2¼	1 8	2 0
United Serdang ..	1,827,943	3,269,210	2,678,564	3,048,945	2 3½	1 10½	1 9½

United Serdang still leads the way, but the increase in production for Linggi Plantations is worthy of notice. For comparison with the prices which were obtained for rubber, we set out below the cost of production per lb over the past seven years of seven of the companies :—

Cost of Production per Lb.

	1913.	1914.	1915.	1916.	1917.	1918.	1919.
	s d	s d	s d	s d	s d	s d	s d
Anglo-Malay	1 0·38	1 10·45	0 8·28	0 8·12	0 8·21	0 10·25	0 9·21
Consolidated Malay	1 0·61	0 11·93	0 9·82	0 9·93	0 11·52	1 1·17	1 0·70
Golden Hope	1 2·18	0 11·23	0 10·63	0 9·90	0 11·87	1 2·87	1 0·81
Highlands & Lowlands	0 11·53	0 9·29	0 8·82	0 9·41	0 9·42	0 10·83	0 7·52
Linggi	1 0·73	0 9·54	0 8·87	0 9·04	0 9·91	1 2·06	0 10·89
London Asiatic	1 4·76	1 0·83	1 0·40	0 11·04	1 0·36	1 1·64	0 10·12
United Serdang	1 7·95	1 1·50	0 11·79	1 0·60	1 3·96	1 1·88	1 0·86

Probably the most remarkable decrease recorded in this table is that for Highlands and Lowlands. Linggi Plantations, however, have excellent results to show in production costs.

The directors of Linggi Plantations in their annual report and balance-sheet invariably present an excellent and informative statement of affairs to shareholders. As showing conditions prevailing during 1919 the report, after noting that the price of rubber is at a pre-war average, proceeds : "But the food question and the problem of labour are more acute than ever, and give greater cause for anxiety than at any period in the history of our comparatively young industry. This, combined with the ever-rising prices of such necessities to the worker—be he European or Asiatic—as clothing, food—outside the burning question of the staple article of Eastern consumption, namely, rice—and of the minor luxuries which have, through custom, in a country now for many years the theatre of successful industry, become so closely akin to necessities as to rank as such; all this, together with the unexpected post-war appreciation in costs of estate tools and implements, drugs, machinery, building material—local and imported—has called forth a state of unrest among labourers and an element of anxious uncertainty in the administration of rubber properties, which will call for very special care in the conduct of our business more particularly to keep within bounds the certain rise in the cost of production."

In reviewing the position of the supply of labour the same report informs us :—"The loss by exchange in remitting to China or India, especially the former, has been so ruinous that it has in the first place deterred immigration to a considerable extent, and has tended to a general disorganisation among coolies, particularly in the case of Chinese. Instead of settling down to a considerable period of work to enable him to send money to his folk in China, the coolie, having collected a fair sum of money, which does not take him long at present rates of wages, clears off to the nearest town and does not start work again until his savings are finished; seldom returning to his previous place of employment. Then, again, the high price of foodstuffs has proved very disorganising, as coolie labour does not understand or believe quite in the shortage, and thinks it is being 'had' somewhere. It is generally accepted, moreover, that the supply of labour to-day is inadequate to the demand, and immigration is not balancing the increasing needs. To crown all, there are unsettling rumours abroad that huge areas of rubber are to be opened out in the more distant States, and that any wages almost will be paid for the necessary labour for the opening. In all, the labour position to-day is causing much anxiety, the more so as, in spite of much discussion, no remedy is apparent at present."

Our final table records the net profits after providing for all working expenses for this group of selected companies over a period of years :—

Net Profits after Providing for all Expenses.

	1912.	1913.	1917.	1918.	1919.
	£	£	£	£	£
Anglo-Malay	122,309	104,365	130,346	51,359	92,048
Chersonese (F.M.S.)....	20,764	29,081	47,296	28,668	67,234
Consolidated Malay....	58,265	34,712	44,064	18,472	39,438
Golconda Malay	33,679	24,868	38,009	24,485	30,000
Golden Hope	20,318	12,254	18,414	6,857	15,080
Highlands & Lowlands	136,441	79,079	98,352	48,168	99,056
Linggi.....	147,814	89,680	143,137	36,778	123,607
London Asiatic	86,202	61,274	91,932	36,368	87,725
Selangor	82,300	50,263	60,981	33,357	61,661
Seremban	45,027	22,471	51,257	41,080	64,991
Shelford	23,955	12,559	12,034	5,594	5,610
Sungei Kapar	65,867	42,364	41,873	24,652	47,700
United Serdang	72,596	112,813	216,765	76,878	107,726

Linggi shows a remarkable recovery in profits. Anglo-Malay, Consolidated Malay, Golden Hope, London Asiatic, Selangor, and Sungei Kapar, however, are all worthy of notice.

THE POSITION IN BOLIVIA.

The political upheaval in Bolivia, which has resulted in the expulsion of several members of the former Government, has been occasioned, like its immediate predecessor in the early months of 1915, by adverse economic laws. The new banking regulations, including the restriction of the privilege of issuing notes, as well as the new currency legislation, met with a good deal of opposition, which then resulted in the overthrow of President Ismael Montes, who is well known in England and France, where for some years he was diplomatic representative of the Republic. Then the former Finance Minister, Señor José Gutierrez Guerra, representative candidate of the "partido liberal," became favourite for the Presidency, and was elected to the Executive Chair on May 6, 1917, assuming office on August 16th of that year, while his forfeited portfolio was taken over in the meantime by Señor Nestor Cueto Vidaurre, and later by Señor Alfredo Ballivián. Under ordinary circumstances, Señor Gutierrez Guerra would have maintained office until 1921, his ample programme having comprised the commercial and financial development of the State. His three years of administration have undoubtedly marked an improvement in the economic affairs of the country, the revenue having advanced, and both the interior and floating debt having been reduced, while exports and imports have also shown a pronounced expansion. But the outstanding political event of Señor Guerra's Administration has been the accusation against the former President, Ismael Montes, of a multitude of sins, and his defence of himself in person before Congress on December 5, 1918. The adoption by the ex-Government of the Montes policy occasioned a split in the Liberal Party and the resignation of its most prominent member, Señor José Carrasco, Bolivian Minister to Brazil, who, with a view to compromise, has been invited to become Minister for Foreign Affairs in the Saavedra (Junta) Government. The assumption of office by Señor Saavedra of provisional President pending new popular election brings once more into power the Republican Party, of which he is now the head and was formerly vice-president. It is not, however, expected that he will be allowed to hold Executive office without fresh trouble, a section of the "partido liberal" being still dissatisfied and capable of showing resistance, while the scattered followers of ex-President Gutierrez Guerra remain obdurate.

It is expected that the financial arrangements tentatively made with the United States for the raising of loans in order to repay the French indebtedness and to build further lines of railroad will be carried out upon their original basis. In the month of May last a contract had been made between the Bolivian Government and a New York banking firm for a loan of $10,000,000. The loan, as stated, was intended to be applied in part to the conversion of the French loans of 1910 and 1913, the first having been contracted in Paris with the Crédit Mobilier Français for £1,500,000 (up to July 1, 1918, the circulation had not

exceeded £1,354,840); the second loan of 1913 having been authorised for the construction of the Quiaca-Tupiza railway, the amount issued being for £1,000,000, of which there remained on July 1, 1918, a balance of £946,280. The aggregate amount of repayment to the French banks will leave in the hands of the Bolivian Government a sum of about $4,000,000 (£800,000 at the present rate of exchange), and the whole of this is to be used for railroad construction. The Government of Bolivia, it is understood, purposes to issue 15-year serial bonds, bearing 6 per cent. coupon, worth under present conditions between $8,000,000 (£1,600,000) and $8,500,000 (£1,700,000).

The annual foreign commerce of Bolivia in imports and exports in 1917 reached nearly $75,000,000 (£15,000,000). In both directions the United States enjoyed the greater part of trade with the Republic, their share of the imports amounting to $4,355,000 (£871,000) out of a total of $13,058,000, and, of the exports, $22,193,000 (£4,438,600) out of a total of $61,522,000. The share of the United Kingdom in imports into the Republic increased from £473,790 in 1917 to £884,251 in 1918, and in regard to exports to the United Kingdom from £2,382,749 in 1917 to £3,596,887 in 1918.

The internal debt of Bolivia up to June 30, 1918, was estimated at 5,070,849 Bolivians, and its due recognition has hitherto been scrupulously observed by all Governments. Neither exterior nor interior national obligations can be considered in any way large when the wealth of the country and the value of its products are taken into account. The foreign commerce of Bolivia, notwithstanding that the Republic at present possesses no sea-port, is remarkable, inasmuch as the value of the materials which it exports is officially declared to be equivalent to four and a-half times that of imports. There would seem, however, to be some error in regard to the figures indicating the value of the material imported, arising, no doubt, from the fact that the antiquated Custom House tariff of 1905 has been taken as a basis, this tariff ascribing greatly reduced valuations to the large part of the merchandise imported. Those acquainted with the economic affairs of Bolivia are of opinion that to arrive at something like an accurate idea of conditions prevailing to-day, the total amount of the imports should be estimated at at least another 50 per cent. In this case, the importation figures for 1917 would show Bs. 33,480,831, and for exports Bs. 157,748,054; even then the value of exports would represent a value three times that of imports.

While, as above stated, the new Government under Señor Saavedra foreshadows better political relations with Peru, *per contra* they threaten some controversy with Chile. In Chilean Parliamentary circles a serious view of the situation is taken, especially of the declaration attributed to Señor Escalier (now the leader of the Republican Party, and who, with Señor Ramirez, is associated with Señor Saavedra in the new Administration), that "the Government will demand the cession of Antofagasta by Chile to Bolivia in order that the latter State may again have an outlet to the sea." In this connection one may recall the statement attributed to the Bolivian Minister in Paris, made in the month of March last year, to the effect that "both the British and French Governments had given favourable consideration to the Bolivian claims in the Tacna and Arica matter." The Chilean Minister to the Court of St James's, Señor Don Agustin Edwards, will be leaving London on a brief visit to his country on September 3rd next, and it may be expected that, should occasion arise, he will employ his shrewd intelligence and undoubted influence towards arranging these or any other controversial matters between the neighbouring Republics.

Business Notes.

The Railway Deficit.—The results of railway working for the three months ended June 30th, published by the Ministry of Transport on Wednesday, show an excess of revenue over expenditure for the quarter amounting to £358,240. Total revenue earned was £60,496,314, towards which passenger train traffic contributed £27,174,626, and goods train traffic £33,321,688. For the month of June expenditure exceeded revenue by £318,587, maintenance and renewal of way and works, and traffic expenses being proportionately higher than in the two previous months. The net Government liability for the three months works out at £10,926,760, of which £4,033,587 is in respect of June.

The Company offers the services of its organization to manufacturers and others desirous of establishing new connections in the East and elsewhere.

The Banco Italiana del Uruguay.—This important Uruguayan bank has been granted a six months' moratorium. Its current and deposit accounts totalled over 24 million dollars at the date of the last balance-sheet, and it is said to have been ably managed, but eagerness to accommodate its customers has landed it in its present difficulties. All over the world bank customers, debauched by war experience, have yet to learn that accommodation cannot be unlimited, and the difficulty of teaching them this lesson is a source of embarrassment to bankers. The temptation to expand, by means of credits raised abroad, in order to meet their views, is considerable in a country like Uruguay, and when the credits are reduced, owing to a policy of restriction in the lending centre, the consequences are uncomfortable. It is fully expected that the suspension will be only temporary.

Stock Exchange Commissions.—A Stock Exchange correspondent writes:—It is barely a year since slight alterations were introduced into the Stock Exchange minimum scale of commissions, and the question is again before the Committee of the House with a view to charges being augmented in certain cases. Instead of $\frac{3}{16}$ per cent. on British Government securities, it is proposed to make the commission $\frac{1}{4}$ per cent. The buyer of £1,000 War Stock will be called upon to pay £2 10s brokerage, instead of £1 17s 6d, if the change is confirmed. A more important alteration is that relating to Home Railway ordinary and deferred stocks, where, in place of an ascending scale of charges, it is proposed to substitute an all-round charge of 10s per cent. on the money involved. To buy £100 North-Western ordinary stock at 80 costs 5s now; at $\frac{1}{2}$ per cent. on the money the brokerage would be 8s. Midland deferred at 51 carries 5s per cent. commission; at the new rate the charge would be exactly the same. No little conflict of opinion arose over the minimum commission on small bargains, which is 10s at present, excepting in the case of transactions under £20, when not less than 5s must be charged. Some of the Stock Exchange Committee wanted to raise the rate to £1 on all except the smallest bargains, but other members opposed this as being unfair, and in the end a compromise was reached. No bargain is to be done for less than £1, excepting where the amount involved is under £100, when the brokerage may be 10s. It was decided not to interfere with the existing rates of commission chargeable on bargains in shares, which therefore remain as follows:—

Price	£ s d		£ s d	At discretion. s d
Over	0 1 0	to	0 2 0	0 0½ per share.
,,	0 2 0	to	0 3 6	0 0¾ ,,
,,	0 3 6	to	0 5 0	0 1 ,,
,,	0 5 0	to	0 15 0	0 1½ ,,
,,	0 15 0	to	1 10 0	0 3 ,,
,,	1 10 0	to	2 0 0	0 4½ ,,
,,	2 0 0	to	3 0 0	0 6 ,,
,,	3 0 0	to	4 0 0	0 7½ ,,
,,	4 0 0	to	5 0 0	0 9 ,,
,,	5 0 0	to	7 10 0	1 0 ,,
,,	7 10 0	to	10 0 0	1 3 ,,
,,	10 0 0	to	15 0 0	1 6 ,,
,,	15 0 0	to	20 0 0	2 0 ,,
,,	20 0 0	to	25 0 0	2 6 ,,
,,	25 0 0			½ per cent. on money.

The Committee's proposals are not yet actually passed. Indeed, up to the time of writing they have not been posted in the Stock Exchange, but members get to hear about such things in advance of official announcements. Nowadays the broker practically always takes upon himself the responsibilities which the law allows him to disclaim if he cares to do so. The law, established beyond any doubt by hard-fought cases, has fixed the position of a stockbroker as being that of an agent pure and simple. In the Stock Exchange itself one member is responsible to another, but *vis-à-vis* a client, the broker can escape all liability other than that of an agent acting as a middleman between buyer and seller. Rarely, indeed, is it, however, that the broker will not hold himself in honour bound to protect his client in every possible way. Not only to buy as cheaply, and to sell as dearly as possible; that is merely business. But also in regard to dividends, rights, lost transfers, and certificates, the setting-right of countless mistakes—not all of them small—the giving of advice directly contrary to his immediate interests, the anxiety to help his client in any and every way. Experience has taught the client many a pleasant lesson of how the honourable "traditions, customs, and usages" of the Stock Exchange override the law of the land. The confidence of that client has shown itself in the way in which competition has failed time after time. How office expenses have risen since the war is only too common knowledge. It is doubtful whether clients will feel any particular cause for complaint, after the first mild grumbling, at the modest increases in brokerage which are now proposed.

Indian Currency and Exchange. — A correspondent writes:—In view of the fact that official announcements have created the impression that the measures recently taken by the Government of India are in accordance with the recommendations of the Currency Committee's Report, it may be of interest to those who are affected by the fluctuations in the rupee to set down side by side the actual wording of portions of the Report and the measures taken:—

Report.	Government Action.
Para. 87 (xii.). The Government of India should be authorised to announce their readiness to sell weekly a stated amount of Reverse Councils during periods of exchange weakness *at a price based on the cost of shipping gold from India to the United Kingdom.*	Sales of Reverse Councils at the parity of 2s sterling, which bears no relation to the parity of 1 sov = 10 rs, or to the cost of shipping gold from India to the United Kingdom.
Para. 87 (xxv.). The holding of securities issued by the Government of India in the paper currency reserve should be limited to 20 crores.	Actual holding: May 22, 1920, 28 crores July 22, 1920, 40 ,, showing an increase of 12 crores in two months.
Para 87 (xxv.). The gold in the paper currency reserve should be re-valued at 2s per rupee.	Section 3 of ordinance 3 of 1920 provides that sovs and half-sovs held in the paper currency reserve shall be valued, not at 2s per rupee, but at **Rs.15** per sov.

It is not surprising, when these discrepancies are reviewed, that the Rupee has not been fixed, and we are led to the conclusion that the administrative acts of the Government of India, far from tending to produce stability, are a disturbing factor. They now propose to submit a Bill at the next session of the Legislative Council, prescribing the new ratio of one sovereign = Rs. 10, but unless they are prepared to make this ratio effective by giving a sovereign in exchange for Rs. 10, and Rs. 10 in exchange for a sovereign to the full extent of the demand, it will have no more influence in stabilising the rupee than the measures hitherto taken, and the rupee exchange is more likely to follow the sterling equivalent of the cost in India of importing or exporting gold.

Raw Cotton Supplies.—At the beginning of this week writes our Manchester correspondent, the Agricultural Bureau of the United States Government published a report on the cotton crop, the condition on July 25th being given as 74.1 per cent., against 70.7 per cent. on June 25th and 67.1 per cent. in July last year. The statement was not quite equal to expectations, but the report indicated that considerable progress has been made in the outlook for the crop during the last few weeks. The estimated yield per acre is 170.4 lbs, as compared with 156.8 lbs last year. On the figures given, the crop is forecasted at 12,519,000 bales, which, with linters, should mean a total output of over 13,000,000 bales. Particulars are now available of the crop for the season ended July 31st, the total being given as 12,443,000 bales, against 11,603,000 bales in the previous season and 11,912,000 bales in 1917-18. It may be stated in round figures that the takings of spinners in Great Britain during the season were 3,000,000 bales, against 2,100,000 bales in the previous year, the consumption of the United States being 6,100,000 bales, or about the same as in 1918-19, whilst the takings of spinners on the Continent are given as 2,500,000 bales, against 1,520,000 bales in the previous year. Very favourable news continues to be received relating to the Egyptian cotton crop, and if there is no setback, there seems to be a probability of a yield for 1920-21 of 7,500,000 cantars. The crop for the season just ended amounted to 5,660,000 cantars, against 4,826,300 cantars in the previous year. During the past season a feature of interest with regard to Egyptian cotton has been the much bigger consumption in the United States, the shipments from Alexandria to America being 291,000 bales, as compared with only 65,230 bales in 1918-19 and 75,420 bales in the previous year. Further progress is now being made with the scheme for growing cotton on a commercial basis in some part of the British Empire. A meeting of the Lancashire committee which has the matter in hand was held at the end of last week, when it was stated that Mr Lloyd George had offered to meet the members of the committee in London in two or three weeks. It was decided, however, owing to the details of the scheme not having been arranged to a sufficient extent, to ask the Prime Minister to defer the discussion in London until about the middle of September. It is suggested by the Lancashire committee that a company should be floated with a capital of £10,000,000, to be paid up over a period of years. It must be admitted certain difficulties are being met with in launching the scheme, and it is recognised that it would be useless to enter into discussions with Mr Lloyd George until the organisations in Lancashire, which are vitally affected, are prepared to say definitely what they propose to do.

Trade Mission to the Far East.—The question of sending a trade mission from Lancashire to the Far East for the purpose of inquiring into the export trade in cotton textiles is again being considered by Manchester merchants. At a meeting held at the Manchester Chamber of Commerce at the end of last week the position was discussed, and there was some difference of opinion as to whether it was advisable for the mission to leave this country in the autumn in view of the unsettled state of affairs in the Far East generally. Ultimately it was decided to adjourn the meeting for a fortnight. Mr Thomas M. Ainscough, the Senior Trade Commissioner for India, is taking part in the arrangements, and it is understood that he will be the British Government representative in the mission. Since this proposal was first suggested the question of finance has been a stumbling-block to progress. It is estimated that the mission will cost about £18,000, and the Treasury has not been able to see its way to make a grant of more than £3,000, the suggestion of the authorities being that the remainder of the money should be found locally. There is now a probability of the Cotton Reconstruction Board devoting part of its surplus funds to this object, and it is anticipated that in this way the money will be found. It is urged that a mission of this kind should be able to secure most valuable information for the use of Lancashire manufacturers and merchants.

The Situation in Mexico.—General Villa's submission, reported last week, is not yet confirmed officially, but his forces had been much weakened, even before the overthrow of the Carranzist Government. He is stated to have given a proof of his sincerity by repairing the railroad to Eagle Pass on the Texan frontier, and to have promised to maintain order in Chihuahua and to assist in doing so elsewhere, on condition that he is allowed to retain a force of 500 men and his rank as General, and

A COUNTRY-WIDE policy of friendly co-operation with well-established, carefully chosen banking correspondents provides for Irving over-seas customers reliable and responsive sources of information and facilities of service in all the market places of America.

IRVING NATIONAL BANK
WOOLWORTH BUILDING, NEW YORK

LONDON OFFICE: PINNER'S HALL, OLD BROAD STREET

that land is allotted to his troops. Some years ago a similar provision was made for the followers of another revolutionary General, and they were so well satisfied that they declined, much to his surprise, to obey his next call to arms. The bargain is really a reversion on the part of the Provisional Government to the method of pacifying Mexico attributed to President Porfirio Diaz, who is said to have succeeded in employing the revolutionist brigands to destroy one another, and who certainly enlisted the survivors in the rural police. The Presidential and Congressional elections will be held on the first Sunday in September, and the new President will take office on December 1st. A second candidate, Señor Federico Dominguez, is stated to have been chosen by a Convention of the Conservative party; but no information is available as to its composition and programme. There seems little doubt that General Obregon will carry every State. Meanwhile, President de la Huerta is stated to have ordered the return to their owners of all properties and mines seized by the Carranzist Government, and to be preparing to return the National Railways and the Wells-Fargo Express, and to abolish the cable censorship. The sporadic disturbances reported in various parts of the Republic are apparently of no real importance; the country, as a whole, is quiet, and the oil shipments for June constitute a fresh record.

A Nitrate Amalgamation.—Circulars have been sent to the shareholders of the Liverpool Nitrate and San Lorenzo Nitrate Companies, stating that an offer has been made by the Liverpool company to absorb the San Lorenzo. If carried into effect the amalgamation will date as from June 30th last. The Liverpool company offers to give one 5s share (fully paid) in exchange for every £1 share in the San Lorenzo Company, which has an issued capital of £24,000. In 1918 the Liverpool company entered into an amalgamation with the Colorado Nitrate Company, and is in possession of property equipped with four separate nitrate making establishments, as well as other dormant grounds. The Liverpool company has now also made a conditional agreement for amalgamation with the Buena Ventura Nitrate Company, offering one 5s share for every seven shares in the Buena Ventura, together with 5s in cash for each share. The paid-up capital of the Buena Ventura Company is £63,525, and in accordance with the agreement, 9,075 Liverpool shares will be issuable, and £15,881 payable in cash. The Liverpool 5s shares are quoted at $4\frac{3}{8}$, and the San Lorenzo £1 shares at $3\frac{1}{2}$. The latter received no dividend for the year 1919.

Arthur Guinness's Profits. — An enormous expansion in profits is shown in the report of Arthur Guinness, Son, and Co. for the year ended June 30, 1920. Gross profits actually more than doubled, from £5,858,854 to £12,941,420. Excise and license duties absorbed £9½ millions—a nice little windfall to the Exchequer—as compared with £3.7 millions in the previous year. Recent years' results are summarised below:—

	Gross Profit.	Ex-penses.	Pet Profit.	Reserve, Depre-ciation, &c.	Ordin'ry Divi-dend.	Rate %
	£	£	£	£	£	
1908-9	2,218,160	1,096,522	1,121,638	280,000	700,000	14
1909-10	2,465,713	1,195,090	1,270,623	325,000	775,000	15½
1910-11	2,629,180	1,301,511	1,327,669	335,000	825,000	16½
1911-12	2,541,030	1,328,241	1,212,789	255,000	825,000	16½
1912-13	2,527,237	1,443,119	1,084,118	185,000	825,000	16½
1913-14	2,752,974	1,514,726	1,238,248	235,000	700,000	14
1914-15	4,181,655	2,721,206	1,460,449	585,000	700,000	14
1915-16	5,472,922	3,962,122	1,510,800	531,000	800,000	16
1916-17	4,920,287	3,014,157	1,906,129	235,000	800,000	16
1917-18	4,105,393	2,083,307	2,022,086	235,000	800,000	16
1918-19	5,858,854	3,808,174	2,050,680	285,000	800,000	16
1919-20	12,941,420	9,677,513	3,263,907	735,000	1,000,000	20

Excess profits duty and corporation profits tax necessitates an allowance out of profits of £1,025,938 (the former required £541,123 a year ago), so that, with income-tax thrown in, the Exchequer apparently received in respect of the past year something near £11 millions from this one company. Reserve and depreciation is allotted £735,000, against £285,000, and, in addition to the 12 per cent. dividend, the ordinary shares receive an 8 per cent. bonus, free of income-tax, against 12 per cent. and a 4 per cent. bonus last year. The balance carried forward is raised from £192,549 to £237,934. The balance-sheet, which is analysed in the usual column, shows creditors over £2 millions higher, while property and stocks are up by £1,846,843. Cash and investments together are £690,808 lower. No comment is made in the report of the influences contributing to the great increase in profits.

International Mercantile Marine. — The report for the year 1919 of the International Mercantile Marine Company, which comprises the American, Red Star, White Star, Atlantic Transport, Dominion, and Leyland Lines, shows a "net result" of $17,062,912, an increase of $5,569,838 as compared with the previous year. The gross earnings of the I.M.M. and its subsidiaries, after providing for British excess profits duty, amounted to $86,603,021, and expenses to $62,005,213. Interest on bonds required $2,309,232, and $5,225,664 was deducted for depreciation on steamers. The net profit, converting dividends from subsidiary companies at the current rate of exchange and before deducting depreciation, was $17,749,932, as compared with $12,940,537 for 1918 and $15,475,986 for 1917. The depreciation for 1919 is $4,583,818, leaving a surplus of $13,166,114, to which has to be added the balance of $30,561,058 brought forward from 1918, giving a total of $43,727,172. During the year dividends total-

ling 26 per cent. were paid on the preferred stock, leaving 47 per cent. of arrears still unpaid. These absorbed $13,448,630, leaving $30,278,542 to be carried forward. The fleet owned or controlled by the company now amounts to 1,013,993 tons, and a further 267,300 tons were under construction and ordered at June 30th last. The property item, including investments in other companies, stands in the balance-sheet at $173,264,865. The preferred stock stands at $51,725,500, and the common stock at $49,872,000.

UNITED STATES.—DEMAND FOR LONG-DATED LOANS—NEW ISSUES.

(FROM OUR CORRESPONDENT.)

NEW YORK, July 23.

THE entire security market during the last two weeks, with the exception of stocks, showed a much better tone, that included a very keen demand for all new issues and a general marking-up of municipal securities, particularly the long-time loans that have been so scarce in this market since rates ranged around a 6 basis. Practically all the municipalities that have borrowed money during the period of high rates have borrowed on short-term issues. While the demand for this type has been very good, the majority of buyers are seeking the longest terms for their funds that can be found, with the result that the market is temporarily bare of this type of offering.

British and French Treasury bills were both issued at the prevailing rate of 6 per cent. and 6½ per cent. respectively, while a number of newer long-time foreign issues have been listed on the Stock Exchange, and trading greatly facilitated thereby. The Swiss 8's brought out last week at par are selling freely around 103, with a similar advance on the Kingdom of Belgium-five-year 6's.

Among the new issues under consideration is a $50,000,000 loan to Japan, which is being discussed at the moment by the Morgan group. Considerable interest is taken in this issue, and there is much speculation as regards the offering price. Imperial Japanese first and second 4½'s and the 4's of 1931 are all ruling around a 10 to 11 per cent. basis, so that it is generally believed that a new issue to be sold in competition will have to have a very fancy price so far as yield is concerned.

The Pan-American Petroleum and Transport Company issued $10,000,000 10-year Marine Equipment 7's at 94½, on which the books were closed 24 hours after the opening with a considerable over-subscription. The loan is redeemable as a whole at 105, and is secured by a first mortgage on a fleet of 10 steel tank ships of over 100,000 tons capacity at a rate of about $100 per ton. The bonds may be converted into class "B" common stock at $145 a share at any time on the option of the holder. This loan and one or two municipal issues, including $5,000,000 Philadelphia 5's, retailed at 101¼, and $2,000,000 State of Oregon 4½'s, retailed on a 5.40 basis, include the most important of the new flotations.

RUSSIA.—NATIONALISM AND CENTRALISATION—INDUSTRIAL POLICY—PRODUCTION—PRICES——CURRENCY.

(FROM OUR CORRESPONDENT.)

BERLIN, July 30.

THE Foreign Minister, Dr Simons, a cautious and Conservative-minded man, this week made a considerable stir in the Reichstag by complimenting the Soviet Government on its achievements towards restoring the national economical system. His remarks provoked a controversy, friends of Bolshevism assenting, and enemies citing the Soviet's own admissions as to industrial inactivity, demoralisation, decay, and starvation. Both sides seem to be in the right. The economic decay is not disputed by the Bolsheviks themselves, though they put it down partly to the Romanoff and Lvoff-Kerensky inheritance, partly to their own admitted mistakes, and partly to the wars waged on them by former allies during the past two years. But there seems to be little doubt that they show quite as much vigour and ability in industrial and agricultural reforms as Dr Simons implied. The conflict with Poland is in itself proof; for it is quite as much an industrial-technical enterprise as was the Great War. The red *Rabotchi Golos* of July 4th publishes an article by Bucharin, making the curious point that the blockade has helped Soviet industry quite as much as the attacks on Russia from North, South, East, and West have helped Soviet militarism. "Russia," writes Bucharin, "wanted discipline both for peace and war. The blockade by starving and ruining our people gave us the same moral justification for hard industrial discipline as the Koltchakist, Denikinist, English, and Japanese attacks gave us for restoring the old army's disciplinary methods."

Bolshevik utterances and actions since I last touched this subject in April have been ever more confident, opportunistic, and anti-Bolshevik. Constitutionally, the essence of Bolshevism is decentralisation. The ideal Bolshevik Russia was a loose alliance of local Soviets; but the plan of Lenin and a handful of magnates, all at Moscow, to militarise both red militia and red industry could not be executed by way of fifty provincial and any number of district Soviets, all controlled by incompetent visionaries and uncompromising fanatics. So at the third congress of Soviets, Lenin proclaimed for the entire abolition of the Soviet institution. The Soviets, said Lenin, ruin Russia; the workmen must learn to imitate the foreign bourgeoisie, who keep on top because they practise personal rule. The new industrial militarisation runs on Lenin's new, not his old, principle. This month, the president of the Soviet of Orel (a province important because the local Briansk workshops turn out railway and war material) was removed from office (in defiance of the Soviet constitution) "because of lack of decision shown during disorders by women labourers." The Soviet Press is full of such actions. Inconceivable two years ago, they prove to-day the great progress made towards centralised government. Their purely economic fruits are hardly yet ripe. Rykoff, president of the Supreme Council of National Economy, told Moscow in June that "the new system of industrial dictatorship is no more productive than was the industrial anarchy of 1918" (when each factory council did as it liked). This being so, and as the rigid State control of production and the practical replacement of money by payment in kind do not allow of appeals to self-interest, the Soviet rulers have no alternative to coercion except enthusiasm; and so, side by side with fines, imprisonment, and internment in labour camps, flourishes a growing organisation of voluntary help. First in early May, and ever since, have been held Labour weeks and Labour days, during which volunteers repair railways and houses, turn out farm implements, and load and unload goods trains. In Smolensk, just behind the front, is the organisation "Free Labour" (*Svobodni Trud*), which voluntarily, gratis, and after working hours, makes uniforms for the army; and in the same Smolensk (*Pravda*, June 17th) is the Third Shirkers' Camp, which makes uniforms with equal industry and probably less zeal. One sees how Bolshevism has shed principles. But when fidelity fits exigencies, Moscow is as Bolshevik as in its youth. On June 23rd, it confiscated all jewellery in private possession; and a day later it decreed abolition of

pawnshops as "a bourgeois institution," and expropriated the contents. In this week, for the sake of children, it decreed compulsory delivery of milk. In July, it furthered the interests of education by commanding all illiterate adults to attend school, and decreeing that after a year from now documents signed with a mark will be invalid. In Moscow, it borrowed all overcoats (to be returned when the Red Army comes home). This may be Bolshevism. But when Petrograd citizens refused to repair their broken windows and doors on the ground that they might any day be dispossessed, out came a decree giving permanent tenant-right to those who did repairs. This is a flat repudiation of Bolshevik doctrine and law. The results of this opportunist system are good. Although general conditions have indeed got worse in the last half-year, and probably are still getting worse, there is unquestioned improvement in some matters; and civilians and military are better supplied with certain commodities than at any time since 1917.

Prices rise rapidly. The Council of National Economy reports that since July, 1919, prices in free sale have risen seventeenfold. Boots now cost up to 47,000 roubles a pair, and men's suits up to 120,000 roubles, glass 7,500 roubles a square metre, and hardware goods about 5,000 roubles a lb. Butter in Petrograd costs 3,000 roubles a lb, and bread 400 roubles. The high prices are mostly the result of the inflation, but partly of official corruption—the bureaucrats (*cf. Rabotchi Golos*, June 12th) steal food requisitioned for rationing, and sell it at high prices to persons who have not got their full rations. In the currency, innovations are the printing of a new series of Soviet notes, varying between 100 and 10,000 roubles in value; and of yet another series which are printed in blocks like postage stamps. The values of "Duma," "Kerensky," and "Soviet" notes have fallen heavily as compared with "Tsar" notes, independently of whether the last were printed under the monarchy or by any of the subsequent Governments. The notes in circulation have practically ceased to be currency. The new notes issued (about 3,000,000,000 roubles a month, says *Ekonomitcheskaya Zhizn*) are really requisition notes, which are given to citizens as receipts for delivery of supplies; but they have practically no money value to the recipients, who must either produce everything for themselves or rely upon State food, clothing, and other cards. Hence Finance Commissary Krestinsky's ideal, proclaimed two years back, of "automatic devaluation of the rouble" has been very nearly attained.

AUSTRIA.—THE DEFICIT—NEW TAXATION—THE CAPITAL LEVY.

(FROM OUR CORRESPONDENT.)

VIENNA, July 27.

THE fiscal year ending on June 30th showed a deficit of more than 10 milliards of crowns, the revenue amounting to 6 milliards, whereas the expense exceeds 16. But there can be no doubt that the actual deficit will exceed the calculated one. There are two ways to remedy public finances: increasing the revenue, and diminishing the expense. As there are new elections to take place before long, the National Assembly, being anxious not to incur the displeasure of the different classes of society, did not venture to retrench expenditure. The new-voted supply consists of indirect duties amounting to about 600 million crowns a year and direct taxes amounting to about 400 million crowns a year. At the same time, the Bill concerning the levy on capital has passed the National Assembly. The levy on capital figured as one of the chief points of the Social-Democrat platform, as this party hoped the vital conditions of all classes of the population would be equalised by such a measure. As the elections are to take place in autumn, the second Government party, the Christian Socialists, did not venture to disprove the arguments of the Social Democrats. Finally, the two parties having agreed to a compromise, a law was enacted which, as it gives the option of distributing the payments over a long term (from three to 20 years), cannot be called intolerable or revolutionary. The rates for individuals are very intricate, as they take into consideration the different social conditions. The following statement may give an idea of the rates:—

On a capital of crowns:					
100,000	is	to	be	levied	4·30 per cent.
500,000	,,	,,	,,	12·50	,,
1,250,000	,,	,,	,,	18·60	,,
5,000,000	,,	,,	,,	33·00	,,
10,000,000	,,	,,	,,	43·60	,,
15,000,000	,,	,,	,,	50·70	,,
150,000,000	,,	,,	,,	65·00	,,

Foreigners residing in Austria for the purpose of earning their livelihood within its territory have to pay the levy after having stayed there for a term exceeding three years; whereas such foreigners as reside in Austria without earning their livelihood within its territory have to pay the levy after having stayed there for a term exceeding five years. Foreigners not residing in Austria have to pay the levy for landed property, factories, and such other profitable concerns of their own as are situated in Austria. Joint-stock companies have indiscriminately to pay a levy amounting to 15 per cent. of the value of their total of shares. The average between the common value of the shares (which they were sold at during recent months) and their interest value is to be the value of the shares for the purpose of the levy. The interest value is equal to such capital as would—at 3.5 per cent. interest—within three years bear as large a sum as the total of dividends yielded by said shares during the years 1917 to 1919. The levy on shares has to be paid as well by Austrians as by foreigners. Joint-stock companies may pay their levy by gratuitously placing a corresponding number of shares at the Government's disposal; the Government then is entitled to sell the shares thus received, whereupon the company is considered to have paid its levy.

ITALY.—THE ASSAULT ON BANKS AND A BANKING WEEK.

(FROM OUR CORRESPONDENT.)

TURIN, July 31.

THIS week may be called the banking week. Parliament has been busy with banking discussions, and newspapers were overflowing with banking articles. Nine-tenths of speeches and articles were mere rubbish, as may be easily expected from the technicalities of the matter and the widespread incompetence of speakers and leader-writers. The gist of the problem is this: the Italian banking evolution has been somewhat different from English and German ones; we have not banks of the pure classical species as you have in England, but also the banks of the German type are by no means exclusively dominant. At June 30, 1919, the sum total of deposits (saving and current account deposits) was 17,435 million lire, which were thus distributed among the various types of banking institutions:—

	Lire.
Issue banks (Bank of Italy, of Naples, and of Sicily)	774,5
Ordinary banks (in the English sense)	3,447,6
Popular banks	1,423,7
Other co-operative banks	1,237,3
Savings banks	5,589,2
Postal savings banks	4,223,7
Banks annexed to pawn-offices (*Monti de Piété*)	457,4
Rural banks	281,9
	17,435,5

As you see, the distribution of deposits is very various and wholesome. The ordinary banks, of which the foremost are the Banca Commerciale, the Credito Italiano, the Banca Italiana di Sconto, and the Banca di Roma, do not absorb more than a fifth of the Italian deposits. The other four-fifths are distributed between co-operative banks (popular and others), which cater for the medium-sized and little traders, enterprisers and agriculturists, rural banks which have their customers in the world of little farmers, savings banks (among whom may be counted powerful institutions with deposits amounting to hundreds of millions), which are public local institutions and make loans to public bodies and discount commercial paper of very high standing, and give loans on collaterals. There are finally the postal savings banks, which are opened by the State in every town—one may say in every hamlet—in Italy, and whose deposits are managed by the biggest Italian bank-

ing institution, very little known to the public, the Cassa di Depositi e Prestiti. The Cassa is a State bank, which is a sort of trustee of saving banks deposits and of the funds of other public institutions, and makes loans to provinces, municipalities, and public bodies, besides investing large sums in State Rentes and Exchequer bills.

The banking world in Italy is thus vary varied, and one may have very little fear that a good customer, whether private or public, may find himself cramped by a refusal of credit in consequence of a combination of banks. The co-operative and public banks are so predominant that even if the four big ordinary banks were united in a banking trust, credit could not be wanting to honest, independent men. The peculiar distribution of deposits has had another consequence: that the ordinary banks, and especially the big four, whose names I have above quoted, have had a keen competition to face in the discount of good mercantile papers and in loans for collaterals. The more so as in Italy lives, and vigorously lives, a number of private banks, which do not publish their accounts, and which have a well-tried *clientèle*. Especially in Turin, the private banks have a well-earned and time-honoured standing. The big four were, almost by force, insensibly coerced to seek means for employing the funds they had at hand in operations different from the classical discount of commercial paper and loans on collaterals. They ventured on buying shares and debentures of joint-stock companies; they made loans for a long series of years to industrial and commercial companies and firms, giving thus fixed, and not only circulating, capital; they were underwriters to public and private issues. As in Germany, though not to the same extent, industry became intermixed with banking; and on the board of numerous industrial companies were sitting banking men. At the head of the big four are some of the very ablest business men of Italy; and they soon exercised an effective control over some of the biggest industrial Italian companies. This was an evolution which may have seemed natural, and would hardly have been noticed if it were not for a counter-evolution which set in during the war. The banks controlled some industries; and the industrial leading men began to desire to control banks. Signori Perrone, the heads of a great engineering firm, after having acquired a preponderating interest in the Banca Italiana di Sconto, desired to interest themselves in the Banca Commerciale Italiana, and in a short time bought 200,000 shares out of a total of 520,000 shares issued. This event made other great captains of industry fear that, little by little, Signori Perrone may extend their control from the Banca Italiana di Sconto to other ordinary banks, and so monopolise the greatest part of the three billions and upward of deposits. A counter-move was made by Signor Aguelli, head of the Fiat, the well-known motor-car company, and by Signor Gualino, which sought to acquire control of Credito Italiano. The menaced boards of the two banks, Commerciale and Credito, took alarm, and after a long race in acquiring a majority of shares, they endeavoured by issue of new shares to assure to themselves and to their friends the independence from too big customers desiring to acquire control of the banks. At last a compromise was effected. Signori Perrone sold their shares, and two trusts were created, which are holding the majority of the shares of the two banks. The trustees are friends of the boards of the banks, and it is hoped that they will exercise their right of vote in the interest of the independence of the banks from their customers. This compromise was arrived at in March last, Premier Nitti and Minister of Industry Ferraris aiding to reach the result, which, to sum up, must be deemed useful to the wholesomeness and independence of the banking functions.

This almost forgotten story was revived with an unheard-of violence of language and of political passion in the past and present week. The Socialist papers took up the matter of the assault on banks as a means of discrediting all bourgeois institutions. Partisans of the present Premier, Signor Giolitti, see in the topic an excellent weapon for discrediting ex-Premier Nitti. Accusations of all sorts were made of bribery, corruption, German intrusions, hundreds of millions lire extorted during the various buying processes and issues of shares to little shareholders, &c. Amid a great confusion of words and looseness of ideas, the Chamber of Deputies voted the principle of an exhaustive inquiry into bank management and banking shares manipulations. We shall see if some good will come out of this so-called scandal.

CANADA. — CROP REPORTS AND CONDITIONS — WHEAT CONTROL—THE FARMERS' ATTITUDE—THE GRAND TRUNK ARBITRATION — WAGE INCREASES AND DEMANDS FOR INCREASED RAILWAY RATES—PREMIER DRURY AND THE HYDRO - ELECTRIC COMMISSION — CABINET CHANGES — TRADE FIGURES — GROWING ADVERSE BALANCE — INCREASE IN BRITISH IMPORTS.

(FROM OUR CORRESPONDENT.)

OTTAWA, July 23.

AT this period of the year the fate of the field crops transcends all other interests in Canada. In Eastern Canada the hay crop and pastures are light, but the grain and root crops are in excellent condition. The writer, as the result of a recent motor trip through three of the chief agricultural counties of Central Ontario, can bear personal testimony to the excellence of the crops and the satisfaction of the farmers with their prospects. In the Ottawa Valley, also, where the soil is for the most part light, the excessive rainfall of the last month is peculiarly acceptable to farmers, and the crops will be above the average. Apples, cherries, and plums promise an excellent yield, and the crop of small fruits, like raspberries, has been abundant. Quebec and the Maritime provinces have not been so fortunate in the matter of rainfall, but conditions there are very hopeful. At the end of June crop prospects in the prairie provinces were very roseate, save in Southern Alberta. Salvation came to that area in the first days of July through copious rains, which guaranteed a good crop; but disaster began to threaten Saskatchewan and Manitoba in the shape of drought. There was one cruel week of parching heat, where the temperature ranged between 90 and 100, and on July 12th 115 points in the West out of 234 queried by the Manitoba Free Press reported that rain was urgently needed to avert wholesale losses. On the 20th Manitoba reported good rains as far West as Brandon, and now a despatch from Regina states that Saskatchewan's "million-dollar rain" came yesterday, the 22nd, and from widely separated parts of the province reports are coming in of heavy rainfalls and beneficial results to the crops. As the drought undoubtedly caused serious deterioration in many areas, the claim is only made that the situation has been "eased" by yesterday's downpour, but the prices of grain have fallen in response to the news, and the probability is that a good average crop is assured for most districts, and heavy yields running up to 30 bushels per acre may be expected in certain favoured localities.

The Department of Trade and Commerce finds the condition of field crops in Canada, expressed numerically in percentage of the decennial average 1910-1919, with the corresponding condition for 1919 in brackets, to be as follows:—Fall wheat, 97 (102); spring wheat, 100 (90); oats, 100 (87); barley, 98 (91); rye, 98 (97); peas, 96 (92); mixed grains, 99 (91); hay and clover, 88 (92); alfalfa 95 (96); pastures, 97 (100); potatoes, 98 (95). A revision of the preliminary estimate of the acreage sown in crops shows that it should be increased by 1 or 2 per cent. The wheat crop covers 17,186,300, as compared with 19,126,000 acres in 1919, which is a decrease of approximately 10 per cent. There is an increase of 4 per cent. in the oat acreage. The potato crop, which is very promising, covers about 819,000 acres, practically the same area as in 1919.

Last session the Federal Government obtained powers, in face of considerable criticism and opposition from a variety of sources, to continue wheat control and the operations of the Wheat Board for another year, if necessary. It was intimated that the powers would only be used if the circumstances of the wheat market demanded it. A fortnight ago it was announced that the Government saw no necessity for the continuance of control, and felt that the marketing of the 1920 crop could be safely left to private enterprise. Accordingly, the Winnipeg Grain Exchange proceeded to resume its normal activities, which had been curtailed since 1917. The majority of wheat-growers in

the East were not enthusiastic for control, but the Western grain-growers are in the main strong advocates of its continuance. It is highly improbable that the Government will accede to their demands. So the United Farmers of Alberta have advocated through their executive the formation of a wheat pool by the Western grain-growers for the marketing of the 1920 crop through their own co-operative agencies.

The arbitration proceedings between the Canadian Government and the Grand Trunk Railway have been hanging fire for a long time, but they are now to go ahead under the auspices of a very distinguished board of arbitrators. When the necessary legislation was passed in 1919, Sir Walter Cassels, of the Exchequer Court of Canada, a very eminent jurist, was selected as chairman of the board. Now the Government have nominated as their representative Sir Thomas White, who refused the Premiership a fortnight ago, and the Grand Trunk have secured the services of no less a person than ex-President Taft. A board of this calibre should command the confidence of all parties. A huge amount of data concerning the condition of the various roads has been collected, and the investigations of the experts, which were necessary, have been practically completed. The real work of the arbitration will probably begin in Montreal in September, but an award need not be looked for till the spring, or even the summer, of 1921.

The Grand Trunk directors and shareholders can take some comfort that they are escaping many troubles. It is practically certain that within the next month the C.P.R. and the Canadian National system will put in force new schedules advancing all their workers in stations and shops about 21 per cent. on their existing wages. This increase means a serious disturbance of the whole basis of railway finance. Early in July the Canadian railways filed an application with the Board of Railway Commissioners for an all-round increase of 30 per cent. in freight rates. The Board have been making arrangements to hold sittings throughout the Dominion to hear parties for and against the increase, and the three prairie provinces are preparing to resist the demands. But now railway officials state that, as a result of the last wage increase, a 30 per cent. addition to their freight rates will be insufficient to meet their needs, and they may ask leave to amend their application and demand a higher figure.

The trade situation is now challenging serious thought. During the war our export figures were stimulated by vast shipments of munitions and food supplies to feed and equip our own and other armies, and the adverse trade balance of pre-war days disappeared. But since the armistice the position has gradually changed, and with export figures showing a grave decline, the promise is that at the end of the year Canada will have a large debit balance in her foreign commerce. There are other causes for the situation besides the cessation of the war. The state of the European exchanges makes it highly impracticable for Europe to purchase many Canadian goods, and Canada is unable to maintain credits on any large scale for European nations. The credits to Belgium, Roumania, and Greece are not quite exhausted, and may be used to a slight extent during the rest of the year. But when they come to an end there is no prospect of additional provision. This course would necessitate a further large domestic loan, and the Finance Minister is anxious to avoid this. How heavily trade is beginning to turn against us may be seen from the quarterly returns for the last four years for the period ending June 30th, which are as follows :—

	Imports.		Exports.
	$		$
1917	291,919,000	..	330,488,000
1918	251,391,000	..	258,673,000
1919	200,615,000	..	244,096,000
1920	346,303,000	..	237,236,000

Thus a balance of $39,000,000 in our favour in these three months of 1917 has become an unfavourable balance of $109,000,000 in 1920. For the calendar year the decline of exports month by month has been as follows :—

			$
January	Favourable	balance	17,939,222
February	,,	,,	2,860,482
March	Adverse	balance	44,278,364
April	,,	,,	42,420,136
May	,,	,,	33,129,560
June	,,	,,	26,197,400

THE MERCANTILE BANK OF INDIA, LTD.

Head Office : 15 Gracechurch St., London, E.C.3

Capital Authorised	£3,000 000
Paid Up Capital	1,050,000
Reserve Fund and Undivided Profits	1,146,430

Branches :

INDIA, BURMAH, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.

On **Current Accounts** interest is allowed at 2 per cent. per annum on daily balances.

From the British point of view, there is one satisfactory feature. Imports from the British Isles show a marked and steady increase, particularly in the textile lines. In the year ending May 31, 1919, British exports to Canada totalled only $79,000,000, but in the year ending May, 1920, they have been more than double, amounting to $159,000,000. But the success of the Western crop is more vital than ever this year. If there were available for export 200 million bushels of wheat, the situation would be materially improved.

Manufacturers and wholesalers report that trade is improving, but business in many centres is still quiet, and orders will not begin to flow freely till the harvest begins. The stock markets have been dull. Even the prosperous paper stocks had a setback a week ago, when some of the strongest dropped several points. They have now rallied, but there is a feeling abroad that the " paper " boom has reached its peak.

JAPAN.—SIX MONTHS' TRADE—EXPANSION AND ADVERSE BALANCE—FINANCIAL SITUATION.

(FROM OUR CORRESPONDENT.)

TOKYO, July 5.

JAPAN's foreign trade during the past six months reveals some remarkable features. In spite of unprecedented expansion and a tendency to panic in economic circles, the adverse balance, which began before the first of the year, steadily persists, until the total for the half-year is now 447,105,000 yen, or twice as much as for the corresponding period of last year, when the adverse balance was only 221,028,000 yen. At the same time, the nation's foreign trade for the half-year has witnessed remarkable extension, in exports as well as imports. Exports for the period totalled 1,138,433,000 yen in value, with 1,615,538,000 yen for imports, the former representing an increase of 311,200,000 yen and the latter 567,300,000 yen over the same period of last year. Along with this expansion of trade, it will be seen that the excess of imports over exports also represents an increase of about 115 per cent. compared with the same period of 1919. The situation may be briefly tabulated thus :—

	January to June—		
	1919.		1920.
	Yen.		Yen.
Exports	827,157,000	....	1,138,433,000
Imports	1,048,185,000	....	1,615,538,000
Adverse balance	221,028,000	....	477,105,000

The following table will show some of the more important increases during the half-year as compared with the figures for the first half of last year :—

EXPORTS (January to June, 1920).

	Amount.		Increase.
	Yen.		Yen.
Refined sugar	24,254,000	....	16,271,000
Raw silk	256,235,000	....	60,191,000
Cotton yarns	72,165,000	....	10,646,000
Silk fabrics	99,235,000	....	51,424,000
Cotton cloth	184,559,000	....	46,706,000
Toys	10,912,000	....	7,141,000

IMPORTS (January to June, 1920).

Beans	35,325,000	....	17,567,000
Sugar	39,114,000	....	18,095,000
Skins, hides, &c.	15,487,000	....	9,127,000
Cotton (raw)	604,500,000	....	226,733,000
Chilean nitrate	21,233,000	....	12,582,000
Wool	105,515,000	....	68,041,000
Oil cakes	117,689,000	....	47,398,000
Iron bars, rods, and plates	107,919,000	....	38,089,000

Japan's trade for the month of June shows the same trend, the total for exports amounting to 183,407,000 yen, an increase of 32,512,000 yen over the same period of last year ; while the total for imports stood at 218,317,000 yen, which was an increase of 43,282,000 yen over June last year, leaving an unfavourable balance for the month amounting to 34,910,000 yen.

The economic situation in Japan continues critical, not so much in a national as in a business sense where individual firms are mostly concerned. The reckless speculation of the last two years is marked by a sudden decline with the decrease of specie inflow, the tightening of money, and the high cost of production. During the month of June no more than 130,000,000 yen was put into new concerns, this being 136,000,000 yen less than the previous month, while only 59 new companies were promoted and three partnerships organised, involving a total capital of only 48,000,000 yen, a decrease of 104,000,000 yen against May. The figures for May and June, compared with those for the earlier months of the year, show the extent of the financial panic in its operation against promotion and speculation, for the total capital employed in promotion during the first half of this year amounted to 5,404,237,750 yen, which, in spite of the increasing depression, shows an increase of 4,265,097,750 yen over the same period of last year ; but the bulk of this capital saw movement during the first three months of this year, when speculation was at its height. With the decline in speculation and company promotion failures increased rapidly, 134 companies and banks going into liquidation in June, an increase of two over May. The total authorised capital involved in these concerns amounted to 56,155,855 yen for June, an increase of 26,322,009 yen over that involved in the failures for May, and of 36,793,185 yen over May last year. Money is still tight, but the situation is regaining stability.

HOLLAND.—LEVER BROTHERS, LIMITED—CAPITAL MARKET—LIQUID DEBT—OFFICIAL CALCULATIONS.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, July 15.

LEVER BROTHERS, LIMITED, have now borrowed 33,000,000 fl in the Dutch market—viz., 3,000,000 fl in November, 1916 (5½ per cent. bonds, redeemable November next year), 10,000,000 fl in September, 1919 (6 per cent. bonds, redeemable October, 1925), and a week ago 20,000,000 fl 20-year 7 per cent. bonds. This last issue—like the previous ones—seems to have been a great success. At the same time, the interest on the 6 per cent. bonds was raised to 7 per cent., a very liberal measure towards the holders of these bonds. In order to prevent money from flowing abroad, a Bill was passed in 1914 submitting all new issues to the consent of the Finance Minister. Without his approval, the official quotation could not be obtained. Nevertheless, the Lever issue was launched, and investors seemed not to care for the official quotation. The bonds are regularly dealt in in the unofficial list, and the 7 per cent. bonds stand at a premium.

In the first half-year new Government, provincial, and municipal loans were issued aggregating 485,000,000 fl. Moreover, 305,000,000 fl were raised for private enterprises, making together 790,000,000 fl. In the first week of July new issues totalled 55,000,000 fl, and still the boom continues.

The liquid debt of the Government was at the end of the first week of the previous month 715,000,000 fl. Advances to the colonies amounted to 164,000,000 fl, and the instalments paid on the compulsory loan of 450,000,000 fl aggregated 416,000,000 fl, so that, in fact, the balance of the liquid debt was 135,000,000 fl.

A queer instance of official calculation is that when the compulsory loan of 450,000,000 fl was launched the expectations were that this sum would be surpassed. The excess was to be utilised to buy back in the open market the bonds just issued, which had fallen back some 10 per cent. below the issue price—a profitable transaction, in fact, for the Government. A mistake, however, seemed to have been made in the calculations, and the total amount of the subscriptions will be about 427,000,000 fl, or 23,000,000 fl less than anticipated.

SWEDEN.—SLOW IMPROVEMENT—DEMAND FOR IMPORT DUTIES—A MINING DEAL.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, July 29.

IN the financial outlook there is nothing remarkable to report, although signs of a slow but steady improvement are not wanting. The last State bank report indicates that the circulation of notes has decreased by 17 million kr during the third week of July, the reserves having increased by a corresponding amount to 98.4 million kr. Although July is generally considered as the slackest month of the year a certain liveliness has prevailed of late on the Stock Exchange, with a considerable slump in almost all values. This is undoubtedly due to the fact that many speculators have come to grief by the high rates of interest for loans, and have been forced to sell off. A strong movement was started some time ago by several industrial organisations here, advocating emergency steps to be taken in order to protect the home industry by means of restrictions in imports and the dispositions of foreign values and by increased import duties. The matter was referred to the Board of Trade, who, however, found no occasion to support it. In the first instance, the statistical material available at present is considered insufficient for judging whether definite steps should be taken to restrict imports, and, secondly, the Swedish Diet has already had before it several proposals for the increase of import duties, the question of which are still the subject of careful investigations by a special Customs and Commercial Treaty Committee, and until the latter has finished its work nothing should be undertaken in the proposed direction. Recently a large deal was reported in the mining industry, the A.B. Mellansvenska Malmfälten having acquired the Idkerbergets iron ore claims from the Gruf A.B. Dalarne, a company which is actually owned by the large firm Possehl, of Lübeck. The ore in the Idkerbergets field contains 64-65 per cent. iron, and the output is about 100,000 tons annually.

Letters to the Editor.

A NATIONAL FISCAL INQUIRY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Mr Clark's letter in your issue of July 24th needs little answer from me, inasmuch as the answer is already made in the columns of the *Economist* itself (including the issue publishing his letter). Articles and correspondence, beyond count, show (1) that there are a number of public financial problems of which there is no settled or agreed solution ; (2) that the Government, which controls policy and machinery, can alone deal with such matters as taxation, public expenditure, borrowing, and redemption of national obligations.

It is idle, therefore, to utter truisms advising us (as your correspondent does) " to produce more and consume less "—excellent advice, but no remedy for the inefficiency of Government Departments, which Mr Clark deplores and would like to " forget." We cannot blind our eyes and " forget the Government," as your correspondent wishes, for the action and policy of our rulers will save us or ruin us, according to their wisdom or unwisdom, whatever may be the labours or economies of private individuals.

Public opinion, however, can control Government policy and action ; but, unfortunately, that opinion is now confused and bewildered by the inconsistent and overlapping reports of previous Inquiries and Committees. Questions have been dealt with by bits and scraps ; they have been considered, in the main, by officials and politicians ; in some cases by balancing numbers on each side of persons already pledged to certain views, and in few cases only by men of known weight and experience. That is why they have apparently had no influence with the Government, nor given driving power to public opinion.

What is wanted is to get clear views on reasoned and certain lines on such questions as the proper method of dealing with the unfunded and external debts ; the proper proportion between direct and indirect taxation ; the effect

of our present system on saving and the supply of capital; and the balancing of expenditure and revenue, including a rigid examination of the policy and heads of new expenditure.

The expression of reasoned opinion from practical men killed the war wealth levy; on the constructive side such men have still good work to do in giving or weighing evidence.

If, as Lord Inchcape wisely says, a State should, as an individual, guide its spending policy by its means, we ought to have an impartial audit of public assets and liabilities. Official administrators (whose competence in their own sphere no one questions) cannot be expected to do this—for the sufficient reason (amongst others) that the immensely extended sphere of their daily routine work must absorb fully their time and thought.—Your obedient servant, NICHOLAS J. SYNNOTT.

Furness, Naas, Co. Kildare, July 28th, 1920.

THE QUESTION OF CREDIT.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Your correspondent, Mr Albert Wallis, imagines that he has discovered a fundamental difference between the financial theories advocated by me and those set forth by my friend, Mr T. B. Johnston, in his recent letter which appeared in your journal a few weeks ago.

This remarkable discovery is wholly due to your correspondent's own imagination, which prompted him to read into my letter something I neither wrote nor implied. What I wrote was as follows:—

"There are two remedies for high prices; the one is the sane policy of increasing the output of commodities, so that the disproportion between purchasing power and goods is levelled up, and the other is the suicidal policy of cutting down the volume of purchasing power. The latter process means not only reducing the demand for commodities directly, but it also means reducing the supply. In other words, deflation involves starvation!"

This, says Mr Wallis, "seems to imply that the present purchasing power is much in excess of the output of goods." And then he quotes Mr Johnston as saying that "currency has for 70 years past been quite inadequate to meet the needs of growing production," and he concludes as follows: "Mr Johnston wishes to keep prices up by an adequate flow of currency notes, while Mr Kitson's sane wish is to bring prices down by making production outrun the flow of notes."

I have read many criticsims during my time, but I have never met anything that is quite so unfounded as this criticism of your correspondent. I have never even suggested any such conclusion as that stated by Mr Wallis. On the contrary, I have all along maintained that the supply of legal tender during the war has failed to keep pace with the volume of credit which it has had to support. The ratio of debt to legal tender is to-day far greater, and consequently our financial stability is far more precarious, than in pre-war times. My contention is that the policy now being pursued by the Treasury officials and by certain international financiers of contracting the currency supply without any corresponding reduction in the volume of debt, is as dangerous a proceeding as it would be to dig away a part of the foundation of St. Paul's Cathedral without reducing the superstructure. And I venture to predict that if this policy is continued, we shall witness one of the most terrible periods of industrial stagnation and of unemployment that this country has ever witnessed.

Again, what justification has your correspondent for calling Mr Johnston and me inflationists? Inflation, I take to mean an excessive supply. When and where has such a policy been advocated? If the advocates of a scarce and costly currency honestly believe they are supremely right, why is it necessary for them to distort and misrepresent the views of their opponents? To talk of a currency as being "inflated" with the bank rate higher than it has been for a century (with but one or two exceptions), and when enterprise and industry are being checked through lack of financial facilities, is to talk utter nonsense! From the standpoint of the national interests, the really dangerous inflationists are those people such as the "Sound Currency Association," who, by endeavouring to contract the money supplies, are inflating the mountainous burdens of debt with which this country is afflicted, whilst the truly sane "deflationists" are those like Mr Johnson and myself, who are striving to increase the means by which these burdens may be satisfactorily reduced and eventually got rid of. Mr Johnston is quite correct in saying that the supply of currency since the Napoleonic wars has failed to keep pace with the demands of trade and industry. This can easily be shown by the statistics of unemployment.

I challenge Mr Wallis, or any other advocate of the gold standard, to offer any satisfactory reason for the continuous condition of unemployment in this country during all this 70-year period, except the lack of financial accommodation to which Mr Johnston refers. In a country where all the prime factors of production have been abundant, we have had myriads of our population continually on the verge of starvation chiefly because of our restricted currency system, which has deprived the public of the means for utilising these factors to their fullest extent, and consequently the effective demand for goods has never kept pace with the natural demand.—Yours faithfully, ARTHUR KITSON.

Stamford, July 29th, 1920.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I see that in reply to my letter on the above subject Mr Johnston is anxious to assure you that he agrees with Mr Kitson in thinking that the purchasing power (credit currency) should be reduced relatively to the quantity of goods by an increased production of the latter at reduced prices. But if, as Mr Johnston says, it is impossible to carry out this increased production unless the credit currency is greatly increased and made to expand automatically with the production, I do not see how Mr Kitson's levelling up of purchasing power and goods is ever to take place.

If, on second thought, Mr Johnston does really think that a more liberal flow of currency notes would bring about a sane reduction of prices, it does not seem very probable that the Bank will feel able to extend advances or issues of currency on the security of goods sold while those goods are likely to fall greatly in price.

It seems much more likely that an extended issue of paper currency would mean a further depreciation of that currency—a fact that would not increase the confidence of the Bank or encourage the extension of credit. So far, your correspondents have quite failed to show why such further depreciation should not take place, or why an increased issue of currency should make banking facilities more easy. It seems to some of us that it is just this depreciation that has led to a threatened restriction of credit. The fact of the gold (commodity) basis of value being virtually suspended has enabled producers to put up prices to cover all increases of wages. This they could not do while a gold standard was strictly enforced, because the price of gold (payable in gold) cannot be raised; and therefore, if commodity prices are too high, gold production will not pay, and the supply will fall off.

The release from this gold check is probably what Mr Johnston means by the "source from which wages are obtainable"; but such ever-rising wages may have very undesirable results. When goods are produced and passed on into the circle of exchange, the wages for them are actually paid, and very largely consumed as goods at current prices. But the share of such value produced that is left as profit may not be actually paid to its owner for some time; and, when paid, will be in the form of credit that he may not think well to realise as income for a still longer time. A good deal of such profit may have to remain as the capital with which the long intermediate stages in production are financed.

If in the interval between the making of the profit and the actual realising it as income wages and prices have gone up, such income will not only have less purchasing value, but much of it will have to go to finance the stocks and plant that are ever increasing in cost. The profit will be nominally large, because it will be expected that a higher price will be realised on the new production resulting from the inflated capital stocks. But if wages still rise, that larger profit will be again deferred, and so without end.

The fact is, the wage-earners will be getting rather more

than their usual share of the value produced, and the capitalist rather less, his profit being eaten into by the rising costs and prices while he is waiting to realise it as income. It therefore seems rather an interesting question whether this inability to realise the profits that have been made, except as stocks at very inflated values, accounts for the present shortage of money to pay wages that your correspondents complain of.—Yours faithfully,

Westacre, ALBERT WALLIS.
Station road, Kettering, August 2nd, 1920.

REDUCING E.P.D.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In view of the clamour on the burden of E.P.D., why do you not suggest to your readers to propose new taxes with a view of thereby reducing, or eventually abolishing, E.P.D.? The taxes put forward should, of course, if possible be handled by existing machinery.

I suggest, to begin with, a tax about which I have written you before—namely,

That every purchase, say, of 1s 6d and upwards (with certain exceptions) be liable to a tax of 1d stamp; the shopkeeper provides.

2nd—Why should domestic servants above a reasonable number not be taxed, say £5 for the third and £10 for every additional person?

3rd—Tax on pleasure grounds; say, £1 per acre per annum, under one acre free.

4th—Turnover tax; say, £1 per mille up to £100,000, 10s per mille over £200,000, with obvious exceptions, such as banks, &c.

5th—Face powder tax of 50 per cent. *ad valorem* (stamp tax).

6th—Fancy chocolate tax—*i.e.*, other than plain eating, 50 per cent. *ad valorem* (stamp tax).

7th—Tax on ginger ale, ginger beer, and the like; say, 1d per small bottle (stamp tax).

8th—Cycle tax of 7s 6d per annum.

9th—Piano tax of £1 per annum.

10th—Safe tax of £5 per annum.

11th—Water tax, 50 per cent. on present rates.

12th—Electricity tax of 1d per unit.

13th—Gas tax of 3d per 1,000 cubic feet.

14th—Leasehold property should be abolished, and with this in view a tax per acre should be claimed per annum.

—Yours faithfully, T. STANLEY.

Mayfield, Nether street, Finchley, N. 3,
July 30th, 1920.

Books and Publications.

THE TRIUMPH OF FREE-TRADE.

"The Triumph of Free Trade, and other Essays and Speeches." By Russell Rea, with an Introduction by C. F. G. Masterman. McMillan and Co. (London).

SELDOM are the Commons and platform speeches of a private Member on subjects of political controversy worthy of being perpetrated in book form. But the publication of this volume is justified by its first section, containing some 200 pages of Free-trade argument, and dealing with such questions as dumping, shipping, and free trade, the incidence of import taxes, the balance of trade and investment abroad, insular Free-trade, and the Chamberlain fallacies. Considering the occasions on which, and the political circumstances under which, the speeches were made, they contain less *ad hoc* argument or political filibustering than would be expected. They contain, on the other hand, much genuine and cogent economic argument, always expressed in fluent and readable form. The late Mr Russell Rea spoke with the experience of a commercial man and the burning faith of a Free-trade apostle. His faith, as expressed in this volume, even more justified to-day as before the war, should serve as a tonic to weak-kneed believers; and his facts, figures, and concrete arguments will serve as useful powder and shot to those who to-day carry on the propagation of the Free-trade gospel, in the cause of which Mr Rea in his lifetime was so ardent a worker.

SOUTH AFRICA'S CURRENCY PROBLEM.

"Currency and Exchange." By Alexander Aiken. No price or publisher stated.

THIS pamphlet, which we have received from Johannesburg, is the clearest statement that we have seen of the causes which have led South Africa into her present currency difficulties. Chief of them seems to have been the action of the banks, which, as the writer says, have, "in spite of facts which have been plain since raw gold began to fetch more than 84s per fine ounce, persisted in dealing with English currency as on a parity with gold, have been content until four months ago to keep our" (? ours) "equivalent to English." The result is that, though "the Union is more than paying its way, and although in claims requiring immediate settlement the Union is a creditor of the world generally, our currency is artificially and unnecessarily depreciated." From the banks' point of view the policy was natural up to a point; they had bought large quantities of sterling from their customers, and did not want to mark its depreciation. But the consequence is the introduction of a wholly artificial state of affairs with an embargo on gold exports, proposals for a State bank, and great danger that the position may be made worse by further inflation. Mr Aiken advocates a return to a real gold basis.

BARCELONA'S INDUSTRY.

"Historia de la Real Junta Particular de Comercio de Barcelona, 1758 a 1847." Por Don Angel Ruiz y Pablo. Pp. xi.-447. (Barcelona) Tulleres de Artes Graficas. Heinrich y Co., 1919.

THIS scholarly volume records the gallant efforts of the Barcelona merchants during nearly a century to revive and foster the prosperity of Catalonia, in spite of the economic and political decadence of Spain, and of the misguided policy of its kings. The Junta, reconstructed on an earlier pattern after five years' efforts, and always hampered by the jealousies of the Madrid bureaucrats, aided effectively in the development of the Catalonian cotton industry. Incidentally in 1764 it killed a Catalan factory in Malta, where raw cotton was plentiful, by arresting the relatives of the promoters, and holding them as hostages till the enterprise was abandoned; but it gave better help by agitating against taxing raw material, by promoting experiments with dyes, and by the institution of travelling studentships tenable abroad. Further, it planned a survey of the agriculture and production of the province, which has stopped by foreign complications; in 1763 it set up a school of navigation; later it established courses in foreign languages, shorthand, machinery, economics, this last under an enlightened Friar who based his teaching on the works of J. B. Say, and suffered for his liberalism; it provided instruction for deaf mutes; it established an art gallery, and rescued valuable paintings from disendowed monasteries, and it did other good works; but needy and centralising Governments first appropriated the port charges assigned for its support, and then abolished it altogether. The book has been produced under the auspices of the Barcelona Chamber of Commerce, and through the munificence of its President, and throws interesting and often amusing sidelights on the economic and social history of Spain.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

Ticket.	Account.
August 11.	August 12.

The broken Bank Holiday week has not brought much in the way of business to the Stock Exchange markets. So many outside factors operate to induce caution in the minds of investor and speculator alike that, apart from the holiday season, business could scarcely be expected to show any vitality. The main feature of the week is the dulness produced by the news from Russia and Poland, while the movements in foreign exchanges, the gravity of the Irish position, and vague apprehensions of dearer money are some of the causes which militate against financial enterprise. It is noteworthy that many of the new issues recently made are well supported, while the demand for good-class industrial preferences is sufficiently considerable to indicate that the public investor has by no means lost sight of the opportunities presented to him at the present time for acquiring sound stock at reasonable levels.

The War Loan is maintained fairly steadily. Trade is not sufficiently brisk to absorb money which otherwise might be going into industry, and therefore the gilt-edged stocks command the more attention upon that account. The premiums established on the latest county and corporation stocks continue to be well held, and the difficulty is to get the offer of stock in any substantial amount. The market for Home Railway prior-charge stocks is not neglected by the investor pure and simple, and the stock on offer is sufficiently small in amount to indicate the unwillingness of holders to realise unless they are obliged to do so.

Foreign bonds are naturally depressed owing to the Russian-Polish position and the vagaries of the exchanges. In sharp contrast to the flatness in most European bonds, Japanese 4½ per cents. stand out with further advances, due, of course, to the fact that the coupons on both loans are payable in New York as well as in London. Dollar securities of all kinds are much higher on the week, and American Rails have been rising rapidly. Canadian Pacifics spurted 6 points on Wednesday, fell back 3 on Thursday, and are a very fitful market.

No fresh courage has come to the Home Railway list, where prices are lower on balance. Canadian Northern Railway descriptions have moved up, though Grand Trunks weakened, in spite of the expectation that rates will be advanced in Canada. Argentines are flat, in consequence of traffic decreases and the fear lest restriction laid by the Argentine Government upon wheat exports may upset the optimistic calculations current just lately in regard to the October dividends. In Mexicans there is nothing doing, and Brazilians moved down sympathetically with Argentines.

The price of raw rubber has further receded, owing to the unexpected appearance of United States holders as sellers of the produce. Nevertheless, the share-list manages to keep up tolerably well in the face of this depressing influence, though there are a good many small declines in the list of shares. In the oil market, the quotation of Burmah Oil, ex rights, failed to stimulate any fresh activity. The liveliest spot has been Mexican Eagles, renewed buying being based on the excellent returns of the company. The rumours of a possible strike on the Mexican oilfields caused a fall from the best. Amongst other oil groups there is so little doing as to bring about a sagging tendency, and the week has been a quiet one. Shipping shares again declined, on account of the freight outlook, while in banking and insurance shares the volume of trade has shrunk to a minimum. Eastmans took a jump on the proposed sale of the company in exchange for Union Cold Storage shares. The textile market is slightly easier, awaiting a fresh lead from Manchester. The coal uncertainties are responsible for trifling falls in the market for iron, coal, and steel descriptions. Motor shares are also dull, the declines in their case being put down to the "cut" just announced by the Ford and another motor company. Marconis dwindled, although the cable group is rather better. Tobacco, Catering, Hotel, and similar groups are scarcely mentioned. Courtaulds recovered sharply after being a bad market, and reports are in circulation as to the possibilities of an early bonus being declared.

Another substantial rise in the price of gold served to attract attention to the Kaffir market, but buyers came forward in no great number, and the little improvement which occurred was swamped by profit-taking on the part of those who got in when prices were flat two or three weeks ago. Nevertheless, the Kaffir market may be described as fairly steady. De Beers moved abruptly, according to the atmosphere of the moment in Paris. The price was 19¾ and 20¾ within a few hours, but it failed to hold the rise, and the market relapsed into heaviness. Rio Tintos also came on offer as the French exchange gave way. Mild activity in the Rhodesian list brought in no public support. The principal feature of the week in the mining markets was furnished by Burma Corporations, which went up with a run on buying said to emanate from the East. The reorganisation proposals, somewhat complex as they are, have doubtless something to do with the strength shown by the price of the shares. Baldwins and Lake Views followed, to a small extent, the rise in Burmas. The various tin share markets are devoid of interest, nor is there anything doing in Mexican mines. A rally in Broken Hills was succeeded by quiet reaction. In the West African market, Tin Areas slumped on the apprehension of what the report may disclose. Russo-Asiatics have fallen back, and Indians are hardly mentioned.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

5-15 Year Treasury Bonds, repayable at par on May 1, 1935, bearing interest at a minimum rate of £5 per cent. per annum, payable half-yearly on May 1st and November 1st. Price of issue fixed by H.M. Treasury at £100 per cent., payable on application. These are still on offer. For full particulars see *Economist* of May 1, 1920, pages 899 and 915.

London Housing Bonds.—Registered bonds for £5 each or multiples thereof are obtainable for terms of 5, 10, or 15 years, at applicant's choice. Six per cent. interest and full repayment when due are guaranteed by the London County Council on the security of London's rates. Interest payable each September 30th and March 31st. The money will be applied solely for the purpose of housing schemes approved by the Government, and in particular to finance the housing schemes of the Metropolitan Borough Councils. We referred to these bonds in a leader in the *Economist* on June 12th, page 1282.

Phœnix Oil and Transport.—Capital £2,050,000, divided into 2,000,000 shares of £1 each and 1,000,000 shares of 1s each. In any distribution of profits the £1 shares are entitled to 75 per cent. and the 1s shares to 25 per cent. The present is an issue of 550,000 £1 shares at par. The company has been formed to acquire the assets of or controlling interests in several oil producing and refining companies in Roumania. Before the war the oil output of Roumania reached 1,800,000 tons per annum, but in 1916 the borings were damaged or destroyed to prevent them falling into enemy hands. As a result of reconstruction since 1916 the present output is at the rate of 900,000 tons per annum. The area of the leases and oil lands held by the companies to be acquired is about 10,500 acres, of which 1,174 acres lie within proved oil-fields. An independent report estimates profits from the refinery at £183,000 per annum, and recommends the addition of a plant for manufacture of paraffin wax and lubricating oils, which would cost £225,000, and bring in a net profit of £462,000 per annum. The profit from the oil-field is estimated at £127,000.

The purchase price is £489,108, of which £473,906 is to be in fully-paid £1 shares, and £15,202 in cash. The various companies have lodged claims with the British Government for losses and damage in 1911 to the extent of £618,200. Very little information is given as to the financial history of the companies, nor as to output, actual or prospective. The world's demand for oil is certainly likely to go on increasing, but the risks attaching to a venture of this kind should deter the average investor.

Hawthorns and Co., Limited. — Authorised capital £250,000, divided into 250,000 £1 shares, of which 110,000 have been issued. The remaining 140,000 are now offered for subscription at par. There are no preference issues and no debentures. The company was formed in 1896 to take over the business of shipbuilding, engineering, &c., previously carried on by Hawthorns and Co. Since 1917 the company's works have been enlarged and re-equipped, £120,000 having been the net cost of re-organisation. The balance-sheet shows a bank overdraft of £112,831, and it is stated that "the only charge on the company's assets is a bond over the property as security of the fluctuating bank overdraft, which, in turn, is fully covered by work in progress and trade accounts due to the company." Three years' profits only are shown, and a 20 per cent. dividend was paid in respect of last year. A moderate industrial risk, a favourable point being the statement that sufficient steel supplies are assured.

ACTIVE SECURITIES.

The following tables show the movements of the week in the more active securities of the various markets:—

P. N. Caridia, Esq., London Manager of the "Bank of Athens" and Director of "Cox and Co. (France), Limited."

GENERAL MANAGER: JOHN C. ELIASCO, Esq.

Extract from the report of the Board of Directors of the Bank of Athens to the General Meeting of the Shareholders, held on April 11-24th, 1920.

GENTLEMEN,—We have called you to this General Meeting of Shareholders, according to the provisions of the Articles of Assotion, in order to submit for your approval the accounts for the year 1919.

Your Bank wisely made preparations to take a useful part in the general resumption of business after the war, and, in consequence of its activities, we are able to lay before you satisfactory results.

These results appear in the balance-sheet under review, showing net profits of 13,388,510 drachmas, about double last year's figure, whilst the percentage of general expenses is somewhat reduced in spite of the considerable increase in expenses chiefly due to the consistently high cost of living and the continual enhancement in the prices of all commodities.

We have deemed it necessary to set apart out of these profits a sum of 7,308,050 drachmas to write down the accounts which, as we pointed out to you last year, we have been obliged to keep open under the headings "Loans on Sundry Guarantees" and "Loans on Securities."

As a consequence of this writing down, which has since been completed by sundry surpluses, we are at last in a position to inform you that no trace whatever now remains of your Bank's heavy past, and that your assets stand entirely clear to-day.

The remaining six millions which are available enable us to propose the distribution, over and above the first dividend of five per cent. (5%) due to the capital shares, of a supplementary dividend of 3 drachmas to be paid, to these shares, as well as to the "actions de jouissance."

Owing to unforeseen delays in the printing of the new shares, it has not yet been possible to effect the exchange of shares decided at your last Meeting. To overcome this difficulty, the aforesaid dividend will be paid on the equivalent basis of 7 drachmas per each existing share.

The new and important progress of your Bank is manifest in the increased totals of the balance-sheet, reaching 486,359,963 drachmas, which exceeds last year's figures by 116,207,306 drachmas.

The "immediately available assets" stand at 215,350,000 drachmas, as against 154,131,000 drachmas in 1918, representing 49½ per cent. of the total of the creditor accounts. Considering that this percentage was only 10½ per cent. and 11½ per cent. in the most favourable balance-sheets hitherto issued, those of 1910 and 1911, the present position of the Bank clearly stands out in all its strength and stability as the fruit due to the efforts of the change of Management.

BALANCE to 31st DECEMBER, 1919.

COMPANY MEETINGS, &c.

STRAITS SETTLEMENTS (BERTAM) RUBBER COMPANY, LIMITED.

INCREASED PROFITS—INCREASE OF CAPITAL SANCTIONED.

The ordinary general meeting of the Straits Settlements (Bertam) Rubber Company, Limited, was held, on the 3rd instant, at River Plate House, Finsbury circus, London, Sir West Ridgeway (chairman of the company) presiding.

The secretary (Mr H. Read Smith, F.C.I.S.) having read the notice convening the meeting and the report of the auditors,

The Chairman said: I think I may congratulate the shareholders on the marked improvement in the result of our operations for the year as compared with that for the previous year. Shortly, the result is that the profit has gone up from about £35,000 to over £99,000, and this eminently satisfactory result is due to the larger crop, a higher average sale price, and reduced costs.

The crop, you will see, is now substantially beyond the 1,500,000 lbs, but in comparing this figure with that for the previous year it must be borne in mind that during the greater part of the earlier period the crop was being restricted, owing to the shortage of transport facilities for bringing the rubber from the East to the consuming centres; while, during the year under review, we have returned to something like normal conditions with no artificial restrictions. That is, the estate has been producing its best output consistent with the proper treatment of the trees.

Sale prices were not high, but they have been at a level which we cannot describe as unsatisfactory. The report sets out the various prices for the different deliveries, and you will see that the average price realised for the whole crop was just over 2s 1¼d per lb. The third reason for the increased profit is the lower cost of production. This is now down to practically 8¼d per lb f.o.b., and well under 10¾d per lb for the average all-in price.

The main point is the f.o.b. cost, as the average all-in naturally fluctuates to some extent according to the proportion of the crop brought to London, which has to bear freight, dock dues, and insurance charges, in addition to the proportion of sale and establishment charges which accrue in respect of all the crop.

This point of cost of production is without question the most important and favourable feature of the results for the year, and enables us to look with a certain amount of equanimity, although certainly without any satisfaction, at the lower average price at present ruling for rubber.

COST OF PRODUCTION.

I think I should add that there is a tendency for cost of production to rise, owing to the increased cost of native labour and the general higher prices for commodities which rule in the East in common with the rest of the world. Rubber, so far as I am aware, is the only commodity which is an exception. I do not propose to prophesy as to whether the exceptional position of the rubber market in this regard is to continue, but I will only say that a number of people who should be competent to form a reliable opinion hold the view that this is a condition of affairs that cannot continue indefinitely, and that within a comparatively short period we shall see rubber at a higher price.

The point I wish to make, however, is that we are quite satisfied that our estate is exceptionally well situated for the production of rubber at a low cost, for various reasons, among which I would mention excellent health conditions and favourable transport facilities, and consequently any continued period of low prices would not affect our earning power to anything like the same extent as it would with an estate with a higher cost of production.

CULTIVATED AREA.

The area of our estate under cultivation is approximately 6,964 acres, of which 579 acres are coconuts. We have decided to cut out gradually the coconut trees and replant the land with rubber as opportunity occurs.

No extension of the area under rubber has been made during the year, and our present policy is to complete the planting of 1,500 acres on the Extended Company's property before considering further extensions on our own land. I would draw your attention to the fact that we still have some 3,500 acres of unplanted land. It is freehold, and in view of the rise in land values in the East it is a substantial asset in addition to our rubber plantations. Possibly we may decide to dispose of a part of this area to another subsidiary company at a later date. About 300 acres were added to the mature area during the year, and further trees will arrive at the tapping stage during the present year.

CONDITION OF THE PLANTATIONS.

With regard to the condition of the plantations all reports which we have are of the most favourable nature. The planted area is clean throughout, the trees have a vigorous growth and a marked feature is the practically complete absence of any serious disease or pests among the trees. This is the general purport of the reports from the manager and visiting agent, and I am able to confirm it by my own observation on my recent visit to the property.

We have continued our conservative system of tapping, and practically the only criticism which we have had in this respect is that the tapping might be rather heavier. The Rubber Growers' Association has recently recommended its members to consider seriously the general adoption of alternate day tapping. It is having our serious attention, and we have brought this recommendation to the notice of our manager.

ESTIMATE FOR CURRENT YEAR.

Our estimate of production for this present year shows a moderate increase to 1,600,000 lbs, which crop is expected to be produced at about 8½d per lb f.o.b., and we have entered into contracts for the delivery of 20 tons monthly at a price which assures us of a profit of about 1s 2d per lb on that quantity. Our policy in regard to forward contracts is to take advantage of such opportunities as may occur to sell a moderate proportion forward, leaving the balance for disposal at current prices ruling at the time the rubber is received here from the East. By far the greater part of our crop is disposed of in London, which we are still of opinion is the best market for the disposal of large quantities. The question of labour is one that has required serious consideration throughout the past year. The main difficulty arises from the shortage and high cost of rice. Our own labour force is practically the same as it was at the beginning of the year, but, naturally, with the larger number of trees coming into tapping, we should like to see it increased.

CAPITAL EXPENDITURE.

We now come to the question of capital expenditure. As you will see from the report, we spent about £9,300 during the year on capital account, the greater part of which was for upkeep of the immature area, which you will see was about 1,850 acres at the beginning of the year, reduced to about 1,550 acres at the end of the year, owing to the transfer of 300 acres to tapping. This immature area will continue to require expenditure for the next few years, and, in addition to that, new buildings and machinery will require to be installed, such work having been deferred owing to the impossibility of obtaining materials during the war. We are also negotiating for the purchase of a number of comparatively small blocks of land owned by native proprietors, which are within the general borders of our estate, and which it is in every way desirable should be in our hands, as some of these are cultivated in rubber. If we succeed in acquiring the whole it would involve a price of some £6,000. The position is that the excess profits duty tax takes a very large toll of our profits, and we feel that it would be more advantageous to the shareholders that the money required for capital expenditure should be provided direct from capital moneys, rather than from allocations from profits.

INCREASE OF CAPITAL.

We have, therefore, decided to submit a proposal to you for the increase of our authorised capital by £100,000, and to issue £50,000 of this amount to the shareholders. This, as you will see, involves an increase of our issued capital by 25 per cent., and it will permit of our offering to the shareholders one new share in respect of every four shares at present held. We propose to issue these new shares at par. The market price at present is 8s 9d, so that the new issue is tantamount to a substantial bonus to the shareholders. The provision of this additional capital will, of course, mean that the available profits will in future be divided over £250,000 of capital, instead of £200,000. We think, however, it will be found that the obviating of the necessity of allocations for capital expenditure from profits and the advantage in respect of allowances for new capital in the assessment for excess profits duty will more than counterbalance the amount necessary for dividend on the new shares. In other words, we fully expect that this additional issue will not diminish nor affect the dividend-earning power of the company.

THE ACCOUNTS.

With regard to the accounts, the only other item upon which I need comment is the liquid assets at date of the accounts. These, including rubber in transit, amounted to approximately £90,000, which I feel sure you will consider a most satisfactory position.

I now come to the question of profits. As you will see, the sum of approximately £1,150 was brought forward from last year, which, added to the amount of profit for the year, and repayment of excess profits duty in respect of the year 1918-19, gives a total of approximately £112,000 available. Of this sum we have already paid to the shareholders an interim dividend of 10 per cent., absorbing £20,000, and we have transferred to reserve account, in

respect of capital expenditure provided out of revenue, the sum of £8,000. These, deducted from the £112,000 available, leave a balance in round figures of £84,000.

We now propose to distribute £40,000 of this sum by way of a final dividend at the rate of 20 per cent., which, with the interim dividend already paid, makes 30 per cent. for the year. The balance of about £44,000 is subject to excess profits duty and corporation profits tax, which together may amount to about £30,000 or £35,000. The remaining balance will be carried forward to next account.

Mr A. Patrick Hadow seconded the resolution, which, in the absence of questions, was put to the meeting and carried unanimously.

At an extraordinary general meeting resolutions providing for a change in the name of the company to "Bertam Consolidated Rubber Company, Limited," and an increase in the capital to £300,000 by the creation of 1,000,000 shares of 2s each, were carried.

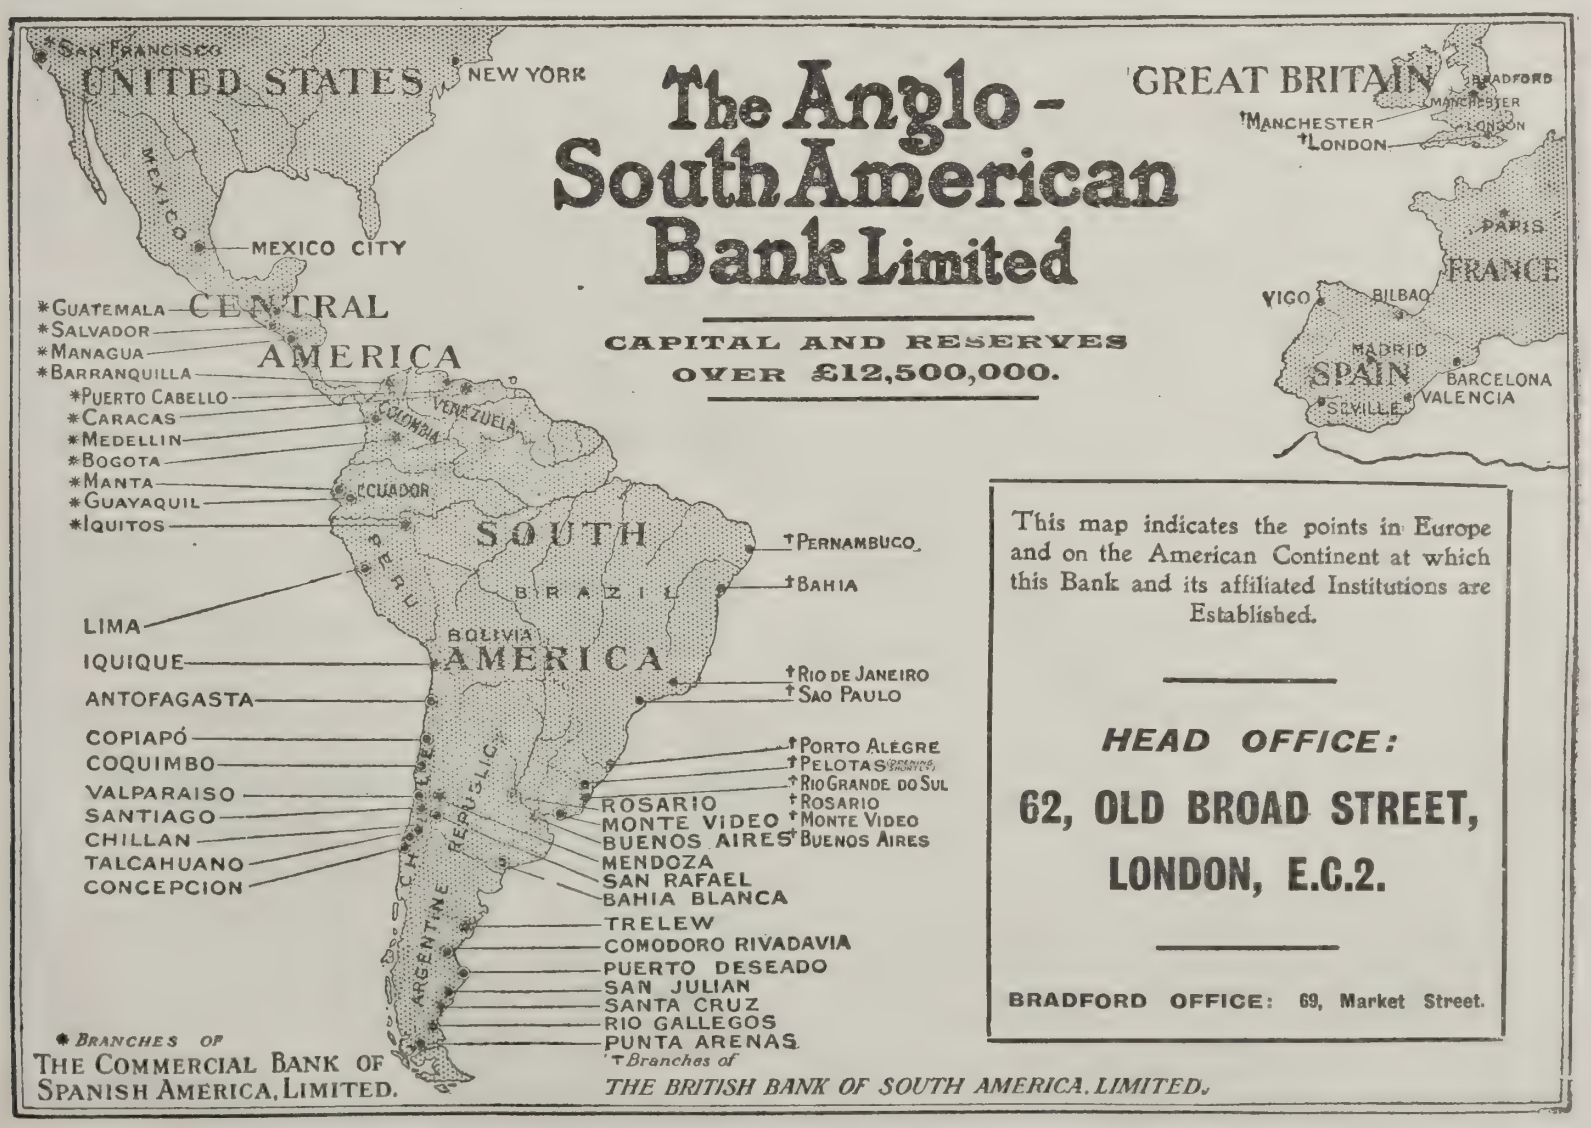
EMPIRE OF INDIA AND CEYLON TEA COMPANY, LIMITED.

SALE DANGUA JHAR AND CEYLON ESTATES.

The twenty-fourth annual ordinary general meeting of shareholders was held, on the 4th instant, at the offices of the company, 2a, Eastcheap, London, Major A. Y. Thomson, the chairman, presiding.

The Chairman, in moving the adoption of the report and accounts, said: A satisfactory price had been obtained for the whole crop, our receipts being enormously in excess of any previous year, but this was to a great extent counterbalanced by the unavoidably heavy expenditure. The sale of our Dangua Jhar Estate and our estates in Ceylon calls for some explanation. On the whole, the results from this garden have been disappointing. When matters are finally completed we shall have in exchange for Dangua Jhar, Lebanon and Knuckles, a sum that, invested at the present bank rate, will give us annually a considerably larger income than the average profits obtained from them since the formation of the company, and ten times the income we have obtained from them during the last two years. Our intention is to write off from the estates account the net sums received and utilise the money for extension in the future, gradually replacing the amount so written off as the money is reinvested in these extensions, meanwhile it will be earning a good rate of interest.

The balance-sheet shows an increase in the issued share capital of 94,000 ordinary shares of £1 each fully paid, being the amount of reserve capitalised. On the other side the estate account is increased by £323 5s 11d, purchase of land adjoining Dangua Jhar. Advances at garden show a decrease of £11,023 11s 8d, and expenditure in advance a decrease of £5,995 19s 4d as compared with the 1918 figures, which means £17,019 11s less to be charged against 1920 working. Investments remain unchanged at £49,226 11s 5d, and represent 97,500 £1 fully paid shares—the British-Malay Rubber Company, Limited, £14,250, the cost of £15,000 of 5 per cent. War Loan, and shares in the Tezpur Balipara Tramway Company, which cost £4,575, now written down to £2,476. On the one side we have stock of tea sold and partly realised £281,175, and on the other liabilities £168,042, both of which items are so heavy owing to the delay in the delivery of our teas, and consequently in realising our proceeds. Our total reserves show a reduction from £88,543 to £32,678, owing, of course, to the capitalisation of reserves already referred to. At the present moment the immediate outlook for the tea-producing industry is not bright, but this company has never been in a better position to weather bad times.



The report and accounts were agreed to and dividends confirmed.

BURMA CORPORATION, LIMITED.

An extraordinary general meeting of Burma Corporation, Limited, was held, on the 6th instant, at River Plate House, London, Sir Trevredyn R. Wynne, K.C.S.I., K.C.I.E. (the chairman of the company), presiding.

The secretary (Mr D. Anderson) read the notice convening the meeting.

The Chairman said: Ladies and gentlemen,—The resolutions which I shall have later on to submit for your consideration mark a very important stage in the life of this great company. For reasons which were so ably put before you by Mr Guedalla at the general meeting held last October, a new company was duly registered in India to take over the mines and smelting works of the Burma Mines, Limited, of which latter company this corporation practically holds all the capital. As explained in the circular of July 29th, the corporation, having an issued capital of 964,499 shares and a holding of exactly the same number of shares in Burma Mines, Limited, each share in this corporation entitles the holder to one share of Burma Mines, Limited, and, as the holder of the latter share, to 14 shares in the Indian company. To enable this exchange to proceed, it therefore becomes necessary for this corporation to go into liquidation in order to distribute its shares in Burma Mines, Limited, to the shareholders in this corporation, and for Burma Mines, Limited, to be put into liquidation, arrangements for which are being made, in order to distribute the shares in the Indian company to the shareholders. As soon as the resolutions for liquidation have been confirmed, which will be by the end of the month, the liquidator will arrange for the exchange of

shares as rapidly as possible. The shares of the Indian company will, in the first instance, be allotted on the London register; but shareholders will be able to transfer immediately to the Indian register should they so desire. It has probably occurred to you—indeed, several shareholders have inquired—why it has required such a long time to effect the exchange of shares; but shareholders will readily understand that, this being a non-ferrous metals company, many legal formalities had to be complied with before the transfer to India could be made. For example, the consent of the Board of Trade had to be obtained and the approval of the India Office and of the Indian Government secured. In addition, it was thought advisable before completing the transfer to deal with the question of finance and to arrange for the provision of working capital with a view to freeing future profits for dividends. All these matters take considerable time. On the latter point—finance—I am now able to inform you that arrangements have been completed for the issue by the Indian company of £1,000,000 8 per cent. convertible debenture stock. As you are aware, up to the present time the whole of the net income from the property has been applied to the development of the mines and the enlargement of its smelting, milling and power plant. The time has, however, come when profits should be applied to the payment of dividends, and this will be made possible by the provision of fresh working capital to carry out the policy of expansion. The debenture stock will be issued in rupees at the fixed rate in London of 2s per rupee; it will be repayable after December 31, 1925, and on or before December 31, 1930, at 110, and a substantial redemption fund will be established at the end of 1925. Each stockholder will have the right up to December 31, 1923, to exchange his stock at par into fully paid shares at the rate of Rs. 11 stock for one share or up to December 31, 1925, at the rate of Rs. 14 stock for one share. The issue has been purchased by the National Mining Corporation, Limited, who will shortly offer it for sale at par, and they will give preferential consideration to applications received from shareholders of the corporation. I do not think, gentlemen, I would be justified in wasting your time by a long speech on the affairs and operations of the corporation, because by great good chance we have, during the last few days, been able to place before you a copy of a report by Mr John A. Agnew, whose name you well know, which gives a full description of the mine, its operations, and its probable future. This report was made in April, 1920. To my mind, from the shareholders' point of view, this report is a most valuable one. Firstly, because it is made by a gentleman of the highest reputation in the mining world; secondly, because it is a report which deals with every point of interest to shareholders; and, thirdly, because it is a report made primarily not for public use, but for the National Mining Corporation, Limited. I trust, gentlemen, you have found time to read this report, and I hope that it has given you all the information you require. I now beg to propose the first resolution, viz., "That Burma Corporation, Limited, be wound up voluntarily, and that David Anderson, of 1 London Wall buildings, London, E.C. 2, chartered secretary, be and he is hereby appointed liquidator for the purpose of such winding-up." I will ask Mr Guedalla to second this resolution, but, before putting same to the meeting, will be pleased to answer any questions which shareholders may wish to ask.

Mr Herbert Guedalla seconded the resolution.

Mr H. M. Ridge said that the shareholders were very much indebted to the directors for the valuable report they had published, and more especially to Mr Agnew, who had given them such a complete and comprehensive review of the situation. At the same time, he wished to ask the directors whether they could give the shareholders any indication of the past profits made by the Burma Mines, who would be the directors of the new company in India, and what arrangements were being made for the supply of information to British shareholders, more especially with regard to development work, the results of production, the publication of mine plans, and similar data. He desired also to ask whether it was proposed to acquire any other properties, and, if so, whether there were any means by which the shareholders in this country could be consulted beforehand; further, on what basis the royalty payable to the Indian Government, mentioned in Mr Agnew's report, was calculated. The Chairman might also state what progress had been made with the new mill.

The Chairman, in reply, said that the results of the working of the Burma Mines had been published in the annual reports issued by the board in previous years. The gross receipts, the cost of operations, and the profits made each year had been given in those reports, together with the amounts of depreciation written off. The present directors of the new company in Burma were himself, Mr John Hogg, a well-known merchant in Rangoon; Mr C. F. Clifton, another well-known resident in Rangoon; Mr Gerard Lovell, a mining engineer of very considerable reputation, and Mr A. T. W. Paine, who represented in Bombay very large financial interests. With regard to giving information in future to shareholders in London, a committee of shareholders would be established here, who would be in close communication with the board in India, and that committee would receive reports on output, development, &c. Any shareholder who wished to ascertain anything about the working of the company in the future would only have to apply to the London committee to get all the information he required. As to the question about acquiring other properties, at the present moment he was not aware that the Corporation meditated acquiring any particular property. The royalty payable to the Indian Government was three-fourths of 1 per cent. of the metal value of the ore as mined. The figure, of course, varied according to the price of metals, but Mr Agnew, in his report, gave what the royalty worked out at per ton, namely, about 2s, or something like that. A cablegram was received two days ago stating that the new mill was now in operation. In addition, a cablegram had come to hand stating that the Mansam power scheme—that was the Mansam Falls which they had acquired in Burma, producing about 3,000 horse-power—had been completed. The Government inspector had been there to pass the electrical installation, and the works would come into operation at once. Ample power was provided for the new mill under this scheme.

Mr R. Tilden Smith (a director), speaking from the body of the hall, moved as an amendment that Sir William B. Peat should be appointed joint liquidator.

Mr Huxtable seconded the amendment.

Pressed as to his reason for making the amendment, Mr Tilden Smith said that Sir William Peat had had great experience in matters of taxation which would be useful in connection with the liquidation; but the Chairman, however, pointed out that Mr Anderson had been in constant touch with Sir William Peat, as the company's auditor on taxation questions, and therefore he did not see that that gentleman could give greater assistance in the liquidation than he now did as the company's adviser on this matter.

Several shareholders spoke in opposition to the amendment, and eventually it was lost on a show of hands.

Mr Tilden Smith then demanded a poll.

The original resolution was then put and carried by a large majority on a show of hands, and Mr Tilden Smith again demanded a poll.

The Chairman next moved:—"That the said liquidator be and he is hereby authorised to distribute in kind amongst the shareholders of this company, in accordance with their rights and interests therein, the 964,499 fully-paid shares in Burma Mines, Limited, held by this company."

Mr Guedalla seconded the resolution, which was also carried, and again a poll was demanded by Mr Tilden Smith.

Mr F. W. Baker proposed the following resolution:—"That this meeting approves of a capital payment by the Burma Corporation, Ltd. (India), to certain of the London directors and officials of the Burma Corporation, Ltd. (England), and the Burma Mines, Ltd., who are giving up their positions owing to the formation of the Indian company, such capital payment not to exceed the sum of £20,000."

Mr A. Stanley Elmore seconded the resolution.

Some discussion ensued, and ultimately the resolution was carried by 35 votes to 6.

Mr Tilden Smith demanded a poll, and the Chairman announced that the polls would remain open until the confirmatory meeting to be held on the 23rd inst.

A vote of thanks to the chairman and directors concluded the proceedings.

		British India	711,831
		Other countries	225
Total value of imports of gold	454,448	Total declared value of exports registered in the week	1,172,671

Messrs Samuel Montagu and Co. write on August 5th as follows :—Gold : The Bank of England gold reserve against its note issue is £121,529,460, an increase of £55,830 as compared with that of last week. The fair amount of gold that came into the market was taken for India and the United States of America. The great rise in the cost of the commodity owing to the pronounced weakness of the United States exchange has hindered Indian operators from showing equal activity to that of last week, and has caused some re-sales. The value of the new gold used in the arts and industries of the United States of America in 1917 was returned as $34,803,445. The amount of gold imported into Argentina up to May 24 last was $90,107,700 gold. The external value of a sovereign calculated in Treasury currency

Every Employer of Labour

is invited to send for particulars of a unique system of "Group Life" Insurance, providing substantial benefits for Employees and their dependants, and which should materially assist in the establishment of closer relationship between Capital and Labour.

Please ask for "Group Life" Insurance Prospectus.

EAGLE-STAR & BRITISH DOMINIONS INSURANCE COMPANY, Ltd.,

Head Office: British Dominions House, Royal Exchange Avenue, London, E.C.3.

ASSETS EXCEED £19,000,000.

notes is to-day 26s 11d. Silver: The movement of prices has been upward, but not appreciably approximating the parity with the United States until to-day. India has not been much in evidence as a buyer. There have been some purchases for China, where, despite the lack of export business, great speculative activity has obtained, based on a rising exchange. Possibly the demand for silver by India has brought this into existence, although, measured by pre-war standards, the Indian inquiry is by no means substantial. The strength of the market does not lie so much in the demand as in the fact that the United States is unable or unwilling to feed it. There has been some United States silver sold here, but only a slight quantity irrespective of the parity. The Continent has resumed selling, tempted, possibly, by the rise in price. Spot silver is more abundant now that the Indian demand has abated, and a premium of 1s 4d has been established to-day upon the quotation for forward delivery. It is officially reported that the quantity of new silver used for industrial purposes in the United States during 1917 was 15,998,807 fine ounces. Up to July 10th, 7,777,545 ounces were purchased under the Pittman Act. We understand that the prospects of the Indian monsoon are considered good. No fresh Indian currency return is yet to hand. The stock in Shanghai on the 31st ult. consisted of about 37,280,000 ounces in sycee, 20,000,000 dollars, and 1,190 bars of silver, as compared with about 36,730,000 ounces in sycee, 19,800,000 dollars, and 1,700 bars of silver on the 24th ult.

GOLD AND SILVER PRICES.

The price of gold and cash and forward prices of bar silver during this week and corresponding periods in previous years are as below:—

Reports and Notices.

Mr George M. Low, manager and actuary of the Scottish Equitable Life Assurance Society, has intimated to the directors his intention to retire at an early date. Mr Low has been connected with assurance business for well over half a century. He has twice been president of the Faculty of Actuaries, and for some years he acted as chairman of the Associated Scottish Life Offices.

BANKS.

BANK OF ATHENS.—The report for the year 1919 states that profits amounted to 13,388,510 drachmas, of which 80,459 drachmas was written for depreciation of furniture, and 7,308,051 in respect of bad and doubtful debts. The reserve fund was credited with 600,000 drachmas, 240,000 drachmas went to directors, 30,000 drachmas for subscriptions and donations, 30,000 drachmas to superannuation fund, 365,217 drachmas to income-tax, and 4,200,000 drachmas to an 8 per cent. dividend, leaving 534,783 drachmas to be carried forward. The balance-sheet shows deposits and other accounts at 433,013,970 drachmas.

GOVERNMENT STOCKS, &c.

GREEK DEBT.—The Council of Foreign Bondholders issues the following information, compiled from figures published by the International Financial Commission at Athens, with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to May 31, 1920 (new style January 14 to June 13, 1920) :—

		Monopolies, Tobacco, Stamps, Stamped Paper, Naxos Emery.	Piræus Customs.
		Drachmæ.	Drachmæ.
Gross receipts, May, 1920		5,146,104.44	4,619,240.65
Do do 1919		4,488,610.95	4,694,156.50
Estimated receipts for five months (Law of Control)		12,041,666.67	4,458,333.33
Actual receipts for 1920, five months		25,762,452.62	25,797,202.55
Actual receipts for 1919, five months		18,792,867.90	17,959,384.90
Difference between estimated and actual receipts for five months	1920	+ 13,720,785.95	+ 21,338,869.22
	1919	+ 6,751,201.23	+ 13,501,051.57

Note.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and naxos emery, 49⅕ per cent. is applied towards increasing the minimum rates of interest and sinking fund on the external gold loans of 1881 to 1893. The receipts in gold from both naxos emery and the Piræus Customs are converted into drachmæ at par when the average rate of exchange for the month is par or below par, but when the average rate for the month is above par the conversion is made at that average rate.

NICARAGUA STERLING LOAN OF 1909.—The Council of Foreign Bondholders have received telegraphic advices from the bankers in New York stating that they have remitted to London funds covering the payment of the arrears of sinking fund on the 1909 bonds, and of the whole of the funding certificates outstanding.

MISCELLANEOUS.

CONSETT IRON.—The report for the year ended June 30, 1920, states that the profit, after making a provision for excess profit duty and other taxation, depreciation, stocks, &c., is £599,144. The directors recommend extinguishing the special expenditure, £3,199, making a provision towards deferred repairs, £50,000, writing down investments £90,000, paying a dividend of 1s 8d per share on the ordinary shares in addition to the interim dividend of 10d per share, leaving to carry forward £40,945.

W. AND H. M. GOULDING.—The report for the year ended June 30, 1920, states that the net profits, after providing for excess profits duty and including dividends from subsidiary companies, amount to £84,070, out of which it is proposed to set aside £7,000 to cover estimated discounts on realisation of outstanding debts. This, with £4,517 from last account, leaves £81,587 available for distribution. The directors recommend a dividend of 8 per cent., together with a bonus of 3s per share on the ordinary shares for the year, of which 4s per share, with the bonus of 3s, is now payable, and the second 4s per share at December 31st next, less tax. They further recommend that a special bonus of £700 be paid to the directors, and that £5,000 be carried to depreciation account and £25,000 to reserve, bringing that account up to £100,000, carrying to next account £4,862. During the year an additional 18,000 ordinary shares were issued at a premium of £45,000, which amount it is proposed to add to reserve account.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Weather conditions have continued dull and unsettled, further rains and a low temperature for this period of the year still prevailing, and although farmers were able to make some progress with the remaining part of the hay crop during finer intervals, a large quantity has still to be cut and carried. Warmth and sunshine is now urgently needed in order to arrest deterioration and bring cereal crops to maturity. The present outlook is far from

PARTNERSHIPS.

What provision does your Partnership Deed contain as to payment out of capital to a retiring Partner? It would pay you to send a card for particulars of the special life schemes to meet such cases as drawn up by the Western Australian Insurance Co., Ltd. General Manager, G. M. Wyatt, 45-47, Cornhill, London, E.C.3.

Assets exceeding **£750,000.**

favourable, many fields having been laid by heavy rains, and in some parts the growth of barley and oats is stunted and unlikely to ripen properly. The international position shows little variation, crop prospects in the great exporting countries being favourable as a rule, with indications that the bulk of importers' requirements will be met during the new cereal year. The United States winter wheat crop gives every satisfaction, both as regards quality and yield, while spring sowings are making normal progress, though latest forecasts are not so high as those previously given. Official reports from Canada advise favourable crop conditions, especially in the western belt. Beneficial rains in Argentina have greatly improved agricultural prospects, and an average acreage is expected under wheat and oats. The better prospects in Australia are reflected by the large forecast of New South Wales, which State was especially effected by drought, and provided crops in other parts of the Commonwealth are equally good, a fair surplus should be available for export. In India further rains have fallen, with beneficial effect, the condition of native grain crops being satisfactory. Prospects in Western Europe are generally maintained. Native wheat nominal in the absence of offerings, but liberal allocations of imported were made to millers at regulation prices. The flour trade disclosed a moderate demand for G.R. grade at 63s 6d per sack ex mill, but the better qualities of imported are readily absorbed at 65s 9d per sack of 280 lbs ex store. Shipments from North America were on a lighter scale, and stocks here are decreasing. Barley quiet, but steady on the spot, supplies being in manageable compass. Californian, ex ship, quoted 105s per 448 lbs; American malting, 82s; Canada Western No. 4, 81s 6d; ditto feed, 75s; American feed, 73s; Morocco, 78s; all landed per 400 lbs. On c.i.f. terms a feature was the sale of a cargo of Danubian-Bessarabian August-September clearance at 70s per 400 lbs. Maize quiet, but fairly steady on the spot, Plate, ex ship, quoted at 64s, and ditto landed terms at 66s per 480 lbs. African maize meal £18 per ton landed. In the forward section a weaker tone prevailed, owing to the intention of the Government to put their holdings on the market at current rates. Later, however, the tone improved, though prices were subject to some irregularity. A cargo of Dan.-Gal.-Foxanian, August-September, was sold at 65s, which is about on a par with Plate cargoes in a similar position. Parcels of Plate (old crop), July-August, were sold at 61s; August-September, 60s 6d, 61s, 59s 6d, and 61s; September-October, 60s, 60s 6d, 59s, and 60s 6d. Oats occasionally rather dearer on scarcity, but trade without appreciable improvement. English white 75s to 80s, grey winter new crop 65s per 336 lbs. Plate 62s 6d to 63s, American white clipped 62s 6d to 63s 6d per 320 lbs landed. On c.i.f. terms prices were irregular, but firmer, and a fair business transpired in Plate parcels f.a.q. afloat at 49s 6d to 53s as to position, June-July 51s, July-August 47s 6d up to 49s, August-September 46s 6d to 47s 9d, ditto 42 lbs July-August 52s, August-September, 51s, per 320 lbs. Beans slow. English spring 100s to 105s, new winter 92s 6d-95s per 532 lbs. Chinese horse beans £17 per ton, ex store. Pease rather firmer. English marrowfats 125s-135s, small blues 105s-125s, maples 130s to 140s per 540 lbs. Rye, English new crop, on rail, 86s per 504 lbs. Oatmeal, Scottish, £40 to £44; American £34 to £36; rolled oats, £33 per ton. Homeward freight markets have been quiet while under holiday influences, with only a limited demand for grain tonnage from the Argentine, and charters concluded were steamers to load maize from Rosano to U.K. September at 87s 6d to 85s, August 80s, September to U.K. 85s, Continent, and 90s West Italy. North America quietly steady, and heavy grain from Montreal, September, done at 115 6d, Northern Range to U.K. September 115 6d to 115, October-November 125 6d U.K.-Antwerp-Rotterdam, and 135 6d Hamburg, while Gulf to U.K., September, was placed at 125 6d per qr. India dull and weak, with Bombay-Karachi nominally 60s on dead weight home Australia nominal for grain. Further tonnage has been taken to load maize from the Danube to West Italy at 45s to 47s 6d, and a steamer from Beira to U.K. also maize at 95s per ton.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1919-20, contrasted with 1918-19, 1917-18, and 1916-17.—(Particulars of imports of wheat and flour temporarily discontinued):—

	1919-1920.	1918-1919.	1917-1918.	1916-1917.

THE IRON AND COAL TRADES.

Our Middlesbro' correspondent's report, dated August 5th, is as follows:—Pig-iron: The usual weekly market was not held on Tuesday owing to the local holidays. Business is very quiet, and prices have not been altered. Foundry quality of Cleveland pig-iron is still very scarce, but forge quality is fairly plentiful. Producers of East Coast hematite pig-iron are fully sold up to the end of this year, and are not prepared to commit themselves for any further ahead. Prices remain unchanged at 217s 6d per ton for Cleveland No. 3 and No. 4 foundry G.M.B., and 260s per ton for mixed numbers East Coast hematite. Manufactured iron and steel: The works are keeping up good supplies, which are readily taken up by shipbuilders and constructional works. Prices remain firm without alteration. Steel ship plates, home, £23 10s; steel ship angles, £23; iron ship angles, £30 15s; iron bars, £30; steel rails, £25 net. Iron ore: Deliveries have been fairly good since the drop in freights, and consumers have accumulated fair stocks. New business is scarce. Best Rubio is quoted 49s per ton, c.i.f. Tees, on 17s freight basis.

Our Sheffield correspondent writes:—Industrial Sheffield has been almost idle this week, except for repairs and overhauling of plant, but the rolling mills have plenty of work to start with. The paucity of new business continues, and an increasing number of firms are getting through their contracts, and will soon be wanting more. A good deal of slackness in the engineering trades is due to inability to obtain the necessary castings, caused by the inadequate output of pig-iron. The exhibition with regard to the latter does not improve, and is a sinister feature of trade, pig-iron being the basis of both iron and steel manufacture. The scarcity applies to every description of pig except forge. The crucible steel department is actually suffering from depression, as the working of furnaces in the city does not average three days per week. The weakness is chiefly in the sale of high-speed steel, but there is also comparatively little demand for electric steel. A few good orders from the United States are being booked. France is offering this material at lower rates than those charged in Sheffield. The demand for all kinds of alloys of steel is quite stagnant. Ferro-silicon is now in ample supply, and the position of ferro-manganese is slightly easier. The coal market is suffering from the holidays, as the great industrial users have closed for a longer period than usual. The position enables reserve stocks to be increased, but the large capital outlay involved by this operation is a deterrent. The supply of slacks has been short again. The market for house coals is easier. Merchants anticipate a revival of buying in this department after the holidays. Prices current per ton at pits are:—Best South Yorkshire hards, 33s 2d to 33s 8d; ditto Derbyshire, 32s 8d to 33s 2d; Tyne steams (export), 155s; steam cobbles and nuts, 31s 8d to 32s 2d; best hard slacks, 28s 5d to 28s 11d; small slacks, 23s 2d to 24s 2d; branch, 37s 2d to 37s 8d; Silkstone, 33s 8d to 34s 8d.

Our Glasgow correspondent (writing on Thursday) says:—Business in iron and steel connections is now pretty well back again to its normal state, the producing and consuming works having got into full running conditions on Monday last. Scotch pig-iron makers report the existence of a strong demand for all qualities, and that from both home and export markets. Though there is no fixed agreement in force, makers are aiming at allotting 10 per cent. of their outputs to shipment requirements, for which they are getting £16 10s to £16 12s 6d per ton for No. 1 at the works, and £16 for No. 3. For the home market No. 3 is called £13 10s, and No. 1 £13 15s (occasionally £14) a ton. Scotch hematite is quoted as high as £14 0s 5d a ton at steel works; but consumers are looking for easier prices, in sympathy with the drop in freights from Bilbao to the Clyde, and which means much to consumers. Only recently ore carriers were commanding 32s

Branches: Amoy, Batavia, Bangkok, Bombay, Canton, Foochow, Hankow, Hongkong, Kiukiang, Keelung, Kobe, Moji, New York, Osaka, Semarang, Shanghai, Singapore, Soerabaya, Swatow, Tainan, Tokyo, Yokohama, &c., &c., and Correspondents in every principal town in the World.

The Bank is incorporated by Special Charter of the Imperial Japanese Government, and is authorised to issue its own notes in Formosa, conducts general Banking Exchange Business, undertakes Trust Business, and acts as Business Agents for other Banks. Special facilities are available for Exchange Business on Japan, China, India, Straits Settlements, Dutch East Indies and France, where the Bank has special working arrangements with Cox & Co. (France) Ltd. Deposits are received for fixed periods on terms which may be ascertained on application.

a ton from Bilbao; to-day business has been done at 20s a ton, and even 17s a ton has been named. In the circumstances forward business, that is beyond October delivery, has been practically suspended, and results will be awaited with interest. At all steel works great activity prevails in the rolling of plates and angles, and though good deliveries are being given, shipbuilders and boilermakers especially complain that supplies do not cover needs. Structural engineers are as busy as they can be on renovations at producing works, and on the construction of bridges. Machinery builders are fully employed on turning out plant for export to India, Japan, and the Australian colonies. There is also a very heavy export tonnage on hand in tubes, and in iron and steel bars. Sheets are in request for next spring delivery, with a tendency on the part of manufacturers to book at current prices without liability on the part of buyers for possible changes. On the contrary, sales have been made (to a light extent) with the condition that the purchasers benefit from any downward move that may take effect in the interval—that is, before delivery. Coal trade quiet. No export deals are going through, and where possible surpluses are being stacked.

THE COTTON TRADE.

MANCHESTER, August 5.

The conditions in the market during the week have been too unsettled for an active trade to be done, and although a considerable inquiry has been dealt with the turnover has not been at all important. Enterprise and initiative in trading circles is being kept back by the uncertain political situation, and most firms are inclined to restrict their commitments. A large inquiry has again been dealt with in piece goods for India, but actual business has been very irregular. Fair lines have been booked in miscellaneous fabrics, but only occasional sales have been reported in standard makes, and in most goods Manchester prices seem to be out of the reach of dealers abroad. Operations for China have been practically at a standstill, and no support has been given by the Near-Eastern outlets. Some moderate lots have been sold for South America, chiefly in printed and dyed sorts. Limited buying has occurred in home trade cloths. There continues great irregularity in the quotations of manufacturers. In American and Egyptian yarns for home use buyers have purchased from hand to mouth, and there has been no disposition to anticipate future requirements. Only occasional contracts have been reported in shipping yarns, most of the demand being for India.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—There is a more cheerful feeling in trade circles, and although business is still being conducted on very restricted lines there is rather more confidence, and a growing impression that prices have touched the lowest point. Some fair weights of tops have been sold recently at current prices, and topmakers are looking for a revival in the course of a few weeks. It is thought that many spinners will soon be compelled to come into the market for tops, and quotations to-day are firmer than they have been for some weeks past. Spinners report more inquiry, and while some say that they do not get past this stage, others assert that they have booked some excellent orders in singles and twofolds during the past week. Quotations are very irregular, however, and everything depends on the position of the seller. The piece trade is slow, and new orders are few and far between. Wholesale fabric buyers are sounding the market, however, and there may be a revival at any time. Apparently everybody is waiting for the lowest point to be reached. Judging from the recent inquiries, there will again be a run on Botany fabrics, though prices, of course, will be on a much lower level than that ruling three months ago. Apart from Downs and good halfbreds, English wools are almost entirely neglected.

COLONIAL WOOLS.

(FROM A CORRESPONDENT.)

There still continues to be a fair amount of rain over large areas in Australia, and what has fallen is bound to have benefited pastoral properties very greatly. I understand that the winter rains have enabled agriculturists to sow a big weight of seed, all of which is promising, and as shearing will now become general throughout the Commonwealth, the recent heavy rains cannot but have washed a good deal of surplus dust out of the fleeces, and so paved the way for good conditioned wool being shorn. Of course, this means a fairly light clip, and less bales on many stations, but if the wool yields 2 or 3 per cent. more on account of the fleeces being rid of surplus extraneous matter, it will mean no less clean wool in the aggregate for manufacturing

purposes. All accounts speak of a sensibly worse clip owing to deficiency in length and soundness, two very important characteristics which contribute largely to the market price of colonial wools.

During recent weeks I have emphasised the big weight of colonial wool at present available which is tender, and I am afraid that selling brokers will have considerable difficulty in getting rid of this. Everybody knows that a weak stapled wool means increased loss in combing, the larger production of noils increasing the cost of the combed top. All topmakers state that the manipulation of wool into tops is costing to-day from 6d to 9d per lb. more in merinos compared with April, owing to the great fall which has taken place in the price of merino noils, while the cost of even crossbred tops has increased 3d to 4d, according to quality. This is a feature of the wool trade which buyers have to reckon with, and which will have to be got back presumably in a lower price being offered for wool at auctions. Big stocks of noils exist in Bradford, so much so that some combers are stipulating for the removal of the noils when combed. Merino noils are selling at from 21d to 25d, according to the amount of vegetable matter there is in the noil, and the fall is indeed serious when good noils were selling at 58d last March.

The written reply by the Parliamentary Secretary to the Ministry of Munitions, to questions addressed by the Labour Member for Spen Valley, is rather significant, particularly in view of the fact that the quantity of Government wool allocated between December 1st and June 30th last was no less than 77,786 bales. Where has it gone? I am glad to see that the actual wool issued or sold amounts to 1,511,234 bales, but it is the allocation wools which surprise everyone. Everybody assumed that the wools allocated to spinners and manufacturers ceased long before last December, and surely no wools were allocated to users on the same basis of values as ruled during the middle of 1919. That practice has been a very sore spot in the minds of colonial growers, simply contributing large profits to users when everyone could well afford to pay open market prices. I shall be greatly surprised if the Director of Raw Materials is not called upon to say where these 77,786 bales have been allocated, and the entire industry, including growers, has a right to know this. The day has gone by for the allocation of wools, unless it be to Continental countries in crossbreds at Government limits, and the sooner Central European buyers can be induced to come to London and bid publicity, the better it will be for the entire wool textile industry.

OILSEEDS AND VEGETABLE OILS.

(FROM OUR CORRESPONDENT.)

Markets opened quietly after the holiday with little inclination to resume business. Inasmuch as there would appear to be adequate supplies of seed to meet future requirements, crushers are not eager to increase their holdings of linseed at present prices in view of the demand for the oil product. During July a fair trade was done in linseed oil for home consumption and export. Prices did not fluctuate very widely, and, as a matter of fact, closed for spot and near at exactly the same level as at the end of June. Speculation has to a large extent been eliminated, and prices may now be said to be governed by the ordinary law of supply and demand. Regarding the outlook for seed, Argentina, with a bumper crop estimated at round a million tons, had from January 1st to the third week in July shipped 385,000 tons to North America, 123,100 tons to the United Kingdom, and 108,000 tons to the Continent—in all, 617,100 tons, leaving a substantial balance for the United States to draw upon until their own new crop is harvested. From India only 60,000 tons have been shipped so far to the U.K. and 16,500 tons to the Continent, and, as the new crop is reported to provide up to 300,000 tons for export, it may be expected that much of this will ultimately find its way into our mills, being preferred to the Plate variety on account of its greater oil content.

Just before the holiday there was a revival in both cottonseed and cotton oil. Egyptian f.a.q., in the absence of offers, advanced £2 10s per ton, and Bombay appreciated in sympathy. Crude cotton oil was quoted £5, and edible refined £8 per ton dearer at Hull, and the demand reported satisfactory.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

Hides are finding their intrinsic value now that control is lifted, and at Thursday's Bermondsey auctions best ox realised 11½d-12⅛d, and seconds 9¼d-9½d, a very substantial fall on recent prices. Cows only brought 7d-9½d, and heavy calf 7¾d-9⅛d, whilst lights were 13¼d-17¼d. There has been little doing in foreign hides this week, owing to the holidays, but sales were reported to have been done before closing down in River Plates at 14¾d-16d, according to class and quality. The American market is cabled as dull, with best packers selling round about 28 cents, and dry hides selling very badly.

As far as trading in leather is concerned, there is nothing to report this week; merchants opened up toward the middle of the week, but found few orders in their letter-boxes except for a few filling up lines from retailers and repairers. Good sole leather remains high in price, but there is a quantity of low-grade sole on the market for which a low price would be taken. In upper leather business is stagnant, and tanners are getting anxious over the stock of dear leather they are accumulating.

In all the shoe centres factories have been closed down for the week owing to the large stocks on hand. Little is expected in the way of clearance until September, and most manufacturers regard export trade as impossible whilst exchange is so much against traders on the Continent.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, August 6.

There was a fair trade in some markets since business was resumed after the holidays, and prices moved upward in face of reserved offers from producing countries at dearer prices and a scarcity of second-hand sellers. Jute can safely be placed in this category, as, apart from any speculative influence, demand from spinners, both home and the near continent, marked a decided increase. This resulted in fair clearances on spot and also parcels close at hand. New crop received much better patronage, and rates here also responded. Trouble in the Philippines caused sellers in the London market to adopt reserved measures, and a firmer tone ensued. Copra and kernels, together with all other margarine-making commodities, took a sharp upward turn, and though attended by some slight irregularity, are both much higher on the week. The dominating factor for the upward move would appear to be the discounting of stringency in butter supplies in the near future and anticipated increased demand for the substitute.

SUGAR.—Market unchanged for vouchers, with fair allotments made. Free manufacturing parcels again dull and dragging, and the limited sales effected include crystallised West India at 127s to 130s; American granulated, 143s; white Mauritius, 141s; and ditto Java, 142s. Glucose quiet at 60s for liquid, on the spot. American syrup and also honey meet with but retail support.

COFFEE.—A steady demand continued for the finer home-trade qualities, and which realised full prices. Export kinds firm, but quiet. The terminal market keeps quiet, but rates improved slightly.

COCOA.—Market shows no improvement, and general situation is quite nominal.

TEA.—Market quiet, awaiting the resumption of public sales.

RICE in steady support, at recent prices. Rangoon bran slow.

SPICE.—Pepper in steady demand and market firmer, closing quietly. Fair black Singapore, spot, sold, 6d to 6¼d; ditto, August-October steamer, 6¾d to 6½d; Aleppy, spot, 7d to 7¼d; Tellicherry, 7¾d; white Singapore, spot, 11½d to 11⅝d; Muntok, 1s 0¼d to 1s 0½d. Cloves dearer, and Zanzibar, spot, sold up to 1s 7d. Pimento, spot, 4d. Tapioca firmer. Fair flake, spot, sold, 2½d per lb; ditto, August-October steamer, 24s; fair Penang seed, spot, 25s; August-October, 25s; small sago, spot, 33s to 36s, as to sample; sago flour, August-October, sold, 23s. Farina, August-October, 30s to 30s 6d; desiccated coconut spot, fine, cut, sold, 67s 6d, and medium, 80s.

"SWAN"
FOUNTPENS

Express your individuality when writing your letters. The "Swan" Pen lends itself to the writer and is always responsive to his or her moods. Its smooth gold nib glides over the paper without effort, expressing one's thoughts almost unconsciously.

Prices 12/6, 15/-, 21/-, 25/-, 30/- upwards.
SOLD BY STATIONERS AND JEWELLERS.
Catalogue post free on request.

MABIE, TODD & Co., Ltd., Swan House, 133-135, Oxford Street. London, W.1. Bra ches: 79 & 80, High Holborn, W.C.1; 97, Cheapside, E.C.2; 95a, Regent Street, W.1, and at 3, Exchange Street, Manchester. Paris, Brussels, Zurich, Sydney, Toronto and Cape Town.

JUTE altogether firmer, with reserved offers and a fair demand for both old and new crop. Native first marks assortment, approved lots, spot, sold, £46; subs, old crop, August-September, Antwerp, £41 10s; new crop, actuals, August-September, £49 to £51. Hessians steady, and 10-oz, spot, sold, 49s 9d. Twills dull, unaltered.

HEMP.—Manila firmer on the week on higher cables from the other side and also America. J grade, August-October, sold, £64 to £64 10s; K ditto, £54; and L, £53. New Zealand dull at late rates.

SHELLAC rather unsettled. Fair T.N. standard, spot, sold, 675s; August, 630s; and October delivery, 555s to 575s and 580s.

COPRA.—Market dearer, with few sellers. F.M.S. Straits, August-October and September-November, London, sold, £52 to £54 5s; Ceylon ditto, at £52 15s to £54 10s and F.M. Straits, August-October, Marseilles, at £51 10s to £53 5s. Palm kernels stronger, but slightly irregular. Most positions sold, £36 10s, £35 15s and £37.

MENTHOL dearer. Kobayashi-Suzuki, spot, sold, 35s. Peppermint oil, ditto, 8s 9d; aniseed, 4s, and slab camphor, 6s 9d per lb. Japan wax, spot, sold, 110s per cwt.

EGG PRODUCTS firm. Liquid yolk, new season's spot, sold, 90s; August-October, 97s 6d to 100s; liquid whole egg, spot, sold, 85s per cwt. Dried yolk, spot, 10d; native dried whole egg, spot, 1s; spray, 1s 10d; albumen, spot, sold, 4s 6d; and August-October, 4s 7d per lb.

RUBBER market steadier on the week, with a fair inquiry. Plantation crepe, spot, sold up to 1s 10¼d; August, 1s 10½d; October-December, 1s 11¼d to 1s 11⅜d; January-June, 2s 1d to 2s 2d. Sheet, spot, sold, 1s 8½d to 1s 9d; October-December, 1s 10d to 1s 11d.

METALS.—Tin, at the renewal of business last Tuesday, was a firmer market, and developed increased strength by the middle of the week, on active buying, cash fluctuating to £275 5s, and three months' to £280. The demand was well sustained at Thursday's market, while prices were again carried up rapidly, cash being done at £277 to £284, September to £285 10s, and three months' at £282 to £289. After opening stronger on Friday, a set-back attended values on realisations, cash being registered at £286 to £283, September dates at £288 to £285 10s, and three months' £290 to £288. English ingots £282 to £283. Copper: The standard market commenced rather steadier, while better supported during the middle of the week, cash being registered at £94 to £94 15s; September dates at £95 to £95 10s; and three months' £96 10s to £97 5s. The tendency was irregular and rather easier on Thursday, with dealings confined chiefly to three months' at £96 10s to £96 15s, down to £95 15s, and finally at £96 5s. At Friday's session, the market was rather less firmer, with less doing, August date being sold at £94, and three months' at £96 to £96 15s. Lead irregular, closing at £37 5s to £37 10s. Spelter dearer, while officially fixed at £42 5s to £43 10s. Antimony: Regulus, English, ordinary to best, £60 to £63. Aluminium: Home trade, £165; export, £185. Wire bars, £113 to £116.

OILS.—Linseed firmer. Spot, net, naked, 79s; August, 78s; September-December, 76s 6d. Rape firmer. Crude, spot, 75s; refined, 85s. Cotton dearer. Crude Egyptian, 65s; Bombay, 55s; refined edible, 85s. China wood firm. Hankow, spot (barrels), sold, 105s; July-August, 100s; and Hong Kong, spot, 102s. Palm kernel dearer. Crushed, spot, 77s; extracted, 76s. Palm firm. Softs, July-August, 61s; Lagos, 63s. Coconut dearer. Ceylon, spot, sold 86s; August-October, 84s; Cochin, ditto, 92s. Soya firm. Oriental, afloat and July-August, 69s; deodorised, 90s. Japan fish firmer. July-August (cases), 45s. Cod liver steady. English, spot, sold, 50s. Ground nut quiet. English crushed, naked, spot, 76s; deodorised (barrels), 95s. Turpentine irregular. American, spot, 160s; August, 154s 6d; September-December, 143s 9d. Rosin slow. American, grade B, 45s; F, 56s; G, 56s; K, 57s; M, 57s 6d; WW, 59s; French, F/G, 53s. H, 53s; WW, 54s; extra pale, 55s. Petroleum steady, quiet; American, spot, 2s 1⅜d; and water white, 2s 2⅜d per gallon.

OILSEEDS.—Linseed market firmer. Calcutta, afloat, sold, £38; August-September, sold, £38; Bombay, July-August, quoted, £39; Plate afloat, Hull, sold, £34 5s; August-September, £34 5s. Rapeseed dearer. Toria, August-September, Hull, sellers, £33; real bold Ferozopore, £32; brown Cawnpore, £30 10s. Cottonseed firm.

IN providing security against the desperate assaults of the scientific safe-breaker and the intense heat of a great fire, the wise man prepares for the worst, providing a degree of security which will meet every need.

Such protection is afforded by THE CHATWOOD SAFE—a triumph of steel and ingenuity—which from the year 1858 until the present day has afforded an impregnable stronghold to Bankers, Jewellers and Security Corporations throughout the world.

¶ **THE CHATWOOD SAFE BOOK**
containing over 40 pages and numerous illustrations describing in detail the various models—gratis and post free upon request.

A SHIPBUILDING SHARE ISSUE.

HAWTHORNS & CO., Ltd.

OF LEITH.

CAPITAL - - £250,000

divided into

250,000 Ordinary Shares of £1 each, of which 110,000 have been issued.

APPLICATIONS ARE INVITED FOR

140,000 Ordinary Shares of £1 each, at par.

The Company's engine works and building berths are situated at Leith, Edinburgh.

The Company's assets, including the proceeds of the present issue, exceed its liabilities by £348,626, and are considerably undervalued in comparison with current replacement cost.

The average net profits (after allowing for Excess Profits Duty) for the past three years have shown over 20% p.a. available for dividend and reserve and have been on an upward grade.

For 1919 a dividend has been declared at the rate of 20% and £10,000 carried forward.

The Company has assured the supply of all the steel required to maintain its maximum output. The business is rapidly expanding, and it is for the purposes of such expansion and consequent re-equipment, which have hitherto been largely paid for out of profits, that new capital is required.

INTERIM REPORT OF DIRECTORS for Half-year ended 30th June, 1920.

The Directors feel that a further report of events affecting the Company, of progress during the half-year just ended, and of prospects for the future, will be welcomed by Members.

The Company has suffered a loss by the lamented death of Mr N. Herbert Smith, who rendered important and valuable services to the Company.

Mr E. H. Cuthbertson has felt it necessary, by reason of his enforced absence from England during the greater part of the next twelve months, to tender his resignation, which has been accepted with regret.

Mr Isaac Hemmings, who has an extensive knowledge of the Steel Trade, has been co-opted to fill one of the vacant seats on the Board. Mr Hemmings' experience as organiser with some of the largest business undertakings in Great Britain will be very valuable to the Company in the intensive development of the selling side of the business. The other seat on the Board for the time being remains vacant, but will, it is expected, shortly be filled by the election of a gentleman of high standing in the Steel Trade

Great strides are being made with the constructional and other work in connection with the Steel Furnaces and Rolling Mills at Templeborough. The anticipated output of Siemens, Electric and Crucible Steels will be considerably in excess of the immediate requirements of the Company. Working arrangements have already been made with important interests for the disposal of the whole of the surplus, as and when available, on terms which should prove highly remunerative to the Company as well as satisfactory to customers.

Work on the new Gas Plant is also proceeding in a manner which meets with entire approval.

As the ultimate consumption of Gas by the furnaces and works at Templeborough as at present projected will be approximately 300,000,000 cubic feet per year, and the makers of the plant guarantee the cost of manufacture to be at the rate of 10d per 1,000 cubic feet, whereas the present cost of gas to the Company is about 3s 10½d per 1,000 cubic feet, the enormous saving resulting from making its own gas will be readily appreciated.

The new Stamp Shop, which will hold between 300 and 400 Stamps and Presses of the most modern type for the production of Stampings and Blanks for the many distinct and diversified classes of the Company's manufactures, will, it is expected, be in full operation in a few months.

From 1915 to the Armistice Templeborough, with its thousands of lathes and operatives, played a momentous and historic part towards victory. The major part of its main Factory floor space is already—six short months after obtaining formal possession—devoted to the no less valuable role in the interests of the country of securing for Sheffield Steel Products a substantial share of the World's trade in Cutlery and manufactures coming under the classification of "Sheffield Light Trades." The whole of the present Magnet, Scissors, Shear and Spanner Plants are already housed at Templeborough, and new Plant is being immediately brought into operation which will treble the output of Files.

Additional Plant for Table Knife making is also being laid down. This plant will, when in operation, increase the capacity from 5,000 dozen to 24,000 dozen knives per week, or about 15,000,000 knives per year. The output will then be approximately equal to 50 per cent. of the entire pre-war production of Table Knives in Sheffield.

As and when it becomes necessary the Plant for the Company's various products will be still further extended.

The Eagle Plate Company has, since the General Meeting, been established, and has already passed from the development into the productive stage. This business is complementary to the Table Knife Department, and is producing spoons and forks on a bulk production basis. It is also engaging in the Silver and Plated Hollow Ware trade. Excellent results are expected from this business—results such as will yield a highly satisfactory return on the comparatively small outlay involved.

As an illustration of the advantages accruing from the ownership of Oxley Brothers, Limited, part of the Company's Rolling Mill Plant cost at their Foundry is already completed. Had the Company been compelled to go to the market for this plant it would not have had delivery before the beginning of next year at the earliest. This achievement in itself provides justification for the acquisition of the Foundry, and is only one of the many instances of benefit to the Company which could be quoted.

The foregoing will give an idea—if an inadequate one—of what has already been accomplished towards the concentration of the whole of the operations from the raw material to the finished product on a centralised site. Even under existing conditions costs are such as to enable the Company to meet any competition from whatever quarter it may come, and the economies which will necessarily result from the entire elimination of some, and the great reduction of other, overhead charges, when the scheme has fully developed, in themselves provide the warranty—if such be needed—for the unbounded faith of the Directors in the great potentialities of the Company.

The Directors are conscious that to maintain and extend the Company's markets—as they mean to—enlightened, efficient, and human management is essential. Their one aim is so to conduct the business that the name of "Sheffield Steel Products, Ltd.," shall become a household word in every quarter of the civilised world. This can only be achieved by acquiring a reputation for excellence of the Company's commodities, combined with prices which will be attractive. An important and vital part of the policy of the Board will be to adopt new methods when they are proved to be an improvement on the old, and ruthlessly to sweep away all machinery and plant as it becomes obsolete and out-of-date.

In keeping with the policy of consideration for the welfare of the Company's employees the Directors have purchased, or made arrangements under which they will have control over a total of nearly 400 substantially built houses within a distance of 500 yards from the Factory. The houses purchased have been acquired at an outlay of about one-fifth of the present cost of erection of similar dwellings, and comprise an asset which should show a considerable capital appreciation in the near future.

The Staff and workpeople and all connected with the Company have worked wholeheartedly in its interests, and it should be gratifying to Shareholders to know that the older factories of the Combination have again proved their ability to earn during the six months more than sufficient to warrant the Directors in declaring an interim dividend at the rate of 10 per cent. per annum, warrants in payment of which accompany the Report.

The Directors confidently anticipate obtaining during the latter part of the current year substantial returns from the new plant already installed at Templeborough, thereby materially adding to the profits available for distribution.

It is a source of satisfaction to the Directors to be able to say that as the new plant comes into operation, and the output becomes greater, the demand for the Company's manufactures, which are all articles in everyday use, and therefore, having of necessity to be replaced periodically, more than proportionately increases. This speaks well for the continued success of the Company, and justifies the confidence with which the Directors regard the future of this vast undertaking.

THE MONEY MARKET.

IN the early days of the week fears of a rise in Bank rate were prevalent enough to keep the market rate firm at $6\frac{3}{4}$ per cent., but later on the impression grew that international complications were likely to stay the turn of the screw, that Treasury bills were being taken up more freely, that Ways and Means advances were consequently being paid off, and that currency was coming back from circulation or being sent in by the banks to ease the position. The returns published on Thursday confirmed these hopes, and though the Bank of England's figures are still, in spite of the improvement, far from ideal, the announcement of no change in Bank rate was fol-

lowed by a keener demand for bills, especially those of short currency, at easier rates. The continued abundance of money was rather puzzling (like so many other things), in view of the reduction in the Bank's holding of securities.

* * * *

The Bank return showed decreases of £40,000 in the stock of gold and £961,000 in the note circulation, and a consequent increase of £921,000 in the reserve. Government and Other Securities ran down by 8 millions and 1 million respectively, and so the total deposits were 8 millions lower, most of the decrease being in Other. There was a reduction of £3,287,000 in the circulation of Currency Notes, which, including £6,187,700 for notes called in but not yet cancelled, amounts to £363,393,300. The reserve of gold and bank notes is unchanged at £47,100,000, so that the fiduciary issue is now £316,293,300, or £4,306,700 below the maximum.

* * * *

The following table shows Public Income and Expenditure for the week ended August 7, 1920 :—

Receipts.	Mln. £	Expenditure.	Mln. £
From Revenue	18·638	Supply Services	13·436
Taken from Exchequer balances	86	Interest on Debt	7·279
Amount borrowed	2·001	Sundries	·010
	20·725		20·725

These operations increased the debt by a sum of £2,000,608, and caused the following changes, which are reflected in our table of National Debt given in another column :—

	Mln. £		Mln. £
Treasury Bonds	+ ·270	Treasury Bills	— 11·561
National Savings Certificates	+ ·100	Surrenders of Bonds, &c.	— 1·308
Bank of England advances	+ 13·000		
Advances by Public Departments	+ 1·500		
	+ 14·870		— 12·869

Property and income-tax brought in £6,413,000, while Customs and Excise contributed £3,590,000. Excess profits duties brought in £4,762,000, and special receipts under Miscellaneous amounted to £1,619,069. The floating debt was increased by just over £3 millions.

* * * *

In spite, or perhaps rather as the result, of the obscurity of the political horizon, the more important exchanges show little change on the week as a whole. Business in general has been dull, the volume of dealings being much smaller than that to which we have been accustomed in the last few months. New York yesterday at 3.63½ was slightly more favourable to London than a week ago, and Paris at 50.30 almost exactly the same. At the same time, although rates have ended the week much as they began, quotations have been very erratic, the dollar having at times been over 3.70 and then again not far short of 3.60. Owing to the continued tightness of money in America, there has been a considerable offering by New York of spot sterling against the purchase of forward, with the result that the spread between spot and futures has widened from ¼-⅜ of a cent per month to about 1 cent per month above spot. On the whole, however, the value of sterling has been favourably influenced by the excellent showing of the July trade returns, and by a growing impression that satisfactory arrangements are being made by France to meet its share of the Anglo-French Loan. The franc, although for a short time it fell to slightly below 50.00, has on the whole moved within narrow limits, and up to the present the market has remained surprisingly indifferent to the possible results of the action of the French Government in recognising General Wrangel. The spread between spot and futures remains unchanged at about 15 centimes per month below the spot quotation. Berlin, after weakening to slightly above 170, is back again at 168, about 2 marks above last week's quotation, and futures are quoted unchanged at about ¼ mark per month below the spot price. With the exception of Madrid, which has moved slightly against us, and Switzerland, which is almost unchanged, the majority of neutral exchanges have gone in our favour. Amsterdam, at 11.00, is some 10 points higher, while forward florins are still quoted at about 3 points per month below spot. In the Scandinavian exchanges the most striking movement is that of Norwegian kroner, which have moved up from 23.58 to 24.13-17, partly on account of the continued uncertainty as to the financial situation in Norway, and partly, it is said, through transactions by Norwegian shipowners. Finnish marks, at 115-120, as compared with 110 a week ago, have continued to depreciate in value, as also have Austrian kronen (700-720 as compared with 675). Silver has fluctuated during the week, largely in connection with the American exhange, being about ½d higher at the end. Shanghai, at 5s 9d, is unchanged, Hongkong 1d lower at 4s 1d. Rupees have moved again slightly in our favour, being ⅛d cheaper at 1s 10¾d.

EVENTS OF THE WEEK.

August 8th.—Soviet rejects British proposals for 10-days' truce. British and French Premiers confer at Hythe.

August 9th.—End of Hythe Conference. Irish Bill passed.

AUGUST 10TH.—Premier's statement on Russia and Poland. Bolshevist peace terms announced in Commons. Turkish Peace Treaty signed.

AUGUST 11TH.—French Government recognises General Wrangel's administration in South Russia. Russians within 35 miles of Warsaw. Mr Chamberlain announces decision to end bread subsidy before the end of the financial year.

AUGUST 12TH.—America refuses to recognise Soviet or to agree to the dismemberment of Russia. Excursion trains resumed. Higher goods rates announced for September 1st. Delegates of Miners' Federation decide to ballot on strike for 2s wage advance and reduction in price of coal.

THE INTERNATIONAL TANGLE.

PUBLIC opinion has not been very greatly perturbed by the international events of this week, centred round the question of Poland, because it has generally regarded them as silly rather than serious. Certainly we and our French Allies have between us provided a sorry spectacle by holding prolonged conferences concerning a highly important matter, arriving, according to the Prime Minister, at "complete agreement," and then taking inconsistent action. Whether this was owing to misunderstanding or bad temper, the fact that it happened is equally deplorable, and gives much justification to the Bolshevik Government's mistrust of the Western Powers. At the same time, the difficulties that have arisen with regard to the negotiations between Russia and Poland have shown that there also there have been bad blunders, or bad temper, or worse. All this muddle has produced a tangle which may have the gravest possible consequences, and yet public opinion may be right in its optimism, since there is a good deal of make-believe about the whole business. Anything like a revival of war on its recent scale is impossible, and what is wrong about Europe is that, though too much exhausted to fight vigorously, it is too bad tempered to make peace heartily. Even where fighting is alleged to be proceeding, it is said that the operations are more like manœuvres than a battle—the opposing forces roughly count heads, and the less numerous army retires; and this system of warfare is much in favour of the Bolsheviks, since they are stronger in cavalry. In the same way the French decision to support General Wrangel is to a great extent an empty thunderbolt, since the power of the French Government out of its own resources to make that support effective is clearly limited by the readiness of the French people to make further sacrifices for the sake of what may well seem to it to be a wild-goose chase. At home it did not need a threat of direct action by Labour leaders to show the Government that the nation does not mean to go to war again, as war was understood two years ago. If the Bolsheviks are foolish enough to treat Poland in a way that really outrages public opinion, both they and the Labour leaders may be surprised at the readiness of the country, especially of those whom the Labour leaders are alleged to lead, to send naval and material help to Poland. But we have not yet arrived at that point.

In the meantime, common sense and common honesty seem to be badly needed in the international conduct of affairs. The Prime Minister, in his very effective speech in the House last Monday, was easily able to show, on high Socialist authority, that the Bolshevik Government is not democratically founded; but he produced no good ground for being still more or less at war with it, or for refusing it recognition. And for the French, who have so much to gain from Russia's economic recovery, it seems to be a most questionable policy to bolster up the Bolshevik Government by enabling it to pose as Russia's champion against foreign aggression. Our own Government is still, in spite of widened suffrage, far from democratically founded, and this dangerous fact goes far to account for, if not excuse, the unconstitutional action of the Labour Council of Action. If we, with a Government elected on a coupon basis, refuse recognition to the Bolshevik Government because of the methods by which it has seized power, we cannot be surprised if it is ill-mannered and aggressive in its behaviour. What we need is real peace all over the world and at home. The Prime Minister said at a Coalition Liberal lunch on Thursday that "no living man has ever before witnessed such a condition of things in the world—half Europe in a state of revolution or semi-revolution, starvation or semi-starvation." If this is so, it seems to be high time to make peace, in fact as well as on paper, and to try to repair the world's damages. The Bolsheviks are said to threaten to subvert society. They can only do so if society helps them, and the inability of Europe's leaders to make peace is helping them every day.

THE TREASURY BILL PROBLEM.

EXPECTATIONS of dear money used in pre-war days to be a hardy annual that could be trusted to bloom in August, when the drain of sovereigns to Egypt used to begin or be expected, and the movement of the American crops threatened dear money in New York, a flood of bills on London and an adverse movement in exchange culminating in gold exports and a rise in Bank rate. Thus there is an almost pleasant old-time flavour about autumnal monetary anxieties; but on this occasion they are accentuated if not largely caused by a new factor which is a direct legacy of the war and of the unsound methods which were used to finance it. This is the existence of a monstrous floating debt, the creation of which, in spite of persistent protests by our bankers, our war-time rulers believed themselves to be unable to avoid. Its existence means that its holders have, as things are at present arranged, the power to widen the basis of credit by letting Treasury bills mature, and so compelling the Government to meet them by the creation of Ways and Means advances from the Bank of England. The effect of this process is that the holders of the paid-off Treasury bills are given new credit at the Bank of England, and so the holdings of the other banks of "cash at the Bank" is increased, and can be used either as such, or in the shape of notes taken out against it, as the basis of proportionately larger amounts of credit given to customers. In other words, the holders of Treasury bills can compel the further expansion of credit, the checking of which is agreed—except by those who really believe that the world can be made richer by manufacturing more instruments of payment—to be essential to a return to economic sanity. This power in their hands puts the Bank of England as regulator of the money market into a difficult position, and also makes the Treasury minute, which tried to set a limit on the fiduciary issue of currency notes, a document of doubtful value. This, indeed, is shown already by the bookkeeping ingenuity that has been exercised to make the fiduciary issue look smaller by ignoring notes outstanding because they have been called in.

From Lombard Street's point of view the worst nuisance involved by the Treasury bill problem arises because in April last, when holders found it inconvenient to renew them, a rise in the rate at which they were offered, accompanied by a rise in Bank rate, was the remedy applied by the authorities. Hence, whenever there is a balance of maturities over sales of Treasury bills there is a fear of a rise in Bank rate, and whenever there is a fear of a rise in Bank rate holders of Treasuries prefer not to renew, and another vicious circle is set up, and the market is thus subject to constantly recurring tremors which arise owing to the embarrassments of the Treasury, a borrower whom no rise in the charge made for loans will check, and the guesses that have to be made at the consequent action of the authorities. Such a situation has been preying on the nerves of the City this week, and it seems very likely that if Poland had not come to the rescue by providing good reasons for not jolting the credit machine, a rise in Bank rate to 8 per cent. would have been announced. For a time more Treasury bills would have been sold, not so much (if at all) because of the high rate as because the fear of a rise would have been removed for the time being; and later on the same situation would probably have arisen again, and the old vicious circle would have resumed its gyrations.

Where is this process to stop, and does it do any good on balance? It raises the price of financing the floating debt, makes the stock markets weak, and so affects the price of new capital, and it raises the cost of production and distribution of goods. On the other hand, it certainly tends to make those who are holding up goods more eager to market them, and it is said that goods are, owing to the E.P.D., being held up now in considerable volume. It may, perhaps, stimulate saving, but this is very doubtful, owing to the depreciation that it causes in the existing prices of securities, and the general feeling of uncertainty that it produces. What is wanted is to check the expansion of credit, and to stimulate the creation of capital. So far, dear money can hardly be said to have done much in either direction. Its advocates no doubt contend that this is because it has not been made dear enough. They may be right, but it would be interesting to know where it may be expected to begin.

What, then, has to be done? It does not seem possible to limit the power of the Treasury to raise Ways and Means advances from the Bank of England. It must be able to meet Treasury bills that mature. Treasury bills might be made more attractive by making the rate on them vary with changes in Bank rate during their currency, by a return to the system of varied dates, and by making them more easily accessible to small buyers, especially those who have to save against income-tax payments. Most people with moderate incomes are now putting by small amounts each month towards next January's demands by the taxgatherer, and do so by leaving money on deposit. If bills of £100 or £50 were available for them, the pressure of direct taxation, now exerted in the last quarter of the year, would be spread, and a small but steadily receptive outlet for bills would be opened. But these changes would have an almost negligible effect in view of the total volume of Treasury bills, and an increase in their volume is the last thing that is desirable. It is better that they should be renewed by any method than that they should have to be met by the creation of Ways and Means advances with the expansion that it implies in the basis of credit; but what is really wanted is that the volume of Treasury bills should be reduced by saving, encouraged or enforced by a really attractive funding scheme or by taxation, or effected by the Government in its programme of expenditure. It is too late to secure the latter in the current financial year, though the early abolition of the bread subsidy, announced by Mr Chamberlain on Wednesday, is a step in the right direction; but it is not too late for funding. In a later article a scheme is described for a forced loan put forward by a distinguished Italian statesman. His scheme, which seems to involve large borrowings from banks of money to be applied to ordinary expenditure, has the drawback of threatening further inflation. This danger would be much less likely to arise in the case of a loan raised for the reduction of floating debt, and a forced loan has the support of highly distinguished City opinion.

A FORCED LOAN PROPOSAL FOR ITALY.

In a pamphlet on "The Financial and Economic Reconstruction of Italy," recently published, the Marchese Raffaele Cappelli, formerly Vice-President of the Chamber of Deputies and now a Senator, proposes that a forced loan should be raised with interest at 2½ per cent., and sinking fund also of 2½ per cent. per annum. A syndicate (*consorzio*) of banks would not only help the taxpayer in regard to the necessary formalities, but would advance money to those to whom it was not convenient to make the payments. The bank making the advance would take the loan certificate furnished by the State as security for half of the payment made on behalf of its client. For the other half the bank would require its client to give further security. This could take the form of a mortgage on lands possessed by him, the deposit of articles of value, a life insurance policy, or the assignment of a fifth of his salary.

By means of the sinking fund of 2½ per cent., the debt would be completely redeemed in 40 years, but the repayment might, in fact, take place much earlier. During the first few years the loan would be worth on the stock exchange only 50 per cent. of its nominal value, or perhaps slightly more, and therefore the sums set aside for sinking fund would redeem twice the nominal amount, or a little less. If the total amount of the loan were 20,000,000,000 lire, about 1,000,000,000 lire would be redeemed in the first year, the State only paying 500,000,000 lire. Moreover, the market value of the new 2½ per cent. loan would soon increase, as it would be much favoured for the investment of savings on account of its quick redemption. Hence the taxpayer who had carried out the operation through the medium of a bank would be able, when the market price of the loan had sufficiently increased, to pay to the bank the difference between the nominal and the market price, and, with a comparatively small sacrifice, would redeem the security given and free himself from any debt to the State or to the bank.

The proposed system would give great facility to the taxpayer in making the required payment, while the State would receive the whole sum in a few years from the syndicate of banks, without having recourse to distraint or other vexatious proceedings. The taxpayer would only have to pay annually to the bank 2½ per cent. on the sum advanced, the other 2½ being assured by the loan certificate.

Even supposing that the heavy contributions proposed by the committee of July, 1919, were enforced, the scheme would involve, for example, payments on these lines:—

Capital, 20,000 lire. Contribution, 5 per cent.=1,000 lire. Annual payment to the bank, 2½ per cent. on 1,000 lire=25 lire per annum.

Capital, 1,000,000 lire. Contribution, 12 per cent.=120,000 lire. Annual payment to bank, 3,000 lire.

Capital accumulated during the War, 100,000,000 lire. Contribution, 80,000,000 lire. Annual payment to bank, 2,000,000 lire.

These payments, even that of the double contribution on fortunes accumulated during the War, could be paid without serious inconvenience, and, therefore, without great resistance on the part of the taxpayers and without desperate attempts at evasion.

The Marchese argues that while it is true that the State would have to pay, as long as the new debt remained unredeemed, a sum (large at first, but rapidly diminishing) in respect of the interest and sinking fund, it would have the following advantages, which would amply compensate it for this payment, which it does not incur in raising a tax on capital:—

(1) It could increase the contributions, without danger of causing a crisis, even raising them, without frightening anyone, nearly up to the contributions proposed in July,

The Liberty National Bank
of New York

Accepts deposits drawing interest from foreign banks, firms and individuals.
Buys and sells drafts, and cable transfers on foreign countries.
Furnishes credit and trade information to foreign firms desiring to buy or sell in the American market.
Finances foreign shipments, secures customers against loss in exchange subject to approval of the transaction.
Buys and sells American and foreign securities.

British Bank of Northern Commerce, Ltd. *Barclay's Bank, Ltd.*

1919, which proposals have driven out of Italy many thousands of millions of lire.

(2) It could extend considerably, without causing much complaint, the incidence of the tax or loan. The method of payment being so easy, there would be no reason why those who enjoy large salaries, pensions, or allowances should be exempted from this extraordinary contribution, except, perhaps, that it would be necessary to arrange that their heirs or themselves should cease to pay to the bank, and the bank to the State, in case of death or loss of the source of income.

(3) There would be much less resistance on the part of the taxpayer, and even comparative indifference, particularly in the case of the smaller contributors, to an excessive estimate of capital. The small property-owner whose lands were estimated at 30,000 lire instead of 20,000 lire, would readily resign himself to paying 37½ lire per annum to the bank instead of 25 lire, and the small shopkeeper might even be pleased if the value of his business were over-estimated. The Marchese Cappelli is of opinion that by the method which he proposes it would be possible to obtain 50 per cent. more than by the most rigidly enforced tax. He also contends that in view of the need of enormous capital for development in Italy, everything should be done to avoid frightening capital, and he urges that in this respect his proposal has great advantages over the tax on capital. The proposal is open to objection on the ground of the increased inflation that it seems likely to involve, at least for a time, and income seems to be a much fairer and simpler basis for assessment than capital; but some such scheme is well worth considering, for Italy and many other countries.

OVERSEAS TRADE IN JULY.

The Board of Trade Returns of our overseas trade in July contain a very pleasant surprise. On the published figures for that month the excess of imports was reduced to £8 millions, a figure actually below the average monthly excess in pre-war days. As compared with June, British exports are nearly £21 millions higher, and imports over £7 millions lower, re-exports being £2.3 millions less. British exports at £137.5 millions compare with £47.2 millions in July, 1913, and £65.3 millions in July of last year. July imports at £163 millions compare with £153 millions and £61.8 millions for July, 1919, and 1913 respectively. A summary of the value figures for July and the seven months of this year and last reads as follows :—

Month of July.

	1919.	1920.	Increase or Decrease in July, 1920.	
	£	£	£	%
Imports	153,065,760	163,342,351	+ 10,276,591	+ 6·7
British exports	65,315,691	137,451,904	+ 72,136,213	+ 110·4
Re-exports	11,757,114	17,848,479	+ 6,091,365	+ 51·8
Total exports	77,072,805	155,300,383	+ 78,227,578	+ 101·6
Excess of imports over total exports	75,992,955	8,041,968	— 67,950,987	— 89·5

Seven Months Ended July 31.

	1919.	1920.	Inc. or Dec. in 1920.	
	£	£	£	%
Imports	869,652,875	1,196,328,966	+326,676,091	+ 37·5
British exports	400,071,823	774,918,788	+374,846,965	+ 93·1
Re-exports	67,191,409	153,739,527	+ 86,548,118	+ 128·8
Total exports	467,263,232	928,658,315	+461,395,083	+ 98·6
Excess of imports over total exports	402,389,643	267,670,651	—134,718,992	— 33·4

July's increase in British exports as compared with a year ago is made up of £1.9 millions under food, drink, and tobacco, £1.6 millions under raw materials and articles mainly manufactured, and £67.9 millions under articles wholly or mainly manufactured. The chief individual contributors to the last-named increase were cotton yarns and manufactures (+£21.4 millions), iron and steel and manufactures thereof (+£8.8 millions), vehicles (+£6.3 millions), woollen and worsted yarns and manufactures (+£6.1 millions), machinery (+£4.6 millions), apparel (+3.4 millions). Turning to details, one finds the following examples of the degrees to which increased volume and higher prices respectively contribute to the swollen value figures :—

British Exports in July.

	1919.		1920.	
	Volume.	Value.	Volume.	Value.
	Yards.	£	Yards.	£
Cotton yarns	13,626,700	2,507,198	15,320,800	5,128,344
Cotton piece goods	276,106,500	14,080,310	395,199,600	30,335,438
Worsted tissues	2,686,300	995,562	*8,317,500	2,943,427
	Tons.		Tons.	
Railway material	20,512	442,958	42,148	1,169,871
Wire & wire manufactrs.	4,890	346,446	13,873	965,789
Pig-iron	23,300	285,552	63,964	1,221,868
Galvanised sheets	14,895	497,150	51,214	2,625,688
Tubes, pipes, & fittings	11,166	467,389	24,742	1,098,992
Textile machinery	6,525	791,366	6,721	917,669
Total of machinery	26,238	2,720,428	54,752	7,344,067
	Doz. pairs.		Doz. pairs.	
Boots and shoes	51,798	350,862	110,738	825,599

* Square yards.

In most of these cases prices have played their part, but the volume exported has generally risen by a very large percentage. The feature of the imports account is that the total value was £7.1 millions lower than in June, although July contained two more working days than June. As compared with a year ago, imports were £10.2 millions higher, imports of articles wholly or mainly manufactured being up by £16.5 millions, and raw materials and food, drink, &c., being £2.4 millions and £3.7 millions lower respectively.

Last January the *Board of Trade Journal* made an estimate of invisible exports, to which we have referred on several occasions. In the current issue our official

contemporary examines the trade figures for the first half of the year, and attempts a calculation of the real balance of trade for the first six months and for the full year. Taking coin and bullion as well as merchandise and invisible exports into the calculation, it is estimated that the real export balance for the first half of 1920 was £70 millions, and for the second half of the year will be £110 millions. These balances are made up as follows :—

	Jan.-June. Mil. £		July-Dec. Mil. £
"Invisible exports"—			
Net income from investments abroad	60	....	60
Net shipping earnings	230	....	210
Other services	20	....	20
	310	....	290
Excess of imports of merchandise, coin, and bullion	240	....	180
	70	....	110

That would mean that this country is gaining a surplus of £180 millions per annum available for investment abroad or for the extinction of external debt. If this is a true picture of the trend of our overseas commerce, the recent collapse in the dollar exchange appears at first sight curious. But two important facts have to be remembered. First, that the fall in the New York cable rate is largely attributable to large preparations for financing heavy seasonal imports in coming weeks, and secondly, that an important proportion of our export trade is carried on with war-worn countries, with whom long credit of necessity takes the place of prompt payment. The July returns include statistics of the origin and destination of imports and exports, which we propose to discuss later. Below we append detailed tables, as usual :—

IMPORTS (Value C.I.F.).

	Month Ended July 31.		Seven Months Ended July 31.	
	1919.	1920.	1919.	1920.
I.—Food, Drink, and Tobacco—	£	£	£	£

Business Notes.

Railway Freight Increases.—In our issue of July 31st we explained in some detail the increased railway passenger fares, which were put into force on August 6th. The recommendations of the Rates Advisory Committee with regard to charges for goods traffic are now available in a White Paper (Cmd. 886, price 2d). The total deficit to be met in the period from April 1, 1920, to July 31, 1921, is taken as £66,000,000, of which it is estimated that the increased passenger fares will bring in £17,000,000, leaving £49,000,000 to be produced in Great Britain from the rates and charges for the carriage of minerals, merchandise and live stock by goods and passenger trains. This amount must be raised in 11 months; therefore the new increases had to be framed to yield £53,500,000 in a full year. The railway companies submitted proposals for goods traffic charges estimated to bring in (on the basis of 1919 volume of traffic) an additional £43,800,000. But evidence of a 10 per cent. increase in traffic during the first half of 1920 causes the Committee to raise this figure by £4,380,000. The addition of £3,750,000 for increased cloak-room charges and charges for goods by passenger train, and of £2,800,000 to be derived from dock undertakings, makes the total estimated to be forthcoming, if the companies' proposals were adopted, £54,730,000. Generally speaking, the companies' proposals are for a 100 per cent. increase over rates in force before the advance made on January 15, 1920, the exception being a suggestion of 200 per cent. on "returned empties" and 150 per cent. on the carriage of "smalls." In the main

the Committee adopts the companies' proposals, but reduces the 200 per cent. on "returned empties" to 100 per cent., and makes other small concessions, notably in favour of manure ingredients, cloak-room charges, bicycles, and typewriters. "Exceptional rates" are to be carefully reviewed, and the companies are asked to submit proposals. As regards Ireland, which is separately considered, the general level of increase in rates is to be 120 per cent. The new rates recommended are to come into force on September 1st. They are temporary, and will be reviewed later on in the light of results. The Committee feels that it has dealt lightly with passenger fares as compared with goods rates, and thinks that, "subject to anything that may occur in the meantime, goods rates will have a special claim for consideration when the time comes for readjustment next year."

Coal Output.—The production of coal for the week ended July 31st shows some improvement on the previous week, and is a trifle above the average for the past fifty-two weeks. The weekly output during the past four months is set out below :—

	Tons.		Tons.
April 3rd	3,979,747	June 5th	4,718,183
April 10th	3,337,793	June 12th	4,769,824
April 17th	4,833,072	June 19th	4,873,737
April 24th	4,989,666	June 26th	4,685,524
May 1st	4,564,564	July 3rd	4,734,651
May 8th	4,674,302	July 10th	4,676,328
May 15th	4,860,668	July 17th	4,665,546
May 22nd	4,830,707	July 24th	4,284,419
May 29th	3,199,947	July 31st	4,555,100

The output for the year ended July 31st was 233½ million tons, giving a weekly average of about 4.5 million tons. This compares with a weekly average of 4.7 million tons for the five years 1915-19, and 5.2 million tons for the five years 1910-14.

The New Transfer Stamp Duty.—The doubled transfer stamp duty of 20s per cent. *ad valorem* will come into force on September 1st. On about the same date the increased rates of Stock Exchange commission will be levied, on the lines mentioned in last week's *Economist,* unless they are not confirmed on August 23rd. The extra brokerage rates affect stocks, but the doubled transfer stamp applies to stocks and shares alike. Its influence will be felt unfavourably by gilt-edged stocks, such as Home Railway prior charge issues and others that are transferable by deeds demanding stamp duties. Such inscribed and registered securities as pass without stamped transfer deeds—the War Loan and National War Bonds, for instance—may benefit in popularity at the expense of the stamp stocks. The 1 per cent. instead of the present ½ per cent. duty was proposed in the last Budget, but technical difficulties have prevented its being brought into active operation. All transfer deeds bearing dates up to the end of this month will require the stamp duty of ½ per cent. Transfers dated September 1st and later must be stamped with 1 per cent. The change raises several knotty points. It will involve rulings by the Stock Exchange Committee, and these may be expected next week. The main issue will centre around the latest date at which a client can claim that his purchase of stock shall come under the ½ per cent. transfer stamp. Were he to buy on August 30th, it would be unreasonable of him to expect delivery on August 31st, and therefore he will be charged the full new rate. The Stock Exchange Rules allow a seller ten days in which to deliver. If the Committee proceed according to this Rule, they must make buyers liable for the 1 per cent. from August 22nd. Were the transfer to be delivered earlier than this, it would need only ½ per cent. stamp duty, and the buyer would be entitled to the return of an equal amount if he had been charged in full. It will be to everyone's advantage to press transfers forward as much as possible before September 1st, although, with so many clients away on holidays, there are bound to be delays which may prove expensive. The date on the transfer deed is to govern the amount of duty required, but numbers of people have a very hazy idea as to whose signature—buyer or seller—the date refers to. Special and generous concessions are made by the Act in respect to stocks and shares taken up by Stock Exchange dealers in the ordinary course of their business, but these do not affect the public in any way.

The Crops.—The monthly report of the Ministry of Agriculture and Fisheries states that in all parts of the country July was a very wet month, and haymaking and root-cleaning were much delayed. Crops in general have suffered, and are not so promising as a month ago. All crops are much in need of more sun. Many of the heavier crops of corn, especially winter barley and oats, have been beaten down, so that they will be difficult to harvest, and will ripen slowly. The prospects of wheat and barley have not deteriorated to any appreciable extent in the eastern and some of the northern counties, but in the west these crops do not promise so well as a month ago. Wheat is generally healthy, but the yield is expected to be slightly under average. Barley seems to have suffered least of the three chief corn crops, and should now give relatively as good a yield as wheat. Oats are still stunted in growth in many districts, and in the west and north generally will give poor yields, but the eastern counties should harvest nearly average crops. Some winter oats have been cut. Beans promise quite as well as a month ago, and should give an over-average yield. The later pods have not filled well in the case of peas and prospects are not quite so favourable as last month, but average yields are still hoped for. In practically all parts of the country potatoes do not promise so well as at the beginning of July. Disease has become fairly prevalent in the south, especially in the south-west, where the yield will now be very poor. In some parts of Lincolnshire there is a good deal of disease. Elsewhere, though there are frequently some signs of disease, the crop is usually healthy, and the haulm has made strong growth. In Lancashire potatoes on low-lying land have suffered from the wet, and the crop will be light. Early crops have generally yielded fairly well. Turnips and swedes are a good plant, and have grown well in some districts, but generally the younger plants have been checked by the cold and wet, and have made little progress. Mangolds are patchy, having been damaged by fly. This crop has grown fairly well during July, but only a poor yield can be hoped for. The wet weather has made it difficult to use the hoe among the root crops, and weeds are much more prevalent than usual. Haymaking has been very protracted, and is still far from finished in most districts. Crops of seeds' hay which were secured early were carted in good condition, but most of that harvested during July has been damaged by rain. In many districts quite half the meadow hay is still uncut, and the quality is consequently deteriorating, as the crop is often laid and rotting at the bottom. Much of that which has been cut has been damaged. Yields are generally heavy, especially of meadow hay. Summarising the returns, it would appear that beans, hops and hay will be the only crops to give over-average results. Expressing an average crop by 100, the appearance of the crops on August 1st indicated probable yields per acre shown by the following percentages :—wheat, 98; barley, 98; oats, 95; beans, 103; peas, 100; potatoes, 95; turnips and swedes, 98; mangolds, 92; seeds' hay, 103; meadow hay, 105; and hops, 102. In the case of hay, it must be remembered that a proportion of the crop has been so damaged as to be unfit for use.

Indian Currency and Exchange.—A correspondent writes :—The *Times* of August 7th gave particulars of a meeting of the Bombay and Bengal Chambers of Commerce and Indian Merchants' Chamber and Bureau, at which the Hon. Mr W. M. Hailey, Indian Finance

Minister, outlined the definite policy of the Government of India, or, rather, made clear its indefinite character. It is doubtful whether the Currency Committee would have recommended the attempt to fix the rupee at 2s gold, unless under the terms of their reference they had been requested to make a prompt decision, with the object of securing immediate or early stability; but we are now told by Mr Hailey not that stability can be hoped for at any definite date, but that the *ultimate* objective of the Secretary of State's currency policy is the establishment and maintenance of a 2s gold rate, which to-day would mean over 2s 8d sterling, and that in the meantime the Secretary of State will sell Council drafts, when the demand for them recurs, to suit his own convenience, whilst the Government of India will not sell Reverse Councils at above the 2s sterling basis. In endeavouring to estimate the probable practical effects of this declaration of policy and its influence towards stability, it is well to remember that the Secretary of State may be *obliged* to sell Council drafts long before the 2s gold parity is established, in order to meet sterling obligations, and when the necessity to sell arises he may have to accept the best rate offered. The announcement regarding Reverse Councils is also disappointing, as Mr Hailey makes no promise that the Government will sell them at 2s to the full extent of the demand, and, failing this, the Government policy will certainly not prevent the rupee from falling *below* 2s sterling during periods of exchange weakness. It would appear, therefore, that the realisation of the ultimate objective of the Secretary of State's currency policy may be expected at some problematic date; in fact, that it may never materialise, and those who are pecuniarily interested in the exchange value of the rupee must be prepared for a continuance of fluctuations, regulated by numerous factors, the net effect of which cannot be foreseen, although it may be expected that they will be less violent than they have been, until the Government of India drops another bomb into the market.

Cotton Mill Promoters and Taxation.—Our Manchester correspondent writes:—In Lancashire cotton trade circles this week a good deal of interest has been aroused in the report that the Surveyors of Taxes in certain towns are making an attempt to assess for taxation the profits made by persons who have recently been active in buying cotton mills and floating new companies. As is well known, in the boom of the last 12 months large fortunes have been made by certain individuals. It seems to be contended by the Inland Revenue Authorities that where a person has been interested in more than one deal he can be described as a company promoter. On the other hand, it is held by certain experts that the profits made are "casual," and cannot be taxed any more than money made as profits in the buying and selling of shares on the Stock Exchange. If action is taken by the Revenue Authorities many people in Lancashire will be affected, and the outlook is rather alarming for certain gentlemen who have been members of the leading syndicates that have carried out extensive deals. It is probable that before the matter is settled a test case will be heard in the Law Courts.

Anglo-South American Bank.—It is announced that a controlling interest in the Chilian banking house known as Banco de A. Edwards y Cia, of Valparaiso and Santiago, has been acquired by the Anglo-South American Bank. The bank, originally a private institution, was established more than fifty years ago. The present paid-up capital is 10 million pesos, but it is now to be increased to 25 millions.

Bank of British West Africa.—Shareholders of the banks have been informed that, of the 200,000 new shares of £10 each recently created, 100,000 with £4 paid have been allotted in equal proportions to the London County Westminster and Parr's Bank, the National Provincial and Union Bank of England, and the Standard Bank of South Africa at £6 5s per share, the premium of £2 5s having been added to reserve. The arrangement has been entered into with the concurrence of Lloyds Bank, which already holds 37,500 shares. Each of the three banks will be represented on the board. The subscribed capital of the Bank of British West Africa is now £3,000,000, of which £1,200,000 is paid up, while the reserve fund amounts to £625,000

Italian Banking in Roumania.—We are informed that under the auspices of the Banca Commerciale Italiana of Milan, there has been formed in Roumania a banking institution under the name of Banca Commerciale Italiana and Rumena, which has just opened offices in Bucharest. The capital of the institution is 50,000,000 lei, and we understand that a branch is soon to be opened at Galatz. Apart from the Banca Commerciale Italiana, there are associated with this undertaking prominent Roumanian interests.

Egyptian Cotton Crop.—Our Manchester correspondent writes:—The acreage under Egyptian cotton for the season 1920-1 has been officially estimated this week at 1,827,000 feddans, against 1,568,000 feddans last year, or an increase of over 16 per cent. The monthly report on the condition of the plants just issued by the Alexandria Produce Association is very favourable, and undoubtedly the growth is making good progress. The acreage, if equal to expectations, will be a record one. In the season 1913-14 the area under cultivation was 1,723,000 feddans, and the yield turned out to be 7,684,000 cantars, so there is every probability of the output for the current season being over 7,500,000 cantars, as compared with only 5,660,000 cantars last year.

Finance and Trade in Japan.—Telegraphic advices report continued general stagnation. The Stock Exchange and Cotton Yarn Exchange are inactive, and stocks in the warehouses do not decrease. The bills cleared in July through the Tokio Clearing House totalled 2,100,000,000 yen, about half the March figure, which was the highest in the first half of this year. Short money is still abundant, and the recent issues of debenture stocks by the Oriental Exploitation Company and the South Manchuria Railway Company were successfully floated. In the silk market prices fell to 1,100 yen, owing to the increase of stocks and the report of worse conditions in America. Bank-notes in circulation, 1,202,000,000 yen; advances by the Bank of Japan, 476,000,000 yen; call money rate, 4.8 per cent.; discount rate, 10 per cent.

Bulgaria's Recovery.—Bulgaria submitted to the Entente Powers just in time to escape invasion. Recent visitors state that the country appears prosperous, and the *Times* correspondent reports in a message published on Wednesday that the harvest is more abundant than last year, and of better quality, and that much grain is stored for export, and partly sold to firms in Turkey, Italy, Czecho-Slovakia, and Austria. From various Continental papers we learn that M. Stambuliski's Government, which is supported by a solid Agrarian party, consisting of just over half the Sobranje, has carried its own extensive programme of legislation, some of it distinctly experimental in character, and bitterly opposed by the minority. Labour conscription has been established for both sexes, on lines described in these columns on May 1st; all the large estates are being taken by the State through compulsory purchase, and cut up into lots either added to existing peasant properties or assigned to the Bulgar refugees from Macedonia and Thrace. No agricultural property may now exceed 74 acres; it must be cultivated by the proprietor, unless he utilises it in some form of industry allied to agriculture, or converts it into vineyards, orchards, or artificial pasturage. A tax is to be placed on unproductive capital, which presumably is meant to check the holding of timber or mining lands for "unearned increment"; foreign capital is to be attracted by partial exemption from taxation, and education is to be compulsory between the ages of six and fourteen. The conscripted labour is to be used chiefly on public lands and in making railways and roads. Its efficiency may be doubted, but at any rate it will involve a certain amount of technical instruction; and the new Land Act should greatly increase production and stabilise the State. It is fair to add that the labour conscription has been criticised adversely as likely to interfere with the

London Correspondents: London Joint City and Midland Bank Limited.

regular supply of labour, that the Ministry is said to have had regard solely to the interests of the peasants—who are, after all, the immense majority of the people; that some of its new legislation is said to break with economic traditions; that there have been some scandals; that the currency is greatly depreciated; and that 48 of the 215 members of the Sobranje are "Communist." But Communism has not much chance in a peasant State, and Bolshevism has been severely repressed by the Government. Bulgaria has to bear the new burdens of a relatively large war indemnity and of a share of the Turkish debt. But her undeveloped resources are considerable, and her Ministry seems to mean to develop them. The results of its experiments in legislation will be watched with interest in Western Europe.

Currency Export Regulation.—The Department of Overseas Trade informs us, on the authority of the Commercial Secretary to H.M. Legation at Belgrade, that the Belgrade Journal *Tribuna,* of July 22nd, announces the prohibition of the export of German, Czecho-Slovakian and Roumanian currency by the Serb Croat Slovene State :—

"The Minister of Finance has forbidden the export of German marks, Czecho-Slovakian crowns, and Roumanian lei. By reason of this prohibition, anyone found exporting more than a value equivalent to 2,000 dinars in these currencies will be dealt with as a smuggler; the money will be confiscated, and the delinquent imprisoned. The attention of the Customs authorities has been specially directed to this regulation."

Furness, Withy, and Co.—A substantial increase in profits is shown in the report of Furness, Withy, and Co. for the year ended April 30th last, but no information is given in the report as to the year's trading. The table below summarises results for a number of years :—

	Total Profit.	Depreciation.	Reserve, &c.	Dividends.	Ord. Rate.
	£	£	£	£	%
1907-8	327,825	114,742	..	153,851	5
1908-9	267,075	114,897	..	166,361	5
1909-10	332,992	145,417	..	163,302	5
1910-11	440,732	179,603	50,000	220,620	7½
1911-12	653,207	240,000	125,000	270,620	10
1912-13	756,141	350,000	125,000	270,620	10
1913-14	620,928	350,000	..	270,620	10
1914-15	653,548	350,000	15,000	268,431	10
1915-16	1,386,960	350,000	300,000	463,125	20
1916-17	*787,564	350,000	200,000	456,250	20
1917-18	645,077	200,000	..	456,250	20
1918-19	747,661	..	300,000	452,500	20
1919-20	1,004,821	500,000	..	452,500	10

* After payment of two years' Excess Profits Duty.

Profits are given after making provision for taxation, and show an increase of £257,000, but are still well below the record total for 1915-16. This year £500,000 goes to depreciation as against an appropriation of £300,000 a year ago to trades contingencies fund. The ordinary capital was raised during the year from £2 millions to £4 millions, and the distribution is therefore at the rate of 10 per cent., free of tax, as against 20 per cent., free of tax, last year. The balance carried forward is increased from £120,583 to £172,904. Changes in the balance-sheet, which is of the tabloid type, include increases of £1,707,200 in creditors, of £2,803,900 in the property item, which includes investments, and of £539,000 in debtors. Cash and Treasury bills are £466,600 higher at £3,522,700.

Bass, Ratcliff, and Gretton.—Unlike Arthur Guinness Son, and Co., whose annual report was briefly examined in last week's *Economist,* Bass, Ratcliff, and Gretton do not show much expansion in profits. The report for the year ended June 30th last shows a gross trading profit of £1,113,100, as compared with £890,300 a year ago and £749,600 for 1913-14. Expenses rose from £568,200 to £817,500, but sundry revenue brought in over £50,000 more than last year, and the amount available for appropriation is £22,200 higher at £638,600. The table below compares results for the past four years and for 1913-14 :—

Year ended June 30.	1914.	1917.	1918.	1919.	1920.
	£	£	£	£	£
Gross trading profit	749,607	773,123	771,896	890,294	1,113,121
Expenses	455,611	465,457	463,416	568,151	817,546
	293,996	307,666	308,480	322,143	295,575
Sundry revenue.....	143,153	165,139	207,086	232,693	282,965
Balance forward	64,593	56,933	68,120	61,570	60,080
	501,742	529,738	583,686	616,406	638,620
Deb. interest	80,800	80,800	80,800	80,800	80,800
Bad debts and invest. deprec.	34,266	47,418	65,766	24,646	43,450
Pref. dividend	68,000	68,000	68,000	68,000	68,000
Ord. dividend	204,000	190,400	204,000	217,600	224,400
Rate.....	15 %	14 %	15 %	16 %	11 %
Reserve	50,000	75,000	103,550	165,280	160,000
Carried forward....	64,676	68,120	61,570	60,080	61,970

Owing to the capitalisation of reserves and the distribution of bonus shares, the ordinary capital has been increased by £680,000. The ordinary dividend has been reduced from 16 to 11 per cent., free of income-tax, but it will be seen that the distribution requires a slightly larger amount. Otherwise the appropriations are on much the same lines as last year, £100,000 going to reserve and £60,000 to reserve for income-tax. The balance-sheet shows an increase of £1,008,900 in credi-

tors and of £977,300 in debtors. Investments are £623,000 lower, but stocks have gone up by £632,700, and the property item at £1,287,500 shows an increase of £248,800. Goodwill and trade-marks are still valued at £800,000.

A World's Market in Paris.—The Federation of British Industries has undertaken the direct representation for Great Britain and the Dominions of the Paris "Marche du Mond." The idea of the promoters is to systematise and centralise international commerce by erecting in Paris—which geographically and historically is the focus of Europe—a great commercial centre, in which the manufactures of all nations can be permanently exhibited under one roof, and therefore readily accessible to buyers from all countries visiting Paris. In effect, it is a development of the City Trade Fair for which France is famous. But whereas the City Fair is temporary and local, the "Marche du Monde" will be permanent and international.

Norwegian Industries Fair.—A fair will be held at Christiania during the week September 5th-12th representative of Norwegian industries, and organised under the auspices of the Government. Inquiries may be addressed to the Norwegian Chamber of Commerce, 46 Kingsway, W.C. 2, and the Norway Travel Bureau, 179 Strand, will give information about steamship routes and railways.

Transvaal Output in July.—The July statistics of gold output in the Transvaal show that the total production of fine gold during the month amounted to 736,099 ounces, as compared with 715,957 ounces in June and 725,497 ounces in July, 1919. The following table shows the production for a number of years past:—

	1916.	1917.	1918.	1919.	1920.
	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.

FRANCE.—BUDGET PASSED—NEW LOAN—NOTE ISSUE—CROP PROSPECTS—REVENUE—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, August 10.

THE Budget Bill has at last been passed by both Chambers, but only as the result of heroic measures adopted on the last day of the session, when both the Chamber and the Senate sat from nine a.m. on the Saturday until close on four a.m. on Sunday in order to dispose of the Bill before the end of the session. The main reason for this excessive energy was that Parliament desired to avoid the necessity of taking another vote on account, which would have been imperative in order to provide for the financial needs of the Government had the Budget Bill not been passed before August had been entered upon. During the day the Bill passed backwards and forwards more than once between the Chamber and the Senate, and on each occasion each House showed a keen desire to expedite business by substantially modifying details on which it had previously apparently come to final decisions. It was not until 3.35 a.m., however, that the Chamber was able to rise for the recess, and the Senate followed suit five minutes later.

The great feature of the closing sitting of the Chamber was the introduction of a Bill by the Finance Minister, M. François-Marsal, to authorise the issue in October of a new National Loan—which, incidentally, was baptised by one of the deputies during the brief debate that took place with the name of "the National Consolidation Loan." The new issue will take the form of Perpetual Rentes, carrying interest at the rate of 6 per cent., and the scrip will not be redeemable before 1931. Like the previous issues, it will be free from taxation of any kind, both present and future. Details as to the price of issue, &c., will be announced later, in the form of a Presidential decree, but it is generally understood that the new Rentes will be issued at, or in any case very nearly, par, as otherwise it would, of course, prove fatally detrimental to the recent 4 per cent. issue (which was issued at 70f 80c, and at that price yields about 5.65 per cent.), and the last issue of all, which was issued as a 5 per cent. loan at par, redeemable by drawings at 150. The terms of the new issue, so far as they are yet known from the Bill itself, have received general approval both from the ordinary and the banking public. The Bill authorising the new Loan was introduced almost unexpectedly during the last few hours of the session, and was passed through both Houses the same day, after the briefest possible discussion.

Another surprise sprung on Parliament by the Finance Minister was his request for sanction for a measure authorising the raising of the maximum of the note issue of the Bank of France from 40,000,000,000f, which was the maximum fixed by the law of July 17, 1919, to 43,000,000,000f. The object of this substantial increase on the maximum amount appears to be to enable the Government to secure sufficient further advances of ready-money from the Bank to enable it to tide over the interval before the new taxes begin to come in in appreciable volume. Both in the Chamber and the Senate considerable astonishment was expressed at the proposal, but the assurances of the Finance Minister as to the necessity for the measure were such that neither House showed any serious hesitation in sanctioning the proposal. As the Banque de France weekly statements show, the note issue at present amounts to slightly over 37 milliards, so that it is still well below the limit of 40 milliards authorised last year. In virtue of the law of July, 1919, the advances which the Banque de France is compelled to make to the State are fixed at 27 milliards, and on July 20th last they amounted to 25½ milliards, so that, quite apart from the new law passed a day or two ago, the Treasury was still in a position to obtain advances of 1½ milliards in respect of the 2½ milliards of notes which the Bank had authority to issue in addition to those already in existence. Any further advances in this respect, however, would involve, as the *Temps* points out, either a suspension of commercial operations by the Bank, or a further inroad on the Bank's reserve of bullion. As this amounted on July 20th last to 5,836,810,550f (247,436,579f in silver and the balance in gold), it is easy to realise that some hesitation was felt in taking such a step, and that wisdom suggested that the situation should be met by special precautions, designed to meet, at one and the same time, the double peril of an extraordinary scarcity of money on the part of the Treasury, on the one hand, and serious difficulties in the carrying on of business by the Bank on the other. The raising of the maximum note issue and its possible consequences have not escaped criticism in certain quarters, where attention is called to the fact that, whereas the authorised advance by the Bank of France to the State amounted only to 2,900 millions in 1914, they have now

reached 27,000 millions, but on the whole it seems to be recognised that the measure is justified by existing circumstances.

The Finance Minister was in distinctly optimistic mood when introducing his two new Bills. He insisted that the recent marked improvement in the value of the franc was due to the healthier economic and financial situation of the country, owing to the excellent taxation returns, to the effort the country is now making to pay off its debts, and to the improvement in the foreign trade of the country. Imports of foodstuffs, he pointed out, have diminished, while exports have increased 72 per cent. in value and 99 per cent. in quantity as compared with last year. The increase in the revenue received, he said, had amounted to 1,634 million francs since the beginning of the year. "The French taxpayer," said the Minister, amid applause, "has been represented as not paying his taxes, whereas, as a matter of fact, he has actually paid more than he has been asked for." In addition to the great fiscal effort the country was making, the Minister added, "in every factory and in all branches of industry the people are filled with the determination to work," and already during the past 12 months France had increased her national wealth by three milliard francs, while the returns from taxation, and especially from war taxes, were most encouraging.

The Ministry of Agriculture has seldom been able to publish such strikingly optimistic figures in forecast of the season's crops as those that have just been issued showing the comparison between July of this year and July of last year. The returns from all over France show that, as had been anticipated, a wonderful harvest can be expected. The intermittent rains that have fallen within the last few weeks have caused some considerable uneasiness, as oats, wheat, and barley have already largely been cut. It is confidently anticipated, however, that the damage done will not be sufficiently great to interfere with the favourable effect that the crops are expected to have on the exchange problem.

The official returns of the yield of taxation during the month of July have been issued to-day, and show that the total revenue for the month amounted to 1,109,011,100f, or 338,824,000f more than the Budget estimates, and 337,915,100f more than the revenue for July, 1920. In view of the fact that a large number of new taxes came into operation on July 1st, however, it is impossible to make any real comparison between the figures for the past month and those of July, 1919. The revenue for the first seven months of 1920 shows an increase of 1,973,493,200f over the Budget estimates for the period, and amounted to 2,253,760,900f more than the corresponding period of last year.

The Polish situation has been one of the most notable factors on the Bourse during the week, and it is probable that the effects of it would have been greater if the holidays were not in full swing. There is undoubtedly a feeling of uneasiness here that Bolshevism may gain ground, and consequently there has been a tendency to realise in speculative stocks, particularly Russian and Balkan descriptions. During the week the foreign exchanges have been somewhat stronger, the pound sterling closing at a trifle above 50. French Funds have been somewhat heavier, the Three per Cents., after paying dividend, dropping from 58.50 to 57.45. Banks were rather stronger, Banque de France advancing from 5,500 to 5,625, and Banque de Paris from 1,614 to 1,678. Railways have remained stable, but shipping has shown depression, Messageries dropping from 452 to 420, Transatlantiques from 456 to 446, and Chargeurs Réunis from 1,360 to 1,330. Suez Canal, for the first seven months of 1920, has shown receipts amounting to 83,470,000f, as against 72,420,000f for the corresponding period of last year. Metallurgical shares have, on the whole, reacted to the feeling of pessimism, St Nazaire dropping from 1,945 to 1,860, and Gnome from 1,730 to 1,685. Petrols are down, Baku standing at 3,600 and Mexican Eagle having fallen from 559 to 535. Royal Dutch, however, have advanced to 29,750 from 28,800, while Shells have fluctuated between 375 and 355, having started the week at 348. Omnium has dropped from 2,100 to 1,900.

The returns of the Bank of France for last week, the previous week, and the corresponding week of 1913 are as follows :—

GERMANY.—FEDERAL BUDGET—EXCHANGE AND BOURSE—NEW IRON PRICES—TRADE REGULATION—CAPITAL MARKET.

(FROM OUR CORRESPONDENT.)

BERLIN, August 5.

THE Minister of Finance, Dr Wirth, this week submitted a memorandum with main details of the Budget of 1920. The memorandum shows how the unceasing currency inflation upsets estimates of expenditure almost as soon as they are framed. A revolution in values has taken place. A year ago it was officially estimated that the normal annual expenditure would be 17½ milliard marks; to-day, without counting the big deficits on railways, posts, &c. (which together almost equal last year's estimate of the whole national expenditure), 25 milliards are needed. The provisional estimates for 1920 show expenditure of 27,770,000,000 marks, of which 12,377,000,000 marks will be swallowed up by service of Debt, 3,880,000,000 by pensions, 3,238,000,000 by the general administration, and 3,000,000,000 by the Food Ministry. Direct taxes will yield, as follows, about 6½ milliards :—

	Million Marks.
Emergency levy	2,250
Income-tax	2,100
Interest and dividend tax	1,300
Company tax	300
Succession duties	496
Property duty	100

In addition the State will receive 3 milliard marks from the non-recurring increment of property tax, which is to be replaced by a triennial tax. Taxes on consumption, duties, monopolies, and coal tax will yield together 9,087 million marks. Of this sum, stamp duties and traffic taxes will bring 1,030 million marks; the sales tax, after paying 15 per cent. to the States and municipalities, 3,102 million marks; Customs, 2.5 milliard marks; tobacco, 1 milliard marks; wine, 250 million marks; brandy, 800 million marks; and beer, 100 million marks. The coal tax (4 to 4½ milliards) will yield the rest. The total revenue from the sources mentioned is put at 22,980,000,000m. Export duties and receipts from banking will yield 1,950

million marks. And 2,922 million marks will be raised by new taxes not yet passed. The total revenue, projected taxes included, is 27,770,000,000m, which balances with the ordinary expenditure. But the loss on the railways, now detached from the ordinary Budget, will, calculated on the last six months' experience, be 15.6 milliard marks; and the loss on posts and telegraphs about 1 milliard. With other claims, and allowing for the further growth of expenditure on railways and posts caused by currency conditions, the total extraordinary expenditure will be between 24.5 and 27.6 milliards. The ordinary and extraordinary expenditure together will be from 52.3 to 55.3 milliards. The ordinary revenue (which is all there is) will about cover half.

A report for the financial year 1919 shows that out of 13,541,600,000m estimated as receivable from duties, taxes, and stamps only 7,876,793,495m was received. Many items, owing to inflation, largely exceeded the estimates; but of 9,500,000,000m counted on from new taxes nothing at all came in, the main reason being that Herr Erzberger's new taxation machine is not yet ready. The coal tax yielded 1,354,000,000m, which is nearly double the estimated sum. The Budget memorandum shows that expenditure in 1919 totalled 74,405,500,000m, as against 52,015,400,000m in 1917, the last full year of war.

During the past week the Bourse was, on the whole, firm. On July 31st the sum of quotations of five interest-bearing loans and 15 leading dividend payers was 8,359m, as against 8,239m on July 24th. The first distinct upward tendency was yesterday, when the foreign exchanges suddenly rose, London selling rate from 161.30 to 167.55 and New York from 43.70 to 46.57½. This is the second time in a fortnight that the mark has fallen heavily on a single day. To-day the mark recovered somewhat; but the pound is still 30 marks over its minimum in May and the dollar 11 marks. At times during the week Bolshevik successes slightly depressed Bourse prices; and to this cause is also ascribed the fall in the mark, although, according to the rule of all this year, stocks should rise when the mark falls. The heavy cut in iron and steel prices decided for August (and probably until October) by the "Eisenwirtschaftsbund" affected some metal stocks. The prices of pig-iron and of the half-finished and heavy-finished products of the former Steel Syndicate (which the Bund replaces) were last reduced at the end of May for the months July and August. The comparative prices are :—

	Marks per Ton of 1,000 Kilos.		
Pig-iron.	New Prices. June-July.	May (Max.)	1914.
Hæmatite	1,910	2,150½	2,350½	79
Foundry iron I.	1,660	1,740½	1,790½	75½
Foundry iron III.	1,659	1,739½	1,789½	70½
Siegerland steel-iron	1,610	1,626	1,626	69½
"Spiegeleisen"	1,610	1,626	1,708	75
New and former prices of the other products are :—				
Ingots	2,140	2,435	2,650	..
Blooms	2,260	2,655	2,900	..
Structural forms	2,740	3,320	3,620	..
Bar-iron	2,840	3,200	3,650	..
Wire rods	3,160	3,385	4,150	..
Plates (heavy)	3,595	4,040	4,700	..

Heavy rails have been cut from 3,320 to 2,950 marks per ton, tram rails from 3,700 to 3,353, and mine rails from 3,300 to 2,900. Export prices have also been reduced. For bar-iron the new prices (always invoiced in foreign currency) to Holland are 275 gulden instead of 300; to Switzerland 560f, instead of 650; to Denmark 600 crowns, instead of 650; to Norway 590 crowns, instead of 625; and to Sweden 450 crowns, instead of 500. Converted into marks at current exchange these prices are about 40 per cent. more than home prices, and owing to the mark exchange fall since May, when the highest prices prevailed, the German exporter gets about 600 marks more a ton than he did then. The Federal Coal Syndicate has cut brown coal prices by 9 marks a ton; but the Government has refused the Syndicate's demand to raise hard coal prices 25 marks a ton, and later refused a modified demand for 9 marks. It promised instead an arrangement which, while not putting a fresh burden on the consumer, will meet the needs of the mine-owners—in other words, one more subsidy. When some months back 7½ marks a shift was conceded to miners the Government, in the form of free food bonus, took 4½ marks of the 7½ on its own shoulders. As taxes are not coming in (owing to working-class opposition, the law requiring employers to deduct directly 10 per cent. from wages for income-tax has had to be modified), it cannot even be said that these endless subsidies fall on the taxpayer. They fall on all citizens according to no reasoned incidence by the oblique burden of currency inflation.

The question of State trading, requisitioning, rationing, and maximum-pricing has again been before a Government conference, and it has been decided that the meat control shall be abolished in the autumn. The sugar control will continue; also control of breadstuffs, milk, and home-produced cheese. The rest of the much-criticised "Zwangswirtschaft" will disappear. Export duties, also an offshoot of the system, have again been cut down this week, the duties on women's clothing and millinery being now 1 per cent. and of men's clothing 5 per cent. The Hanse League, a powerful association of business men founded a few years before the war by Privy Councillor Riesser, with the aim of fighting agrarian domination and bureaucratic meddling, has assailed the Foreign Trade Regulation Boards, which were reformed lately on representative principles. The Boards are accused of being as slow and inelastic as they were during the war, when they were in bureaucratic hands.

Industrial conditions continue to be bad; but the mark's new drop has encouraged manufacturers to hope for a return of the course of last winter, when, with a falling mark, prices rose rapidly, frightening citizens into buying, and keeping mills as busy as shortage of coal and material allowed. A bankers' estimate of industrial capital raised in July shows a decline in new foundations and increases of capital :—

(Million Marks.)

	New			
	Ord. Stock.	Preferred.	Debentures.	Total.
Fourth quarter, 1919	1,157	353	388	1,898
First „ 1920	1,863	179	352	2,394
Second „ „	2,260	149	359	2,768
July, 1920	359	7	240	608
Totals	5,639	688	1,339	7,668

The big decline in preferred stock issues is due to threat of restrictive action by the Ministry of Trade. During the winter preferred stock was issued with double, triple, or quadruple vote, with the ostensible aim of keeping the stock in German hands, and so foiling foreign attempts to control native industry. Such stock was issued by companies in no way threatened by foreign investors, and this enabled a handful of persons to gain influence disproportionate to their monetary stake. The Ministry has circularised Chambers of Commerce, asking what form the restrictive legislation ought to take.

POLAND.—THE ARMISTICE—THE FINANCIAL SITUATION—WAR AND PEACE—THE STOCK EXCHANGE—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

WARSAW, July 22.

THE armistice, which at the moment of writing seems to be a question agreed upon by the belligerent parties, is closing a period in the recent history of the young Polish Republic characterised by a most rapid transition from the heights of military glory to a most precarious political position. If we look back at the last few months, we must wonder how little the Polish Government, in framing its foreign policy, took into consideration the economic exhaustion of the country. To every sober-minded observer it was quite clear, that the financial situation of the country was not such as to enable it to support the strain of a great war financed more or less exclusively by the use of the printing press.

According to the last report of the Polish National Bank, the amount of notes in circulation on July 10th amounted to 23.5 milliards. The maximum imposed by the Diet on March 20th has been already passed, and it has become necessary to increase the limit by 10 milliards.

It is not difficult to foresee that in the long run such a financial policy would have brought Poland to the verge

of ruin. It may be hoped that a peace concluded in a short time will enable the country to put its finances on a solid basis and to take advantage of its economic resources.

Political passion is at its height. This may be partly attributed to the fact that the military successes in the Ukraine had roused the greatest political hopes. The dream of a powerful Poland united by federation with the Eastern border States seemed realised, and in consequence the actual disappointment is great. All parties are agreed upon one point: that it would be better to continue the war than to accept a peace which should be considered as incompatible with Polish honour. Even the Socialist organs, which were advocating always the necessity of a peaceful settlement between Russia and Poland, are calling volunteers to arms. Active military preparations are made for the defence of the country.

The political situation had a very depressing influence on the Stock Exchange. For ten days only foreign exchanges and some gilt-edged securities were quoted, while there were no dealings in shares. It is interesting to note that the English pound, though it rose from 550 at the beginning of the month to 700 in the most critical moment, never reached its highest level of 820 in the beginning of June, when great payments for imported cotton and other raw materials were necessary.

For the first time statistics of Poland's foreign trade have been published. From November to the end of January 156,571 tons were imported, while the export amounted only to 8,136 tons. Among the articles exported the most important were:—Cement (2,973 tons), food products (1,520 tons), fuel (180 tons), timber (1,079 tons), iron (945 tons), petroleum, crude and refined (505 tons), machines (92 tons), &c.

Very interesting are the data showing the origin and the destination of the imported and exported goods. The most important Polish market is Germany. Of the 8,136 tons exported, 3,457 were sent to Germany, 2,321 to Austria, and only 1,400 to England, 300 to Switzerland, and 100 to Holland.

Among the countries from which Poland imported goods, Germany also occupies the first place. Of the 156,571 tons imported, 90,778 came from Germany, 19,080 from Czecho-Slovakia, 17,035 from Austria, 9,699 from Holland, 6,229 from England, 6,227 from the United States, 3,061 from Switzerland, 1,661 from France, and 768 from Italy.

Though since the armistice every effort has been made to enter into trade relations with the Allies, Germany ranks first among the countries of origin and of destination. This proves that geographic and economic conditions have a deeper influence on trade relations than political sympathies.

FINLAND.—TRADE—STATE REGULATION—EXCHANGE—FINANCES—BANKS—COMMERCIAL ENTERPRISES.

(FROM OUR CORRESPONDENT.)

BERLIN, August 7.

FINLAND'S foreign trade continues to improve. After the heavy adverse balance of 1919 a higher ratio of exports to imports was urgently needed. In 1919 Finland imported goods worth 2,505,400,000 Finnmarks; and exported only 843,200,000 Fm. In the worst month of 1919, March, she imported 122,700,000 Fm, and exported only 6,000,000 Fm. Her import excess for the whole year was 1,662,200,000 Fm. In May and June this year exports nearly balanced imports; but there is a large import excess on the six months as a whole:—

(Millions of Fm.)

1920.	Imports.	Exports.	Import Excess.
January	254.4	43.3	211.1
February	253.8	97.7	156.1
March	213.0	59.7	153,3
April	273.6	97.8	175.9
May	205.0	197.5	7.5
June	292.9	290.7	2.2
Totals	1,492.7	786.7	706.1

The causes of the improvement are increased export of and rising prices of wood, wood-pulp, and paper. The import decline in May was due to smaller foreign purchases of flour and raw textiles. There was an increase in exports of wood and wood products from 12.8 million Fm in April to 93.3 million Fm in May; and of paper and paper products from 72.6 millions to 90.2 million Fm. The provisional June report shows that 163,500,000 Fm of wood was exported, though the whole wood export for January-June inclusive was only 286,000,000 Fm; and that 113,900,000 Fm of pulp, paper and cardboard were exported, against 410,400,000 Fm for January-June, inclusive. The recovery in wood exports, last year retarded by tonnage shortage, is important, as wood exports formerly played a great rôle, reaching a maximum of 44,604,000 Fm in 1917, and falling to 964,000 Fm in 1919. The export of butter to England has been resumed. The crops, reports the Helsingfors *Hufvudstadsblad*, suffered from drought in early July, but have been much improved by rain, and are on the whole satisfactory. A good harvest would materially diminish the need for importing American corn, and so improve the trade balance.

In June and July, Helsingfors held its first Commercial Fair, based upon the Leipzig model. Goods worth 125,000,000 Fm were sold, and the administration more than covered expenses. A company with a capital of 5 million Fm has been formed to hold similar Fairs every year. The publication of a trade journal in English has been arranged for. State regulation of trade is being severely attacked. A Government Commission of Inquiry into State trading in 1917-19 reported unfavourably on official methods. At first the State suffered heavy losses, and bad food was bought; and when in 1919 a large profit (81 million Fm) was reaped, that was achieved only by charging the public unreasonably high prices. The export duties have been sharply opposed. In May, the Minister of Trade, Dr Ehrnrooth, announced that they would be maintained in so far as was necessary to yield 170,000,000 Fm, the estimated Budget deficit. Further direct taxation, he declared, could not safely be imposed. A May law fixed export duties on all goods on the export-restriction list at 2 per cent. *ad valorem*, with 15 per cent. on ships sold to foreigners and special dues, assessed on bulk, on timber, &c. The State Department of Forests protested that the duties would foil the State's own design to exploit the forests by granting of concessions. Last month the Cabinet transferred unsawn wood, pit props, bark and sawdust; also some metal articles, engines, motors and pig-iron, all formerly subject to restriction, to the free-export list. In March, import duties were, with some exceptions, raised 200 per cent. above the rates fixed in the Customs Law of March 26, 1919. A further increase of the import duties is proposed.

The Finnmark's foreign exchange has fallen about a third from its highest level of the year; but it is considerably higher than its lowest point of October last. The Bank of Finland's quotations for 100 crowns on Stockholm (the chief foreign market) have been:—1919, January 2nd, 262; 1920, January 2nd, 708; March 20th, 370; August 1st, 581. Sterling, which sold on March 20th at 67.60, sold on August 1st at 103.20. In the free market, foreign exchange cannot be had at official rates; on July 30th, when the official rate was 103.20, the free market rate was 129. The State regulation of exchange continues to be attacked. In particular is criticised a prohibition of last spring against import of Bank of Finland notes, on the ground that notes were being unlawfully smuggled out. The prohibition's result is that Finnish notes sell abroad much lower than bills: *e.g.*, the Berlin selling rate for bills (100 Fm) on August 4th was 154.80; for notes only 134.50. The trade journal *Mercator* reports plans to establish an Exchange Bourse. On the basis of comparative price-levels, the Stockholm *Handelsblad* calculates that the internal value of the Finnmark on March 22nd, when it sold at 26 öre, was 24 öre. The present Stockholm price is around 16½ öre. In April the depreciation of the Finnmark exchange almost exactly corresponded to the currency inflation. As the Finnish note circulation has not since in-

creased, and as exports have increased, the probable cause of the exchange decline is speculation (the Fm is a favourite speculation object in Scandinavia) based on considerations of international politics. The most marked declines were at the sharpest point of the Alands controversy, and after the Soviet's victories in Poland. Threats to Soviet power (*e.g.*, the Judenitsch attempt) have always sent the Finnish exchange up.

Finland has satisfactory State finances, in that it is the only one of the newly independent countries that does not increase its floating debt, and print banknotes in order to pay its way. The note circulation has all this year oscillated at a point somewhat above the minimum of 1919 (August 23rd, 958,800,000 Fm). The Bank of Finland's report for May 8th showed a circulation of 1,240,000,000 Fm; the last report, for July 29th, shows 1,183,600,000 Fm. The closing of State books for the financial year 1919 showed expenditure of 18,000,000 Fm in excess of estimates. The Budget for the current financial year, as amended by the Riksdag in April, is :—

	Fm.
Expenditure—	
Ordinary	1,350,732,934
Extraordinary	580,044,000
Total	1,930,776,934
Revenue—	
Ordinary	1,545,544,650
Extraordinary	207,050,000
Total	1,752,594,650

The Budget Commission recommended postponement of certain non-urgent expenditure until sufficient revenue came in. The Customs report for January-June, 1920, shows receipts of 140.5 million Fm, as against 78.5 million Fm in the same period of 1919. Of this, import duties yielded 129.5 million Fm, and export duties 11.5 million Fm. Helsingfors newspapers report the conclusion of a short-term loan of $4,992,649 with the United States Grain Corporation, $700,000 of which has already been received as a food credit. Of the balance, the Bank of Finland gets 2½ million dollars, which it puts at the disposition of the State. The interest rate is 5 per cent.

On March 22nd the Bank of Finland raised its discount rate from 7 to 8 per cent. The private banks' reports for the first half of 1919 indicate increasing monetary stringency. During the first five months there was a continuous increase of lending, while deposits tended to remain at the same level, until June, when they sharply increased, leaving, however, the net claims on the public well above the figure of January. Totals (in million Fm) for all the chief banks are :—

1920.	Deposits.	Loans.	Excess of Loans.
31/1	3,471.4	4,524.2	1,052.7
29/2	3,402.2	4,576.2	1,174.0
31/3	3,391.8	4,660.1	1,268.2
30/4	3,417.4	4,739.0	1,321.6
31/5	3,423.8	4,827.5	1,403.7
30/6	3,500.4	4,899.5	1,399.1

The private banks' foreign liabilities at the close of the half-year were 612.2 million Fm, while their foreign credits were 103.1, showing net debt of 509.1 million Fm, as against 450.33 million Fm on December 31, 1919. The increase is small in comparison with the increase in 1919, which year started with a net debt of only 98 million Fm. The bank reports for 1919 show largely increased profits. The Kansallis Osake (People's) Bank gained 14,600,000 Fm, as against 6,000,000 Fm in 1918; the Suomen Kauppa (Finland's Commercial) Bank, 2,100,000 Fm, against 1,460,000 Fm; and the Länsen-Suomi (West Finnish) Bank, 2,840,000 Fm, against 910,000 Fm. Bank dividends for 1919 are as high as 17 per cent. The Stock Exchange has, on the whole, been dull.

Great enterprise is being shown in railways, ports, shipping, and industries. About 200 kil. of railway are being built. The Government lately obtained a credit for doubling the single-tracked part of the railway east to Viborg, the aim being to have a double-tracked line for the expected transit trade to Petrograd. The Free Port Company, of Hangö (south-west Finland, former port for butter export to England), has published its plans for construction of a free harbour, with docks, wharves, warehouses, oil cisterns, and workmen's dwellings. The Government has been asked to advance 16,800,000 Fm. The work will take three years.

SWEDEN.—THE MONEY STRAIN—GOOD EXPORT FIGURES—COAL AND OIL.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, August 6.

FOR the past fortnight the strain in the money market has been still more accentuated, with heavy sales on the Stock Exchange at consequently declining rates. Whether the last-named feature has anything directly to do with the lack of ready money is difficult to say, but, in all likelihood, many holders have at the turn of the half-year been forced to sell for want of ready cash, and this caused a great number of speculators to follow suit in the hope of profiting by a margin downwards. A clear contrast to the unsatisfactory monetary conditions are the excellent export figures, which seem to contradict the talk about dullness in trade. Thus timber and wood pulp showed good figures for June, and a substantial increase in shipments of iron ores, iron, steel, and machinery was also noticeable. In regard to fuel supply, industry has still to live from hand to mouth, as the imports of fuel are insufficient to leave a stocking surplus. The hopes placed on America as a saviour of Sweden in the coal famine have never been realised; 254,000 tons passed into the country during June, and of these 170,000 tons came from Great Britain and 84,000 tons from U.S.A. It is pretty clear that, owing to the strongly increased use of oil motors, both on land and at sea, the demand for mineral oils is becoming stronger every day, and this notwithstanding the fact that the extensive use of electricity is reducing the consumption of petroleum quite considerably. During the first six months this year Sweden has imported 78,000 tons, as against 57,000 tons of mineral oils during the corresponding period last year. The royal committee appointed to inquire into the socialisation problem has now started its work, and its composition of prominent industrial and commercial men, together with leading politicians, is a safe guarantee of no unpractical reforms being adopted. Foreign exchanges have moved downwards, except dollars, which have reached 4.92. The position of reichsmark is very weak, and is undoubtedly reflected in the unsatisfactory export conditions in Germany. The summer, which is now nearly at an end in Sweden, has been mostly wet, but, notwithstanding this fact, the hay harvest is a record one. Whether other crops will show the same result depends on the weather during the harvest time, as the growth is quite brilliant.

NORWAY.—STOCKS—STRIKES—TRADE—EXCHANGES CROPS.

(FROM OUR CORRESPONDENT.)

CHRISTIANIA, August 7.

As everywhere else at this time of the year, the Stock Exchange is dull, but several circumstances have combined to make it more than ordinarily dull. On July 26th it actually happened that not a single deal was arranged at the Christiania Stock Exchange—an occurrence hardly on record in the history of the Exchange. The main factors producing this effect are, firstly, the general depression, especially in shipping. Then the scarce and dear money renders it unremunerative to speculate in shares with borrowed money, even if money could be had for that purpose, which is very difficult. And last, but not least, the labour unrest causing so much uncertainty to every branch of commerce. The mania for striking which seems to have beset all the world is doing its baneful work also in this country. At present the main question is the railwaymen's partly inaugurated and partly threatened strike, which, if realised, certainly would be disastrous. Negotiations between the parties are, however, carried on, and will, it is hoped, result in a bearable solution. Meanwhile, the general public are organising themselves to step in to keep the machinery of national life going in case the railway people and other workmen in the most vital industries should go out on strike.

The general state of trade is not as good as might be desired. Fortunately, the foremost articles of export—viz., products of forestry, such as timber, sawn goods,

cellulose, wood-pulp, paper, &c.—are enjoying much prosperity, and help to keep up the trade-balance, which is very adversely affected by the excessive imports and by the payment on British and American ship contracts.

The financial position on the whole, no doubt, is sound. There are, certainly, persons who have been speculating too much, especially in shipping stocks, and who are therefore now experiencing hard times; and some provincial banks who had backed them up now are hard pressed; but there is no doubt that all the principal banks are very strong, and able to meet any legitimate want of money. Money is dear, however, the official Bank rate being 7 per cent., and open credit account 8 per cent., and in consequence very few fresh ventures are started, and speculation is kept down.

Recently the board of the Bank of Norway issued a very earnest summons to the Norwegian people, enjoining frugality, industry and thrift as the only remedy for the financial difficulties which will be sure to arise in this country in proportion to a similar state of things in the economical life of the nations at large. Whether the timely words will bear any fruits remains to be seen; curtailing of output and excessive consumption certainly are rampant. The exchange question is getting more and more troublesome. Swedish krones at 133.50 and sterling at 23.57 is serious enough, but dollars are perfectly appalling, the record being noted yesterday at 6.60; this is not very far from 200 per cent. of the normal rate of 3.70. The crops so far are very promising. The haymaking in some quarters is nearly over, but in the greater part of the country it is in full swing, and is very abundant. Heavy and continuous rains are now, however, threatening to spoil it.

GREECE.—GERMAN INDEMNITY—SHIPPING LOSSES—NEW LOAN AND GREEK DEBT—FOREIGN CAPITAL IN PUBLIC WORKS—HOUSE FAMINE.

(FROM OUR CORRESPONDENT.)

ATHENS, August 3.

ACCORDING to news published in the papers, the Allied Conference at Spa has definitely allotted to Greece 4 per cent. of the German indemnity and 17 per cent. from the indemnity payable by Austria, Bulgaria, and Turkey. The amount thus to be collected from Germany is estimated at 500 million gold francs, which sum the Greek Delegation considered as very small, and has taken steps to secure a fairer portion, in view of the heavy sacrifices of Greece. Moreover, the indemnity to be obtained for the losses of the Greek marine during the war has not yet been fixed. In fact, Greece should have been allotted a substantial part of the German ships, which the Allies have distributed among themselves, with the exclusion of Greece, and not receive payment in money or bonds, which is not satisfactory, considering the need of ships, the difficulties and the high cost of building new ships abroad, since Greece has not its own shipyards. To get an idea of the heavy Greek losses—not to speak of the innumerable services rendered to the Allies by the Greek steamers, nearly all of which were in the service of the Allied Governments—the following figures alone will suffice :—Out of a gross tonnage of steamers, on June, 1914, of 820,860 tons, there have been sunk by the enemy steamers a total gross tonnage of 387,943 tons; on the other hand, the losses from common sea risks amount to 51,750 tons, gross tonnage. Consequently more than 50 per cent. of the Greek tonnage in steamers has been sunk.

In April last the Government issued a lottery loan of 300,000,000 drachmas, 5 per cent., which constitutes a first-class investment. The price of issue was 195 drachmas, and each bond, of a nominal amount of 200 drachmas, is payable, when drawn, for 300 drachmas. Besides this profit and the exemption from all Greek taxes, present and future, there will be distributed yearly various lots of a total amount of 3,000,000 drachmas. The loan is secured by the surplus of the revenue assigned to the service of the Greek Debt and the tax on alcohol, and is redeemable in 60 years by annual drawings. The proceeds of these revenues for the first five months of this year show a considerable increase over the corresponding period, which was itself a year of record. The following table shows the amount collected during the two periods :—

A.—RECEIPTS LIABLE to DISTRIBUTION of the SURPLUS.

	1920. Drachmas.	1919. Drachmas.
January-May	25,762,452.62 ..	18,792,867.90

Increase in 1920, 6,969,584.72.

B.—ADDITIONAL REVENUE (of the Ports Assigned).

January-May	59,484,183.20 ..	31,526,976.40

Increase in 1920, 27,957,206.80.

Thus the revenues assigned to the services of nearly the whole of the Greek Debt show for many years a steady and gradual increase, which is expected to become still greater when peace conditions return.

The Ministry of National Economy has received proposals from foreign houses for the opening of big department stores for the sale of all kinds of goods at popular prices. This kind of stores is still unknown in Greece, and the people has always been, and is especially now, the victim of small profiteers. Should British companies decide to open branches in Greece, they would find an open field for profitable business. The same applies to the various works, which are now under consideration, and will have to be made in the near future. Already the Athens-Rome Railway, the supplying of water to Athens by means of an extended irrigation system, the utilisation of the various rivers and lakes for industrial purposes, and other constructional works are being studied. The study for the construction of various works, necessitated by the every-day increasing importance of the port of Piræus, and of some other works, has been undertaken by some English syndicates. Still, there is a vast ground for technical and mechanical constructions, particularly after the addition of the liberated territories, and it is expected that after the signing of peace with Turkey foreign capital will have many opportunities for profitable employment.

One of the most disagreeable consequences of the war is the house famine, which is severely felt, especially in Athens. In fact, the building of new houses has been practically at a standstill since the Balkan wars. On the other hand, the population of Athens is now estimated as being about threefold, compared to what it amounted to in 1912. Nothing has as yet been done to promote the construction of new houses. Rents for new houses and new leases are, on the average, five times greater than before the war. The moratorium recently published favours the owners. Moreover, instead of aiming at encouraging the building of new houses on building plots, of which the city is full—in the absence of more drastic measures to remedy the situation—it gives the right to the owners to demolish their houses and build new ones. In this way the scanty number of dwellings will be diminished still more for a period of at least a year to wait for the new buildings, and the number of the shelterless people will be increased, for the time being, giving at the same time more prey to hotel and house keepers and house owners.

SWITZERLAND.—BANKING DEVELOPMENTS.

(FROM OUR CORRESPONDENT.)

GENEVA, August 9.

THE Crédit Suisse has purchased the share majority of the Société Suisses de Banques et de Dépots in Lausanne. The Zurich bank intends for a while to continue this newly-acquired bank as an independent institution, but with the ultimate intention of full amalgamation. The Lausanne bank has branches in Geneva and Brussels. The shares had hitherto been held by the Société Générale, of Paris, this having been one of the very few foreign-controlled Swiss banks. The Paris Société Générale had needed its own bank in Switzerland so long as the French public made large deposits in Switzerland before the war. Now that the French public is withdrawing its deposits from Switzerland the proprietorship of a Swiss bank has no longer any *raison d'être* for the Paris bank, which has taken the advantage of the temporary high value of the Swiss franc to sell its shares to the Crédit Suisse. Thus the Crédit Suisse, which was much less active in expansion than other banks during the war, now obtains a strong footing in Lausanne.

The Union des Banques Suisses, in Wintherthur, which created numerous new branches in French Switzerland last year, chiefly by absorbing private banking firms, is now taking over the Banca Svizzera-Americana, in Locarno and Lugano, with agencies in more than a dozen smaller places of Italian Switzerland. In Zurich, two local banks of minor importance, Inkasso and Effektenbank and Zurich Deposit Bank, amalgamated. The union of both, the new Depositbank, still remains an institution of merely local character.

Letters to the Editor.

SUGAR.

TO THE EDITOR OF THE ECONOMIST.

SIR,—It has just been announced in the Press that the Washington Department of Agriculture estimate that the forthcoming harvest of sugar-beets will prove a record crop. Last year, it is stated, 1,453,000,000 lbs of sugar were produced from sugar-beets, and the estimated produce for the present year is put at 2,007,000,000 lbs.

In view of the facts (i.) that we had sugar in our bonded warehouses at the end of the years 1918 and 1919 amounting to 7,655,000 cwts and 5,963,000 cwts respectively, compared with 4,762,000 cwts bonded at the end of 1913—when there was no scarcity of sugar (see page 137 of the *Economist* of July 24th last)—and (ii.) that the Food Controller has announced that our rations may be increased by 50 per cent. (which only amounts to an additional ¼ lb a week !) on the ground that the *high price* has caused people to forego much of their scanty allowance, surely the price might be largely reduced, and at once.—Yours faithfully, H. JAMES ROBINSON.

Isleworth, August 11th, 1920.

REDUCING E.P.D.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Mr Stanley, in your issue of the 7th, puts forward several suggestions for new taxes for the purpose of reducing and eventually abolishing the E.P.D. Many of his suggestions are sound, because they would prove both economical and convenient in the sense of being easily collected without loss of time or the necessity of setting up new departments and increasing the already large and expensive host of Government officials.

I venture to think, however, that the first suggestion Mr Stanley puts forward—the 1d stamp duty on purchases over 1s 6d—is a tax which cannot reasonably be applied to the rush and hurry of everyday life, and it would be open to considerable evasion, and would prove, as a somewhat similar tax did in France in 1918, an unmitigated nuisance to shopkeeper and purchaser, as every sale requires a receipted bill, or some other acknowledgment.

One hardly knows whether to take Mr Stanley seriously with regard to the piano tax, but it would certainly prove a boon to many sufferers, if it only acted as a new tax is popularly supposed to do, and reduced the number of taxable articles. An *ad valorem* stamp tax on chocolates and other fancy sweets is long overdue, whilst the ginger-beer and mineral water tax is at present inadequate, having regard to the excessive taxation and licence duty paid by tobacco and excisable liquor. Anyone who considers our present source of revenue cannot but be struck by the tremendous amount raised on some commodities, whilst others escape with little but the indirect taxation which falls to their lot through the materials used in producing the finished article.

Excisable liquor, for example, is estimated to return in duties and licences for the current year the sum of £204,900,000, or almost 15 per cent. of the total revenue to be collected, a sum far in excess of the amount which we ought reasonably to expect from any one industry, unless we desire to cripple it and throw hundreds of workers out of employment.

It is, of course, impossible to suggest any one tax which will fall proportionately on all citizens, having regard to their incomes or wages. Equality of taxation can only be achieved by many taxes carefully adjusted, so that each person will pay an equal percentage of his income, or as near as possible, and to my mind the introduction of some of Mr Stanley's suggestions would ensure our revenue being raised from a larger field than at present, and many newcomers would be introduced into the shearing pen; with this extra taxation the depressing and unpopular E.P.D. could be reduced, and later dispensed with entirely, whilst the mere man who worships Lady Nicotine and the moderate disciple of Bacchus might in their turn receive some consideration—a slight recompense for the way they have been fleeced by successive Chancellors of the Exchequer.—I am, Sir, &c., EDMUND ROWSON.

August 9th, 1920.

THE QUESTION OF CREDIT.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I see that your correspondent Mr Arthur Kitson accuses me of misrepresenting his views. I should be exceedingly sorry if I thought I had made such a mistake, but at present I fail to see that I have done so. If Mr Kitson thinks the disproportion between purchasing power and goods can be levelled up by increasing the output of goods, he must mean that the supply of goods is at present below the supply of purchasing power. But he also says that Mr Johnston is quite correct in supposing that the purchasing power (supply of currency) is inadequate to purchase the goods produced by labour (*i.e.*, to pay the wages). I cannot see that the supply of goods and purchasing power can both be below each other; it is a contradiction in your correspondent's reasoning. Neither can I see how an equally increased supply of both goods and currency can ever level up the disproportion between them.

Mr Kitson does not say a word in explanation of this difficulty; or show the least reason why an increase of legal tender should not cause a further depreciation of the currency, and a corresponding further inflation of prices. As both he and his friend Mr Johnston refer to those who differ from their view of the matter as "deflationists," I thought they would consider themselves correctly described as "inflationists"; but as the term seems to be offensive, I will endeavour not to repeat it. I cannot, however, accept their self-chosen title of "truly sane deflationists," as it seems rather an uncourteous reflection on the mental capacity of everyone who may venture to question these gentlemen's financial dicta.

In default of any argument, Mr Kitson threatens us with a commercial cataclysm. I agree that it is very possible that we shall shortly find ourselves suffering a serious trade depression, with falling prices and the usual unemployment. But what I am trying to point out is that a mere increase of legal tender paper offers us no means of escape from such catastrophe.

Mr Kitson's citation of unemployment figures in no wise proves that the unemployment is caused by want of legal tender. There has been full employment since the war began, in spite of the fact that, as Mr Kitson maintains, legal tender has failed to keep pace.

I suspect that owing to the suspension of the gold standard check on values, and the consequent possibility of indefinitely high wages, the wages eat into normal profits while they are still in the form of credit or securities. This makes production less profitable than it appears from balance-sheets, and some producers find it necessary to reduce their output and cause unemployment. While every employer thinks it right to stop production when it threatens to cause him loss, we can hardly complain if the banks reduce the advances that they will allow, if they fear loss by them. One would imagine from your correspondents' views on credit that they think banks exist solely to pay manufacturers' wages bills, whether they think the security offered is good enough or not.—Yours faithfully, ALBERT WALLIS.

Westacre, Station road, Kettering, August 9th, 1920.

A NATIONAL FISCAL INQUIRY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Mr Synnott says my letter needs little answer, but, nevertheless, he essays a fairly elaborate reply. Our trouble, I take it, just now is "debt"—plain, commonplace, unvarnished debt. Don't let us try to draw red herrings across the trail. It is certainly a mere "truism,"

but it is none the less true for all that. You can't get rid of it by merely ignoring it, or by talking about something else. So far as I know, there is really only one way of dealing effectively with debt. It is an old-fashioned way, but it has stood the test of the ages, and that is to pay it. That is the "proper method," whatever kind of debt it may be—public or private, funded or unfunded, internal or external. All other "methods"—except repudiation, which, I presume, Mr Synnott, like myself, will rule out of court—are mere euphemisms for shoving off the evil day, which will surely come, with cumulative effect.

Mr Synnott talks grandly about public opinion controlling the Government. But is not public opinion a little behind time? Was not the right time at the last general election, when public opinion swept this Government into power amid great applause and wild enthusiasm? Then public opinion sowed the wind, and now it grumbles at the harvest of the whirlwind. Then public opinion called the tune; now it objects to pay the piper.

He also tells us that the "reasoned opinion from practical men killed the war wealth levy." But is he sure the war wealth levy, or its double, the capital levy, is killed? A month ago he doubted if this hydra-headed monster were dead, and suspected it was only sleeping. Some people think it is neither the one nor the other, but only lying low, waiting till the financial position becomes so involved (of which they profess to see ominous signs already) that it can rise up again.

No, sir, there is only one way of dealing with debt—the historic, traditional, old-fashioned way. It is the heavy annual tribute in the shape of interest this debt demands that is responsible for a large part of the present discontent, and you cannot remove the discontent without removing the cause thereof.—Yours, &c.,

R. H. K. Clark.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

Ticket.	Account.
August 26.	August 27.

In spite of the various drawbacks imposed upon Stock Exchange affairs by foreign politics, by the outlook in the money market, and the holiday season, there has been a fair amount of business in certain of the markets. It cannot be said, however, that real activity was marked in any department. A few violent changes occurred to enliven Industrials, but the very violence of the movements indicates narrowness of markets, and the absence of steadying influence from public business. The Stock Exchange regards without anxiety the prospect of dearer money, although an 8 per cent. Bank rate is held to come within the bounds of probability during the next few weeks.

Gilt-edged stocks remain the firmest market in the House. What investment there is flows into the War stock and its satellites. Prices in this section are little changed on the week. Amongst Home Railway prior-charge stocks the debentures show up the best, there being a good deal of demand for these, although, on the other hand, preference stocks have given way. The Foregn market was played upon by the conflicting considerations which have radiated from the Russian-Polish situation. The inclination has been towards lower levels, and a recovery on Wednesday was practically lost before the week finished. The action of France in the reported support of General Wrangel came as a surprise. German Threes have weakened, and, amongst South Americans, Brazilians gave way rather noticeably, partly on sales from Paris.

A feeble attempt to rally Home Railway prices met with a trifling success, but the public are as far from the market as ever, so far as new business is concerned. The Grand Trunk list is still heavy, and Mexicans eased off for want of trade. Argentine railway stocks moved with the changing sentiment of each day, while Brazilian Rails have followed the course set by Brazilian Government bonds. Various Russian Railway guaranteed issues have shed three or four points.

The disappointment in connection with the price of raw rubber makes itself felt more through absence of business than by a fall in prices. American selling of raw rubber is so unexpected that it might easily have upset a market in shares the holders of which are less confident of the future than are rubber proprietors. Amongst Oil shares, smart rises occurred in Burmahs, Mexican Eagles (on the bringing in of a new and important well), Shells, and several of the Trinidad favourites, while Kern Rivers and a few other medium-priced shares moved up in the wake of the advance set by the leaders. Pressure to sell Shells from America has been relaxed. It may be observed that, unless the Shell company extends the date for sending in applications for new shares, Monday next, August 16th, is the last day upon which allottees can claim their rights. In the Shipping market, P. and O. fell at one time to 390, but at this figure buying came in, and restored the quotation to 400. Other Shipping shares are heavy, in consequence of increased uncertainty in regard to the fall in freight rates. Dunlops rose in one day from 7¼ to £8 a share, on rumours of the splitting scheme being put into early operation,

and Courtaulds also recovered substantially from their lowest. Textiles as a whole are a less nervous market, and the same description will adequately cover a number of other Industrial departments, although the Iron and Steel list remains weak, owing to further sales from the provinces, where the coal and labour difficulties are leading to nervousness on the part of shareholders in those companies most closely concerned. Nitrate shares are a trifle lower. The sharp fall in Tea shares seems to be stayed for the time being, though it is none too easy to sell in the present state of the market. Marconis rallied from the lowest prices touched early in the week, and the Cable group is hard, with the exception of a few of the newly issued stocks belonging to the Eastern group, which have been inclined to go back a trifle. Membership of the Stock Exchange has been increased in respect of the current year to 98, and the price of House shares is 114, with Nominations about £75.

July returns from the gold-producing companies of the Transvaal are decidedly good, and with the price of the metal keeping up at a high level, the Kaffir market has shown a fair amount of strength, though this was not backed by accession of business from outside. The quotation this week of a number of leading Kaffir shares, ex dividend, brought in a few buyers, but, on the whole, the market is very neglected, and Rhodesians are equally ignored. De Beers have moved less sharply this week than they have been doing of late, but Rio Tintos dropped to 35 before they recovered £1. Amongst West Africans, Tin Areas and Fanti Consols have divided between them what little interest there has been in this market. The former are flat on the new capital proposals. Broken Hills gave way perceptibly in the depression which ruled during the early days of the week, but picked up part of their loss later on. Russo-Asiatics have been interesting more as an index to the sentiment of the moment than for any other reason. The price, after dropping to 9s 6d sellers, recovered to half-a-sovereign. Burmah Corporations keep a firm market after their big rise. In other Mining shares the changes are insignificant and few.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

5-15 Year Treasury Bonds, repayable at par on May 1, 1935, bearing interest at a minimum rate of £5 per cent. per annum, payable half-yearly on May 1st and November 1st. Price of issue fixed by H.M. Treasury at £100 per cent., payable on application. These are still on offer. For full particulars see *Economist* of May 1, 1920, pages 899 and 915.

London Housing Bonds.—Registered bonds for £5 each or multiples thereof are obtainable for terms of 5, 10, or 15 years, at applicant's choice. Six per cent. interest and full repayment when due are guaranteed by the London County Council on the security of London's rates. Interest payable each September 30th and March 31st. The money will be applied solely for the purpose of housing schemes approved by the Government, and in particular to finance the housing schemes of the Metropolitan Borough Councils. We referred to these bonds in a leader in the *Economist* on June 12th, page 1282.

Marshall, Sons, and Co. — Paid-up capital £750,000 in £500,000 ordinary shares of £1 each and 50,000 4 per cent., free of tax, cumulative preference shares of £5 each. The present is an offer of £400,000 5½ per cent., free of tax, first mortgage debentures at 95, redeemable on or before July 1, 1946, by annual drawings at par, or purchases, beginning in 1922. These form part of an issue of £500,000, and will be secured by a deed of trust, constituting a first specific mortgage on all the company's property and assets, present and future. The company reserves the right to redeem any of the debentures at £102 on six months' notice. The company was formed in 1862, and manufactures steam tractors, traction engines, road rollers, and various other kinds of machinery in its works at Gainsborough. Net assets at the date of the last balance sheet amounted to £1,295,700, no allowance being made for goodwill, and since 1913 net profits have risen from £54,000 to £116,100. The debentures are well secured both as to principal and interest, the yield working out at nearly 8¼ per cent., subject to tax and allowing for redemption at par.

Wallace (Glasgow), Limited.—Capital £1,000,000, in £1 shares. The present is an issue of 850,000 shares, of which 400,000 are now offered at par, 450,000 being issued in part payment of the purchase consideration. The company has been formed to acquire as at December 31st last the business of Wallace Farm Implements, Limited, engineers, &c., and makers of the "Glasgow" farm tractor, to complete the purchase of the National Projectile Factory at Cardonald, near Glasgow, and to acquire certain engineering patents. The net assets of Wallace Farm Implements, Limited, to be acquired, including the balance of purchase of the projectile factory are valued at £624,000, including £230,000 for patents of "Glasgow" tractors. The purchase price for these assets is fixed at £430,000, of which £30,000 will be in cash and the remainder in shares. For the sleeve-valve patents the company is to pay £75,000 and 250,000 dollars in cash and £50,000 in shares. The Wallace business has been in existence for 70 years, and in 1896 John Wallace and Sons, Limited, was incorporated, but no record of the company's financial history is vouchsafed to the intending investor, who is instead asked to pin his faith on optimistic estimates as to future earnings. There will, no doubt, be a heavy demand for agricultural machinery throughout the world for many years to come, but we cannot recommend the average investor to risk his money without further information.

Bath Tramways Motor.—Capital £60,000, in shares of £1 each, of which 30,000 are now offered for subscription at par. The company has been formed to acquire from the Bath Electric Tramways, Limited, its motor-omnibus undertaking and the foundry in connection with it. The vendor company's general manager values the equipment to be purchased at £39,935, which has been fixed as the purchase price, to be satisfied as to £20,000 in fully-paid shares and as to the balance in cash. No part of the consideration is payable for goodwill. The general manager also estimates an annual profit with great exactitude at £6,643, subject to taxation. In the absence of any independent valuation or figures showing past results, the issue should be left to the consideration of investors with a thorough knowledge of local conditions.

Province of Buenos Ayres Waterworks.—Authorised capital of £1,000,000—in ordinary "A" shares of £5 each, £650,000, ordinary "B" shares of 1s each, £4,400, and 5 per cent. cumulative preference shares of £5 each, £345,600, of which £450,000 "A," £4,400 "B" and £150,000 preference shares have been issued and paid up. The present is an issue at par of £125,000 10 per cent. first mortgage debenture stock, redeemable on August 10, 1930, at 105, or earlier on six months' notice at the company's option. The issue forms part of a total issue of £250,000, and is required to pay off temporary loans in the form of note certificates for £100,000, of which £60,000 have matured and £40,000 mature on July 1, 1921. The debenture stock will be secured by trust deed on the property of the company, constructed and equipped, at a cost, to the end of 1919, of £701,600. The company was formed in 1908, and in the four years 1912-1915 net revenue rose from £21,496 to £33,317, but since then it has gradually fallen to £11,756 in 1918 and £15,400 in 1919. The local

committee of the company in Buenos Ayres are taking steps to obtain power to raise the tariff, as has been permitted to many other similar companies in Argentina. At the present rate revenue is barely sufficient to cover the interest on the debenture stock. The issue has been underwritten for a commission of 3 per cent.

Barrow Entertainments. — Capital £50,000, in ordinary shares of £1 each. The present is an issue at par of 40,000 shares. The company is to acquire a theatre at Barrow-in-Furness and convert it into a picture theatre, at the same time increasing the seating accommodation. The vendor has acquired the premises for £24,500, and sells it to the company for £32,500, presumably in cash. No independent valuation is presented. Only estimates of profits are given, and preliminary expenses are put at £2,500. The issue is one that should be left severely alone by the investor who has to rely solely on the prospectus for his information.

Victoria Enterprises, Limited. — Capital £150,000 in 65,000 8 per cent. cumulative participating preference shares and 85,000 ordinary shares, both of £1 each, of which 50,000 preference and 30,000 ordinary are now offered for subscription at par. According to the prospectus, the preference shares are entitled to a dividend of 8 per cent. "after payment of a non-cumulative dividend at the rate of 20 per cent. per annum on the ordinary shares," but we imagine that a printer's error is responsible for this statement. The company has been formed to acquire a picture palace at Chesterfield, and several billiard halls in the neighbourhood. It is proposed to pull down the present building and to erect a cinema house to seat 2,000, large billiard saloons for 35 tables, café, restaurant, &c., &c. The company is to pay £22,727 in cash and £20,000 in shares for its various acquisitions, of which £7,000 is for goodwill. An annual profit of £18,332 is estimated, but no valuation of the properties to be acquired is forthcoming. The prospectus claims that picture theatres "can no longer be regarded as mere speculative enterprises," but we venture to think that no other description would better fit this particular specimen.

Selby Picture Houses.—Capital £25,000, in 5,000 6 per cent. non-cumulative preference shares and 20,000 ordinary shares, both of £1 each, of which 16,000 ordinary shares are now offered for subscription at par. The company has been formed to acquire two picture theatres in Selby, the one freehold and the other leasehold, independently valued at £27,100. The directors have obtained these premises for £17,000, of which £5,000 is in preference shares and the balance in cash, and are selling them to the company for £22,000, of which £5,000 is to be in preference shares, £4,000 in ordinary shares, and £13,000 in cash. Preliminary expenses, payable by the company, are estimated at £800. The issue is quite unsuitable to any but local investors, who may possibly have some better reason for subscribing than is to be found in the prospectus.

OIL OUTPUTS.

THE KERN RIVER OILFIELDS OF CALIFORNIA, LIMITED.—The total production for July amounted to 140,981 barrels, or approximately 20,140 tons, including 87,949 barrels from the properties of the St Helens Petroleum Co., Limited.

THE BRITISH BURMAH PETROLEUM COMPANY, LIMITED.—A cablegram has been received from Burmah reporting the total production of crude oil by this company, and the Rangoon Oil Company, Limited, amounted to 2,280 barrels for the month of July.

LOBITOS OILFIELDS, LIMITED.—The production for July is cabled as 8,425 tons.

TRINIDAD LEASEHOLD, LIMITED.—Oil produced during July, 12,700 tons.

THE MEXICAN EAGLE OIL COMPANY, LIMITED.—The London agents have received the following cable advice from Mexico:—"Well No. 1. Lot 245, Los Naranjos came in 7th inst. at 2,232 feet, estimated 20,000 barrels (daily) shut in."

COMPANY MEETINGS, &c.

MITCHELLS AND BUTLER'S, LIMITED.

BOARD'S CAUTIOUS POLICY.

THE CHAIRMAN ON TEETOTAL PARTY'S METHODS.

PROHIBITION IN THE U.S.A.

The thirty-third annual general meeting of the ordinary shareholders of this company was held at the White Horse Hotel, Birmingham, on Thursday, August 12, 1920, under the presidency of Mr W. Waters Butler.

The Chairman said: Ladies and Gentlemen,—In moving the adoption of the report and balance-sheet there are a few points in connection with the company's operations of the past financial year upon which I desire to make observations.

In February last, the company decided to capitalise reserves to the amount of £1,345,590. This capitalisation resulted in absorbing approximately the whole of the inner reserves then existing, so that the balance-sheet to-day, while still containing an inner reserve, shows the book values of the assets more clearly than the balance-sheets of previous years. I wish you to understand that no assets was revalued or written up for the purpose of such capitalisation, notwithstanding that the book values, particularly those of the licensed properties, were much below the ruling market prices.

Personally, I am not a keen supporter of the practice of the formation of "inner reserves," although all know how necessary it is to make provision for such a contingency as a fall which might come about in the rapidly fluctuating values of consumable stocks, which in our business are so dependent upon the world's harvests. During the war we were, and since have been, exceedingly fortunate in our purchases of brewing materials.

RECORD STOCK OF WINES AND SPIRITS.

At the outbreak of the war we were holders of a very large well-bought stock, and at the present time we hold the largest stock, both as regards bulk and value, that we have ever held. It has always been our practice to have in bond—as we have now—several years' supplies of wines and spirits, in order to ensure that only well-matured liquors are offered to our patrons. In no sense can the unfortunate and odious term of "publichousy" be applied to the quality of our goods. No better wines or spirits, generally speaking, are placed upon any gentleman's table than those served in the public and saloon bars of our licensed premises. I do wish our shareholders would patronise more often their own establishment for their requirements, thereby not only augmenting their own profits, but by their example encouraging others to become customers of the company.

BOARD'S CAUTIOUS POLICY.

Thus while our "inner reserve" is but a small fraction of that of past years, prudence still prevails and risks are realised and provided for. The magnitude of the contingencies that may arise through legislative action or trade depression one cannot measure; they can be anticipated only from year to year according to the conditions prevailing at the moment when we are dealing with the allocation of the annual profits. Our exposed reserve should, as far as possible, provide for any fall in values that might come about through legislation involving restriction of trading or permanent taxation, reducing the profit-earning character of our assets, while our balance of profit and loss account should aid in supporting dividends in periods of trade depression.

Speaking only for myself, although I think my co-directors would support me in this, I consider that a balance-sheet issued to shareholders should make manifest as fully as possible, not only the liabilities, but also the assets of a company, and thereby enable a shareholder to see the full extent of his holding and get some guide as to its realisable value.

NO INCREASE TO "INNER RESERVE" IN FUTURE.

If, then, the board share this view it may not be our practice in future to place to the "inner reserve" any large sums from the profits of the year, firstly for the reasons already stated; secondly, that we have now largely capitalised the reserves, which we considered were truly represented by profit-earning assets, and on our much increased capital it will have to be our endeavour to at least maintain the dividend we are now paying; and, thirdly, that in consequence of the onerous and unexpected amount of what I fear must be looked upon as permanent taxation, which will create a greater competitive spirit than has lately prevailed, the balance of undivided profit may not be more than is necessary to rebuild a reserve for contingencies which may arise through legislative action, and to provide funds for the maintenance of our trade position without having recourse to loans or the raising of fresh capital upon such costly terms as now prevail. Your company has always been a progressive one, and it is not your board's intention to sap its strong financial foundations by daring finance, but rather to strengthen them with capital derived from profits left over after a prudent distribution of dividends.

NEW HOUSES AND COMPETITION.

Notwithstanding the policy of the company to maintain its properties in the highest state of decorative repair, and in perfect sanitary condition, which has on many occasions evoked the commendation of the licensing authorities, I can assure you there is still room for expenditure in connection with the modernising and enlarging of properties, necessitated by the reduction in the number of licences in certain areas of the City, but I am afraid with little hope of obtaining an adequate return thereon if the cost of the carrying out of same is maintained at the present high level. I have no hesitancy in stating that a new or largely reconstructed licensed house cannot be built to-day to yield a profitable return on the outlay if it is in a situation where it has to compete with redundant houses or meet any unfair competitive system of trading, no matter of what description. The "fewer the better" policy was never more necessary than to-day. There must be concentrated trading under the most efficient conditions if a reasonable commercial profit is to be obtained from the very low rate of gross profits resulting from the recent Budget taxation, coupled as it is with controlled retail prices, and the daily increasing cost of labour, local taxation, repairs, and other overhead charges.

BALANCE-SHEET ITEMS.

There are items in the balance-sheet which are abnormal, and upon which some shareholders may desire enlightenment. On the liability side, while the repayment of the loan of £400,000 in connection with the acquisition of Holders Brewery, Limited, may be spread over ten years, the board thought it advisable to anticipate the payment of three years' instalments, totalling £120,000, as our cash position at the time was favourable to the operation. The repayment released £160,000 of debentures forming part of £533,400 debentures securing the loan. Trade creditors to the large amount of £2,252,099 11s 11d may at first glance create a feeling of anxiety, but when I inform you that of this sum no less than £1,894,801 10s 5d represents beer duties and reserves for excess profits duty and income-tax, but not due for payment for some time, you get some idea of how largely we are tax-gatherers for the State, for which service the State, when imposing heavy additions to the beer and spirit duties in the last Budget, allowed no margin to the trader for the cost of collection or bad debts.

INVESTMENTS, CASH POSITION, &c.

Among our investments it will be noted that we have purchased housing bonds. We felt that as our workpeople resided in Birmingham and Smethwick, it was incumbent upon us to assist the local authorities in combating the great dearth of housing accommodation, and so we took up £20,000 of the bonds they were offering, but I must say there is not much encouragement to do this when one sees the uneconomic results brought about through the high costs of construction.

Our cash position at the moment is satisfactory, but we shall have to budget carefully and regulate the rate of our commitments to avoid exceeding the amount which our profits will provide and our dividends leave free for capital expenditure.

Brewery owners are in no better position than other traders to raise or borrow capital at the unprofitable rates prevailing. Our balance-sheet, I think you will agree, clearly exhibits that you are the owners of a thoroughly sound and profitable undertaking, and I trust will remain so to the end. It may interest the shareholders to know that the output of our breweries last year was only exceeded by two other breweries in the United Kingdom; a position we shall do our utmost to improve upon.

I feel that the near future must be occupied mainly with making our present possessions yield their fullest and best results, rather than we should add to our size by unprofitable extensions. The largest fruit tree does not necessarily yield the best crop.

BEER AND SPIRITS DUTY.

Just as the increase in excess profits duty startled the commercial world and greatly upset the course of business, so the enormous increase in the beer and spirit duties fell as a bomb-shell upon our industry. It is really most unjust to the consumer of beer and spirits that the duties represent so high a proportion as one-half to two-thirds of the cost of the article. He literally drinks "duty," and there is little else in his beverage for him to taste. A person consuming two quarts of beer of standard gravity per diem contributes more than £25 per annum to the revenue in beer duty alone, and it must be remembered the taxable limit is stated to be £22 a head.

TRIBUTE TO MR CHAMBERLAIN.

I fully realise how difficult it is to get some people to pay their proper share of direct taxation, but if consumers would realise how much indirect taxation they pay, and how much more costly it is to pay a tax indirectly rather than directly, we should have a great outcry against the unfairness of the method of making a few articles of consumption a big source of taxation, and how those who abstain from consuming them escape their proper contribution to the revenue of the State. Although we may regret that our respected member, Mr Austen Chamberlain, as Chancellor of the Exchequer, imposed big and quite unexpected additional duties upon the articles we trade in, I readily accept his declaration that it was not with any other motive than to raise revenue which was urgently needed that he supported the increased duties. Mr Chamberlain's utterances in the past plainly indicate that he is not a member of the "pussyfoot" crowd, and personally I feel the licensed trade has no enemy in him. Much as many of us may feel he ought to have looked in some other direction for his revenue, one cannot but admire his readiness to discuss his proposals with taxpayers, and of how in the absence of the submission of good substitutes for them he manfully stands up to any opposition, a characteristic we so greatly admired in his late father.

What effect this heavy taxation of alcoholic beverages, estimated to yield over £217,000,000 annually, will have upon the consumption it is difficult to say, but it is estimated to reduce by about 25 per cent. the amount of spirits consumed in pre-war days. The community, generally, will not suffer if they make up their ration with "good honest beer," in place of the more costly and potent beverage.

PRESENT BEER STRENGTH.

I think the bulk of beer brewed may attain the barrelage of pre-war days, but the alcoholic strength will probably be 20 per cent. lower, and, personally, while I consider much of the so-called beer we are compelled to brew to-day entails a wasteful expenditure of power and labour in handling materials, and in washing, maintaining, and delivering a large number of casks to the consumer, yet so long as the public are satisfied with a beverage of medium alcoholic content—practically non-intoxicating—it is to the advantage of the community, and certainly to the good reputation and continuance of our industry that we should not try to re-create a demand for the strong alcoholic beers of pre-war days. The public have now become accustomed to weaker beers, and to-day speak of certain types of beer as strong, which in pre-war days they would not have looked upon as such. I have no hesitancy in saying it is to the benefit of the public that they should be consumers of good beer, which is a stimulating food beverage, and is an ideal drink for manual workers, rather than they should be driven through the retailing of "washy" beers to become consumers of spirits, which should not be taken as a thirst-quenching agent, but only as a stimulating beverage.

BEER CONSUMPTION IN THE SOUTH AND NORTH.

I am convinced that as the ratio of spirit sales to beer sales increases, you will find a greater tendency to insobriety. In Birmingham, the sale of spirits compared with that of beer and other beverages in a fully-licensed house is only one-third of that prevailing in, say, a fully-licensed house in the North of England, while as you travel still further north into Scotland, the sale of spirits to beer would be nearer five times greater than in Birmingham. At the same time it must be agreed that the climatic conditions of the North appear to induce the consumer there to drink spirits rather than beer. Yet, I often think the undesirable practice so prevalent in the North of England and Scotland of calling for spirits and beer at one order, sometimes with the consumption of the spirits "neat," or by adding them to the beer (known as "lacing the beer,") might be greatly checked if stronger beers were on sale than has been customary in those districts. The Midlands have always been noted for beers of a satisfying quality, and to that fact I attribute the comparatively low consumption of spirits and the resultant good record of sobriety.

DRUNKENNESS : PRE-WAR AND PRESENT DAY.

Recently the statistics of drunkenness for the year 1919 have been made public, and while the total convictions were much larger than those of 1918, there were many causes, as set out in the return, to account for that increase, mainly the return of a large number of men from war service, with the majority of the people in a joyous mood welcoming the home-coming of their relatives and friends and celebrating peace conditions generally. After the great strain upon all during those awful war years, one can readily understand that relief brought with it a spirit of determination to spend a time more free from the restraint that war had imposed upon them. Under these circumstances, it is surprising that the figures do not show a much greater advance. Of course, the teetotal fanatic, always ready to present the blackest and most depressing picture, is loudly proclaiming these 1919 figures as indicating an increase in insobriety, taking care not to mention the fact that notwithstanding an increase in the population over that of the year before the war, the convictions in 1919 were less than one-third of those of 1913, and that they represent less than one person in 500 being convicted once during the year. I am pleased to note that the Midland counties show the greatest decrease—namely, 80 per cent.—in drunkenness when compared with 1913. These slanderers will next contend that there is strong evidence of immorality during 1919, as the birth-rate figures show an advance over 1918.

I trust we shall see continually improving evidence of increased sobriety. With an educated, well-housed populace, employed under hygienic conditions in their work places, adequately remunerated, patronising well-equipped and roomy refreshment houses supplying not only alcoholic and non-alcoholic, but also solid refreshments, and conducted by owners capable of obtaining a living profit without having to resort to unhealthy competition, then, under such conditions, you need have no fear as to the conduct of the consumer, no matter what beverage he may be consuming.

TRADING PROSPECTS.

I regret there are signs of a general trade depression, which must affect our trading results. I dread the return of the undesirable wholesale and retail competitive methods of trading of pre-war days. They need no enumeration. To-day many of them are offences under the Central Control Board's Regulations, and I trust they will remain so in any future licensing enactments. Certain of these regulations were imposed in war time, with the object of suppressing evils arising from certain forms of trading. It is to the advantage of the licensed trade generally that the recrudescence of any such practices which are detrimental to the community should be prevented. Unfortunately onerous taxation, high operating costs, and redundant licensed properties must intensify competition and make it more difficult for a trader to obtain a reasonable return on his capital and adequate remuneration for his labours.

In our industry, unhealthy competition not only endangers the financial position of undertakings, but affords openings for our enemies to press for legislation, not with the object of bettering the conditions to meet the requirements of the public, but rather to abolish by confiscation the property of traders and debar the public of facilities for obtaining their requirements to which they are justly entitled.

LICENSING LEGISLATION.

From a legislation point of view we are, in my opinion, during the next twelve months about to pass through the most critical period I ever remember. A licensing Bill is much overdue. Some people may say why a Bill at all, why not abolish the Central Control Board and return to the pre-war state? No one wishes to wholly return to pre-war conditions, and you cannot abolish the Central Control Board without returning to pre-war conditions. Therefore there must be an Act to make permanent those war-time regulations which are applicable to normal times with advantage to all concerned. The fear of the trade is—and there is good justification for it—that just as during the war the so-called temperance party under cover of slanderous statements in regard to the workmen and women of this country unsuccessfully attempted to take an unfair advantage of the critical position in which the country was placed and deprive the citizens of some of their rights and privileges, similarly in the forthcoming Bill we may see an attempt made to add to the matters for which the Bill should properly provide controversial extraneous subjects, such as, for example, Local Veto; upon which the Government has not sought or received a mandate from the country.

TEETOTAL PARTY'S METHODS.

Such proposals as local veto and prohibition are alien to the principles of a liberty-loving people. So prevalent is the feeling among the public that these cannot be imposed, that there is the danger of not realising the activities of the teetotal party who are stealthily preparing to bring about enactment of these measures.

I have not the slightest fear of prohibition coming about if it is placed as a direct issue to the electorate; the supporters of it fully realise that the country would not knowingly accept it, and do not intend to put it to the test. But, as was done in the United

States, they aim at stealing a march upon the nation by endeavouring to attain their end with "prohibition by instalments."

UNITED KINGDOM ALLIANCE AND LOCAL OPTION.

In this country you will find organised bodies like the United Kingdom Alliance, established in 1853, so long ago as 67 years, to bring about "the total and immediate legislative suppression of the traffic in intoxicating liquors as beverages," sending out speakers who, when tackled, will say that they are not demanding prohibition—yet the telegraphic address of the society is "Prohibition"—but only pleading for the people to be able to please themselves under what is known as Local Option, which is nothing but a disguised form of veto, for the so-called option it gives the electors is that of retaining only a limited amount of liberty, or having none at all; but there must be no extension of liberty. They may retain their present houses of refreshment, or have their number reduced, or have none at all, but no matter how much the growth of a town may call for increased facilities for refreshment, no voting may bring about the provision of same. We often see in our Licensing Courts when an application is made for a new licence, and the applicant produces incontrovertible evidence showing that a majority of the householders in the vicinity desire the grant of the licence, of a certainty there will automatically appear a solicitor in case after case, and oppose the grant with little or no evidence to support his opposition. So it is with this so-called Local Option, or more truly local prohibition, you have no option to better your conditions, no matter what your present state or requirements may be.

RESULTS OF LOCAL OPTION.

Local Option is an insidious method of creating conditions which will tend to increase drunkenness. For what happens as a result of a locality (or a State as in America) going "dry." You get immigration into the adjacent "wet" territory, and like a camel about to cross a desert, the traveller, before returning to his "dry" area takes aboard a full reserve of liquor internally and externally, and this liquor he carries away is of the easily transportable, concentrated, potent character, namely spirits, with the results that the "wet" area becomes "wetter," the consumer a debased drinker, while the licensed trader, not knowing when his occupation may come to an end, carries on his business under the worst possible conditions, taking any risk to make money while he may. In the "dry" area you foster an utter disregard for the law, and I need not remind you of what that leads to. Those are the conditions which the Local Vetoists strive for. They have got their awful example, the bait for their next victim. They then endeavour to attain their object by the aid of blatant ranting speakers, who by entrenching themselves in places of worship, by making use of lurid pictures in cinemas, and even by teaching young children distorted facts about alcohol, build up a tale of horror and misrepresentation. Their methods will be successful in this country if not counteracted by exposure, as I am pleased to say is being well done daily by our Trade Defence Organisations, who are fully aware of the methods which were used in America to place fetters on the freedom of a people who were looked upon as the greatest lovers and upholders of personal liberty. This country did much to aid in abolishing slavery in America; we do not intend the "dumped" missionaries of that country to reverse the process in our land and make us slaves.

PROHIBITION IN THE UNITED STATES.

The lure in the United States, which finally brought about national prohibition, was a combination cry of the dreadful saloon, the German-run American breweries, and the despicable slander on the American soldier over here and in France, who was said to be suffering from an excess of alcohol—a lying statement condemned by General Pershing himself. The American has not yet realised that he is "bone dry" for the simple reason that in reality he is not yet so, notwithstanding the huge expenditure of the State in hunting down its citizens who are evading their non-effective law. When the cellars of the well-to-do in the States—and their number is not small—stacked to the ceiling with the best of wines and spirits at the time of the enactment of prohibition, are nearing depletion, and the owners are approaching a truly "dry" state, we shall be able to more fully realise whether prohibition was passed honestly and with the approval of the absent manhood of the States, or through the apathy of those who thought it would not come about, but as a precaution filled their cellars, or through the tub-thumping of the well-paid orators of the Anti-saloon League taking an unscrupulous advantage of the trying times through which the people were passing to play upon their feelings with harrowing falsehoods. I predict that the States will again be "wet" before we see England "dry," providing we take care now we know the wily ways of the prohibitionists to do all in our power to oppose them, and to take steps to neutralise their poison gas by holding up the torch of truth so that all may clearly see the oncoming and danger of their vapourings. Apathy in this struggle is our greatest enemy. It is the duty of everyone connected with the industry, whether a shareholder or a cask washer, to actively interest not only themselves, but also the public, against this teetotal campaign, for if our enemies succeed it will bring ruination upon many, deprive thousands of their means of livelihood, stir up a feeling of class hatred, and add to the unfortunate prevailing spirit of unrest, which all well-wishers of their country are doing their utmost

to remove by engendering a better and closer understanding among all members of the community.

As to the nature of the forthcoming Licensing Bill, I am quite in the dark. Because I am a member of the Central Control Board, I am often wrongly credited with possessing inner knowledge of the Government's licensing policy, which, it is assumed, will be based on the experience of the Central Control Board, in connection with its regulations. I have on more than one occasion expressed my personal opinion as to what I consider is the best solution of the eternal licensing problem, and I have had no reason to alter my views. I can only say I feel strongly that there was never a better time for the moderates, inside and outside of the licensed trade, to agree upon the direction which licensing legislation should take, and there never has been in my lifetime a Government in a stronger position than that now in office to enact such legislation and to ignore the opposition of extremists, whether coming from those whose fanatical proposals are not acceptable to the public, or that coming from traders who fail to realise that the licensed trade must be conducted under conditions in accord with modern views.

Provided all interested keep a watchful eye on the course of events, and act when necessary, I have no reason to doubt that this time next year we shall be congratulating ourselves upon being in a less anxious position than we are anticipating to-day.

Mr H. W. Bainbridge seconded, and the report was adopted. Dr Harold Thwaite was elected a director.

The proceedings then terminated.

RAPHAEL TUCK AND SONS, LIMITED.

RECORD SALES AND PROFITS.

The ordinary general meeting of Raphael Tuck and Sons, Limited, was held, on the 11th instant, at Winchester House, London, Sir Adolph Tuck, Bart. (the chairman), presiding.

The secretary (Mr J. W. Bretherton) read the notice convening the meeting and the auditors' report.

The Chairman, moving the adoption of the report and accounts, referred to the fact that this was the nineteenth annual meeting of the company and the 54th year of the founding of the business of Raphael Tuck and Sons, Limited. After paying a well-deserved tribute to the memory of the late Mr Alfred Parsons, R.A., one of the directors of the company from its inception 20 years ago, Sir Adolph said that the results of the year's trading were almost a counterpart of the previous year's, so that the remarks he made twelve months ago might well apply to them. His exact words were: "Our actual sales during the past financial year are the largest on record, while our profits correspond with the increased turnover, and are also the largest in the history of the company." He was in the pleasant position of being able to repeat that statement with regard to the year under review, the actual sales again showing a considerable increase over those of the previous year, and the profits, while they did not work out in the same ratio, owing partly to increased expenditure, also exhibiting a gratifying increase.

PROPOSED INCREASE IN POSTCARD RATE.

Dwelling at some length upon the satisfactory state of the various departments, in which the Christmas card, book, calendar, and picture departments were singled out, the Chairman referred to the Postmaster-General's proposed increase in the postage of picture postcards to 1½d, holding that, in the interests both of the public and of the trade, this prohibitive rate would be deplorable. He contended that it would have the exactly opposite effect to that intended for it by the Chancellor of the Exchequer, and that, instead of the expected increase of one million in the revenue, reduced sales would lead to considerable loss. The French Postal Department, Sir Adolph pointed out, took the opposite view to that of the British authorities, and had proposed to the International Postal Congress to be held in Madrid in October next, with whom the ultimate decision rested, to charge a lower rate of postage for the picture postcard against the ordinary correspondence postcard. If, however, this common-sense proposition were successfully opposed by the British postal authorities, the suggestion of the Postmaster-General would probably be acted upon by the public and the penny postage rate thus be secured after all. They would only have to cross out the heading "Tuck's Postcard" and write in its place the words "Printed matter." On the other hand, seeing that the revenue had nothing to gain by the adoption of this red-tape procedure, the only practical effect of which was that it discarded all sentiment and extinguished the popular designation of "picture postcard," it was to be hoped that the simple and practical proposal of the French postal authorities might finally be accepted.

THE DIVIDEND.

Coming to the balance-sheet, the Chairman pointed out that the profits of the year had reached another record figure, the net total, after providing for bad and doubtful debts, depreciation, and directors' remuneration, being £62,954. The directors recommended the payment of a final dividend on the ordinary shares for six months to April 30, 1920, at the rate of 15 per cent. per annum, making, with the interim dividend paid, a dividend for the year of 12½ per cent., and they proposed to transfer to special dividend reserve £10,000 and to general reserve £5,000. He was glad to be able to state that the outlook for the current year was most promising, the sales being considerably in advance of those for the same period of last year. The business of Raphael Tuck and Sons was world-wide, and, supplying as they did a fair proportion of the art needs of practically all the civilised globe, the comprehensive title, "For an Art League of Nations," which they had selected this year, and which they had given to their complete collection of new publications, would be found at once apt and explanatory of their ideals.

In this connection he could not do better than read a few introductory sentences contained in the company's announcement for the coming season:—"For upwards of half a century each recurring year has witnessed the advent of a new collection of our manifold art productions for the use of the public at home and overseas, and these have been ever welcomed and have acclimatised themselves in every part of the habitable globe. This labour of love in the field of art, carried on by us without haste and without rest during all these years, has in the course of time brought us into direct contact with the people of all nations. It has told us of their wants, it has enabled us to study their requirements, to measure their tastes, and imperceptibly but surely to blend these with our own British art ideals, and thus gradually to sow the seeds for a veritable 'Art League of the Nations of the Earth.'"

The motion was carried unanimously, and the usual formal business terminated the proceedings.

BISICHI TIN COMPANY (NIGERIA), LIMITED.

INFLUENCE OF LABOUR ON OUTPUT.

The ninth annual general meeting of the Bisichi Tin Company (Nigeria), Limited, was held, on the 11th inst., at the Cannon street Hotel, London, Mr James Gardiner (chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts, said that the result of the year's work, in view of the reduced output, compared favourably with the figures of the previous year, thanks to the higher scale of prices of which the company had had the advantage. The output was down nearly 27 per cent., but the reduction in net profit was only about 17 per cent. The chief factor in the reduced production was the difficulty in procuring labour, the extra charges entailed thereby accounting for an advance in the all-in cost from £129 per ton to £151 per ton. He hoped that through the Council of the Chamber of Mines some working arrangement might be secured, otherwise existing difficulties might continue for some time. Given a fair supply of labour it would be possible materially to increase the company's output, and to reduce working costs. Transport had also left much to be desired. It was hoped that some alleviation of those difficulties would also be obtained. The scarcity of labour had a direct bearing on prospecting, and the examination of a considerable portion of their old leases had to be held in abeyance. As to reserves, however, the estimates given by the company's engineers showed that they had proved ground ready to work representing something like ten years at an output of 250 tons a

year, so there was no fear as to the future in that respect. At the same time, the nature of the deposits generally in Northern Nigeria was such that figures could not be taken as other than approximate. Another point was the violent fluctuation in the price of the metal, so that it was futile to give any exact figures.

On the area held in joint account with Forum, very fair prospects had been obtained, and the completion of prospecting would enable them to determine the best method of exploitation. The company was also jointly interested with the Northern Nigeria Trust in another exploration venture which so far had shown satisfactory results. As to their own operations for the current year, owing to certain changes, figures of returns would show a lower output than usual, but that would be but a temporary phase, and, given anything like normal times, they might view the future with every confidence. It became more clear to all of them that the old method of calabashing must be continued as much as possible where mechanical means could be economically adopted. One further point was that it should be a great satisfaction to them all that in opening up their new areas they had sufficient cash for the necessary expenditure.

Mr Wm. Graham seconded the motion, and it was carried unanimously.

THE MOLASSINE COMPANY, LIMITED.

SATISFACTORY YEAR'S BUSINESS.

The annual general meeting of the Molassine Company, Limited, was held, on the 10th instant, at Tunnel avenue, Greenwich, Mr John Prosser (chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts, said he must express the pleasure and satisfaction of the directors at being able to recommend, in addition to the current year's dividend on the preference shares, a dividend of 10 per cent. on the ordinary shares. With regard to the accounts, there was not much to remark upon. They had reduced the debenture stock by £3,600.

On the debit side, the various items remained at about the same except for sundry creditors, which were £96,484, against £40,311. This was accounted for by the increased price of raw materials at the latter end of the season and the necessity for carrying large stocks. The profits for the year showed an increase over the previous year of £1,160. On the credit side of the balance-sheet the purchase of business account remained the same. New trade-marks, patents, copyrights, &c., had been written down from £2,375 to £1,937. Leasehold property had also been written down from £33,168 to £31,972. Plant, machinery, &c., had gone up from £34,932 to £36,092. It was generally necessary to be always adding to plant and machinery. Cash at bankers was less by £13,498 than last year, showing the necessity for increasing their cash reserves, and also the difficulties of trading to-day with practically a pre-war capital when the cost of all raw materials was enhanced four times. Sundry debtors were £100,656, as against £52,434 last year, the increase being the result of advance in price of raw materials towards the end of the season and of a larger turnover towards the end of the year. This item was absolutely good, their bad debts at all times being exceptionally small. Freehold poultry farm and equipment and payment on account of lands purchases stood at £12,590, compared with £8,574.

The total profit for the year was £23,423, which, with £5,968 brought forward from last year, made a total of £29,391 18s 1d. Of this the directors had replaced £6,000 to the capital reserve fund, being the amount taken therefrom, in addition to £15,000 taken from the general reserve fund, for the purpose of capitalising the unpaid preference dividend. They had also placed £8,000 to the general reserve, leaving £15,391. Of this amount £7,000 would be required to pay one year's dividend on the preference shares, and it was proposed to pay 10 per cent. on the ordinary shares and to carry forward £891.

The report was unanimously adopted.

ARGENTINE IRON AND STEEL COMPANY, LIMITED.

SATISFACTORY PROFITS—THE QUESTION OF FOREIGN INVESTORS.

The eighth ordinary general meeting of the Argentine Iron and Steel Company (Pedro Vasena e Hijos), Limited, was held, on the 12th instant, at Winchester House, Old Broad street, London, Baron Emile B. d'Erlanger presiding.

The notice of the meeting was taken as read.

The Chairman having spoken with deep regret of the resignation of their chairman, Mr Charles Lock, proceeded to deal with the accounts. He remarked that the debenture debt which once stood at £350,000 was now reduced to £257,000. The company's works and factory had never been in a more efficient condition, and its value was far greater than it had ever been in the history of the company. The reserve account stood at £157,000, £50,000 having been added during the year. That amount was considerably in excess of the item of goodwill. Their fixed assets of land, buildings, machinery, &c., stood at £692,000, which was £100,000 in excess of last year. The increase was to a large extent represented by the open hearth furnace and rolling mill which had been installed. Stock in hand stood at £261,000, against £212,000 last year, and considering the prices ruling for steel and iron goods was but a small stock to hold. The debentures were £460,000, but in consideration of the fact that their turnover was about £2,500,000, it would be realised that the amount owing really corresponded to about three months' credit to their customers. The trading profit amounted to £156,000, which was the largest realised in the history of the company. They were paying 7 per cent. on the preference shares and 4 per cent. on the ordinary shares. According to advices recently received, their turnover for the first four months of the present year had been most satisfactory, being over £250,000 a month. The profits they were making could not be considered war profits. Having referred to the valuable services rendered by Mr Alfredo Vasena, whom they had appointed managing director, the Chairman said there was one matter of general interest with which he wished to deal. Foreigners who previous to the war had sold their businesses to an English company, and had accepted a large amount of the purchase price in ordinary shares, felt a very deep sense of grievance at the present moment at the heavy taxation which English companies had to bear. It seemed unfair that people who had sold their businesses to English companies should be liable to so heavy a taxation as 30 per cent. for income-tax as well as for excess profits duty, which fell almost entirely on the ordinary shareholders for the privilege of remaining an English company. He was sorry to say that perfect harmony did not reign amongst the Vasena family in the Argentine, and there was a section which would like to be represented on the board of this company. He would be only too pleased to welcome a member of the Vasena family. He moved the adoption of the report.

Mr J. C. Gibson seconded the resolution.

Mr Frederico (representing a section of the Vasena family) said that there was no quarrel, but they desired the board to favourably consider their being represented on the board.

The resolution was carried unanimously, and the usual formal business was then transacted.

SPENCER, TURNER, AND BOLDERO, LIMITED.

REORGANISATION OF THE CAPITAL APPROVED.

A series of meetings of the shareholders in Spencer, Turner, and Boldero, Limited, were held, on the 12th inst., at the offices, 18 Duke street, Lisson grove, London, for the purpose of submitting resolutions providing for the reorganisation of the capital of the company. The proposals were to sub-divide the present £5 preference and ordinary shares into £1 shares, to increase the preference capital from £150,000 to £180,000, and the ordinary capital from £300,000 to £570,000; to capitalise £90,000 of the reserve funds and distribute the same among the shareholders by issuing as fully paid the 30,000 new £1 preference shares to the preference shareholders, and 60,000 of the new £1 ordinary shares to the ordinary shareholders in proportion to their present holdings, namely, one £1 fully paid share in the case of each class for every £5 of capital now held; and to increase the cumulative dividend on the preference shares from 5 per cent. to 6 per cent., and, as consideration for this increase and for the share in the proposed distribution, to limit their rights in a winding-up to repayment of their capital in priority to the ordinary shares.

Presiding at the meeting of preference shareholders, Mr H. J. Turner said the directors considered it would be more in accordance with the present methods of capitalisation to convert the existing £5 shares into £1 shares, and that £90,000 of the large reserve funds should be capitalised and distributed among the shareholders. Having regard to the increase in the business and the consequent necessity of carrying a larger stock it was desirable that the working capital of the company should be increased forthwith to the extent of £108,000, and that provision should be made for a further increase of £102,000 if required. With the addition of the bonus shares about to be distributed, and the raising of the dividend from 5 per cent. to 6 per cent., the original holdings would now show a dividend of over 7 per cent., and if the preference shareholders availed themselves of the opportunity which they would have in conjunction with the ordinary shareholders to subscribe for their quota of ordinary shares at par they would be the possessors of a holding which should be in all ways a satisfactory one.

The scheme was unanimously approved at each meeting.

R. G. JAQUET, Accountant-General.

India Office, August 11, 1920.

Messrs Samuel Montagu and Co. write as follows on August 12th :—"Gold: The Bank of England gold reserve against its note issue is £121,530,460, merely £1,000 more than that of last week. A fair amount of gold came into the market and was taken for India and New York. The high price now being paid for gold in the Indian bazaars is worthy of notice, in view of the announcement that an Order in Council will be passed in September to make the sovereign legal tender for only 10 rupees instead of 15 as heretofore. The present market quotation of Rs 22 8a per fine tola of gold represents a premium of over 41 per cent. above the future

currency value of the metal, and indicates a luxury demand of exceptional vitality. Meanwhile, the sovereign is in the remarkable position of possessing no legal tender value, although the gold mohur of equal weight and fineness is still legal tender for 15 rupees. The keen demand on the part of India for the precious metals is not a bull point for the Indian exchange, nor is the recent official intimation at Karachi that it is unlikely that the Government will see its way to issue any licences this year for the export of wheat. Silver: The price of silver rose this week in sympathy with a fall in the American exchange, and reacted slightly as exchange hardened. The Indian demand has of late somewhat diminished. The last mail advices from that quarter state that a fair up-country demand was then felt. Subsequently purchases from this market have not been so advantageous owing to the recession of the Indian exchange from the 2s figure to which it had approximated. China has been chary of buying, deterred no doubt by the scantiness of exports and higher prices for silver. On the other hand, America has been prevented from making use of the high quotations here by the downward tendency of exchange. Operations also may have been affected by anticipation of some falling off of supplies from Mexico. Imports from that country into the U.S.A. during the month of June amounted to four million ounces. We have been informed by mail from New York that the Mexican Government is purchasing the product of Mexican silver mines to the extent of one to two million ounces a month at a premium of about 4 cents over the New York official quotation for foreign bullion. Continental selling has not been so much in evidence, possibly owing to uncertainty as to the European political situation. As a consequence, the market has been inclined to be quiet, and there has only been just sufficient silver to satisfy the moderate demand.

INDIAN CURRENCY RETURNS.
(In Lacs of Rupees.)

Burma Ruby	..	70,000 loads washed produced rubies valued at Rs45,000; royalties, Rs15,000. Two sluices started Aug. 1st.
Fremantle Trading	461	Mines shut down owing to strike.
Grenville United	21,3/20	Minerals at average price, £160 3s 3d per ton; value, £3,387 2s.
Hampden Cloncurry	..	For July the smelter treated 8,480 tons of ore, yielding 581 tons of copper, 342 ozs of gold, and 3,309 ozs of silver. This includes 30 tons of copper from Customs ore.
NewVaalRiv.Diamnd	Tons ..	Diamonds registered 990 carats, valued at £11,195 (5 selling days).
Oroville Dredging	..	Gross returns for 10 days to July 26th, $37,018 fro n 82,322 cubic yards. Pato : Gross returns for 9 days to July 19th £23,574 from 33,777 cubic yards.
Rhodesia Broken Hill	1,283	858 tons lead sold and delivered in July at average price of £34 5s 10d.
Senora Mexican	..	10,000 ozs fine silver ; tailings and dump ore treated, 1,750 tons.

Reports and Notices.

The registered offices of the Oilfields of Egypt, Limited, have been removed to 145 Dashwood House, New Broad street, E.C. 2, and Messrs F. W. Bishop, F.C.I.S., and James Rennie, A.C.I.S., will act as managing secretaries.

Sir William Thom, K.B.E., of Messrs Yates and Thom, Limited, Blackburn, has been elected a director of the Iron Trades' Employers' Insurance Association, Limited.

Cox's Shipping Agency, Limited, announce they have opened a branch office at 1 Adelaide street, Swansea, under the management of Mr W. T. M. Hughes, who was for many years the manager of the export department of Messrs Stockwood, Rees, and Co., Swansea.

Mr Austin Low (Messrs Grindlay and Co.) has been appointed a director of the London Assurance Corporation.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Weather conditions, though still somewhat unsettled, show signs of improvement, longer intervals of sunshine with a warmer temperature tend to hasten cereal crops to maturity, while farmers are now busy with harvest operations, also in securing the balance of the hay crop. Estimates of the wheat crop are now below the average, adverse weather of the past month discounting favourable prospects previously entertained. No samples of the new crop have yet been marketed, threshings being delayed by inclement weather. Imported descriptions, however, were in fair supply, and absorbed at regulation prices. Crop reports generally are satisfactory from the principal exporting countries. Although the United States winter wheat yield has been increased, the estimate of spring sowings have been reduced owing to rust, while the combined crops are expected to yield some 798 million bushels. Estimates of the Canadian crop vary, but are mostly favourable, and indicate a bountiful crop with harvest operations now in progress. In Argentina the general condition of crops has improved, but it appears that more moisture is needed. Australian crop prospects are maintained, and latest estimates point to a surplus probably exceeding 10 million qrs. The position in India remains satisfactory, though more rain is needed in some parts. Official reports from Bulgaria estimate a surplus of all cereals at six million qrs, the outturn being 30 per cent. over last year. On the near Continent harvesting is interrupted by adverse weather, but the yield is expected to be greater than last year. Flour : English G.R. grade in moderate request at 63s 6d per sack, ex mill, but offerings of imported are readily taken up at 65s 9d per 280 lbs, ex store. Only small shipments from North America took place, while mostly on Continental account. Maize ruled firmer during the early part of the week, assisted by a better consumptive demand and stimulating advices from the Argentine, but later a quieter tone set in and the advance was partially lost, though a good deal of irregularity was noticeable at times. Plate, ex ship, quoted 66s, ditto, landed, 68s 6d. In the forward market several cargoes of Plate changed hands at 62s up to 67s 6d, according to position, ditto new crop, September loading, 64s to 64s 6d, and a small steamer of ditto (bags), afloat, 67s 6d, Dan-Gal-Fox-Bessarabian, expected loading, 67s 6d. Parcels of ditto were dealt in, afloat, 65s 6d, August September 63s 9d, 62s 6d, 61s 6d, and 62s 6d, September-October 63s, 62s 3d, 63s, and 61s 9d. A steamer cargo Galatz-Foxanian, August-September, offers at 69s 6d per 480 lbs. Barley ruled firm, while reservedly offered. Californian, ex ship, quoted at 105s per 448 lbs. American malting, landed, 82s 6d, No. 4 Canada Western, ex ship, 74s, and Morocco 78s, landed, per 400 lbs. Forward sales included cargo Danube-Bessarabian, early September loading, at 67s 3d. Parcels of No. 1 Californian, prompt, 95s per 448 lbs, No. 4 Canada Western, August, 71s to 71s 3d, August-September 70s 9d-70s 6d, September-October 68s 6d per 400 lbs. Oats eased after being firmer, though offers on the spot are by no means freely made. English quoted up to 80s, Scottish to 82s; Plate, landed, 66s per qr. On c.i.f. terms sales included Plate f.a.q., afloat, at 51s 6d, July-August 49s 6d to 46s 0d, August-September, 48s 3d, 45s 9d to 46s 3d per 320 lbs. Rye : English quoted 86s to 90s on rail per 504 lbs. Beans dull. English spring 100s to 105s, new winter 87s 6d per 532 lbs. Chinese horse £17 ton, ex store. Peas steady. English blues 105s to 125s, Maples 120s to 140s per 504 lbs. Japanese green peas, July-August shipment, sold £27 15s per ton c.i.f. Oatmeal : Scottish £40 to £44, and American £34 to £36 per ton, ex store. Lentils : Best split 36s per 100 lbs. Only moderate activity was displayed with regard to grain charters, freight markets being generally quiet and rates on the easy side. From the River Plate 85s was done Rosario to United Kingdom maize, September, and 75s lower ports, while clipped oats paid 85s, and unclipped ditto 95s per ton home. Montreal to United Kingdom, September, stands at about 11s 6d, Northern Range American ports 11s, and Gulf paid 12s 3d per qr United Kingdom,

* Half-year. † Free of tax.

with proportionate increases to Continent, Baltic ports, and West Italy. India dull, and rates nominally 60s on dead weight basis. Australia paid 135s for wheat home, while tonnage is wanted for flour cargoes from Shanghai. From the Danube 47s 6d is quoted to West Italy. Time charter inactive, though 16s 6d is indicated for a steamer of handy size for six months' trading.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1919-20, contrasted with 1918-19, 1917-18, and 1916-17.—(Particulars of imports of wheat and flour temporarily discontinued):—

THE IRON AND COAL TRADES.

Our Middlesbro' correspondent's report, dated August 12th, is as follows:—Pig-iron: The Cleveland pig-iron market is very quiet owing to holidays, and there is practically no new business being transacted. As the local steel works will be closed during next week, it will give pig-iron makers a chance of accumulating

ASSAY DEPARTMENT—Gold, etc. and all Mineral Ores assayed and realised.
EXECUTOR and TRUSTEE business undertaken.
The Officers of the Bank are bound not to disclose the transactions of its customers.

some stocks. There is still, however, no iron available for shipment in appreciable quantities. Prices are unchanged at 217s 6d per ton for No. 3 and No. 4 Cleveland foundry pig iron, and 260s per ton for mixed numbers East Coast hematite, for home consumption. Manufactured iron and steel: Local works will be closed next week, when necessary repairs will be executed. Meantime prices are unchanged. Steel ship plates, home, £23 10s; steel ship angles, £23; iron ship angles, £30 15s; iron bars, £30; steel rails, £23 net. Iron ore: Buyers are still holding off the market and recent transactions are limited to odd cargoes. Whilst sellers are generally quoting 49s for best Bilbao Rubio on a parity freight basis of 17s, there are isolated transactions at something below this figure.

Our Sheffield correspondent writes:—Conditions throughout the steel industry continue quiet, and no revival of buying is expected until after the end of month. Expectations of lower prices have been disappointed, except in a few classes of steel, as costs of production are still going up in spite of improved organisation designed to economise time and labour. The new railway rates which come into force next month will add six or seven shillings per ton to the cost of finished iron and steel. The local steel workers are demanding an advance of 35 per cent. on their wages, and as the demand has been conceded in other centres, it is expected that the men will get what they are out for. There is no excessive production of mild steel in this district, and all the mills are in arrears with deliveries. New bookings, however, have been meagre in the extreme since Whitsuntide. The competition of America and Belgium has become a factor in the situation, especially in overseas markets which the British manufacturers have been unable to supply. The inadequate output of the blast furnaces ensures the maintenance of the strength of the iron market, and prices of pig are at a premium. European countries are wanting all the basic and foundry pig which they can get. The depression in all classes of crucible steel is somewhat serious, as the material is expensive and profitable. Short-time working is the rule in this important branch of trade. A few American orders continue to be booked, but very little is coming forward from the other overseas markets. There is surplus production of several classes of engineers' small tools, and an abnormally heavy demand for others. The coal market is settling down to normal conditions, but supplies are not being absorbed as freely as before the holidays. Small fuels are less plentiful. Although a certain tonnage of half-inch slack has been authorised for export, no business has been arranged, as colliers will not book orders until they know exactly what quality they will be allowed to ship. There is a strong inquiry for house coal, many householders placing orders for stocking. Prices current per ton at pits are:—Best South Yorkshire hards, 33s 2d to 33s 8d; ditto Derbyshire, 32s 8d to 33s 2d; best Tyne steams, 150s; steam cobbles and nuts, 31s 8d to 32s 2d; washed smalls, 28s 8d to 30s 2d; small slacks, 23s 2d to 24s 2d; branch, 37s 2d to 37s 8d; best Silkstones, 33s 8d to 34s 8d.

Our Glasgow correspondent (writing on Thursday) says:—Business in iron and steel has again been active this week, but things are not moving as smoothly as those concerned desire. Demand for most descriptions of manufactured and semi-manufactured material is as strong as it has been at any time for months, but production lags behind, and yet it in all respects continues on a very heavy scale, with the consequence that here and there constructive operations are hindered, so much so that in quite a number of connections hands have been discharged. This particularly in engineering shops. Rolling mills at the steel works are mainly engaged running off plates and angles, which go into shipbuilding, boiler making, and bridge building, while the lighter sections get less attention. The inquiry for Scotch pig-iron is far ahead of outputs, and makers are not disposed to sell for shipment unless in the smallest lots, and then to only years' old customers. Prices are unchanged at 280s to 285s for No. 1, and 270s to 275s for No. 3. Hematite is hard at 285s 5d—all f.o.t. consumers' works. A very large turnover proceeds in steel and iron bars, makers of which have big order books, and are treating with indifference the statement that Belgium is offering steel bars here at £7 a ton under local terms, which run from £31 to £35 per ton. Angles are called round £29 to £30, and boiler plates £36 per ton export, £30 10s for home. Black sheet production still fails to keep pace with requirements, so that values are easily maintained at from £38 10s to £44, and galvanised sheets at £55, f.o.t. Glasgow. Tubes are in eager request for home and export markets, while the former is picking up freely everything available in castings, forgings, spikes, nails, rivets, in short, all items requisite to structural operations. Supplies of coal are not equal to home industrial needs, and some anxiety is experienced at the proposal of the Scotch miners to reduce their working week to three days—until the wages increase question, now on the tapis, is settled.

VICTORY BONDS

purchased now will not be available for the payment of Death Duties for their full face value until six months have elapsed. The

MANCHESTER, August 12.

We have experienced a rather unsettled market during the week, and the conditions have not been favourable to active operations. Many ups and downs have occurred in raw cotton rates, and the European political situation and the financial outlook have caused nervousness. Some shippers of cloth to India have bought miscellaneous fabrics on a fair scale, the bulk of the business being in bleaching and printing styles. Needy sellers have accepted poor prices. Standard grey makes remain dull. There has been very little demand of any kind for China. A little more business has been offering for certain European and Near Eastern outlets, and operations for South America have not been at a standstill, but the total sales have not been important. The trade being done at the moment is not sufficient to improve the general position of manufacturers. American yarns have been purchased quietly, and twists have been firmer in quotation than wefts. Tentative bids have been mentioned in bundles for India, but not much has been done. Scattered sales have been put through in Egyptian spinnings.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—While it cannot be said that there is any general activity in the wool textile industry at the moment, there are indications that a little more business is being done than has been the case for some weeks past. The general impression appears to be that the prices of tops have touched the lowest point, and quotations are rather firmer. The very cheap lots which have been on the market for some time have now been cleared, and although there is not very much buying forward, there is enough trade to keep the market steady. The price of South American crossbreds has advanced about 2d per clean lb during the past week, but there is still a wide disparity between the prices of B.A. wools and Colonial crossbreds. Good average 64's tops may still be bought at about 7s 6d per lb, but some topmakers are wanting more money. Some spinners report rather more activity, and some fair weights of yarn have recently been booked. Yarn prices, however, remain very irregular, and there are big differences in quotations. Manufacturers continue to be fairly well employed on old orders, but there is very little new business in pieces, and some firms are now working to stock. In English wools there is a steady trade in Downs and good half-breds at recent rates, but most other sorts are neglected. The outlook as regards the labour position is brighter, and there appears to be every prospect of the employees accepting the latest wages offer made by the employers through the Industrial Council.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

Some very important statistics have been issued during the past week by the Ministry of Munitions relating to the stocks of raw material at home, in America, Belgium, Australia, and New Zealand. The particulars show that on June 30th last, when the control of Colonial wool ceased in the Colonies, the quantity of merino combing wool in stock was 796,579 bales; merino clothing, 190,780; merino carbonising, 125,897; New Zealand crossbred slipes, 135,187; New Zealand crossbred scoured, 157,332; crossbred carbonising, 192,635; crossbred 56's-60's, 500,296; crossbred 44's-50's, 534,506; crossbred 35's-40's, 272,342. The total of Australian wool was 2,049,177 and New Zealand 856,377, making a grand total of 2,905,554 bales. The trade seems to have been somewhat surprised at the big stock of wool on hand last June 30th, but it should have been apparent to everyone that all round one and a half years' Australasian clips would be carried over by the Imperial Government. There is little cause for surprise at the amount of merino wool which remained on hand last June 30th, but the quantity of cross-bred wool remaining unsold was remarkable, there being no less than 856,377 bales of New Zealand crossbreds, or more than one and a half year's clip. In addition to the total weight of Coloniel wools, it is known that considerable old stocks existed in South America and South Africa, while new clips are also available in the United States and Great Britain. In addition, shearing will now be general in Australia, hence the manufacturing world is faced with colossal supplies of raw material. There can be no shortage, but more than sufficient to meet all prospective requirements, even if Central and Eastern Europe had to come into the market in full strength.

Last Monday another useful set of figures was published by Sir Arthur Goldfinch, setting forth the actual quantities of Colonial wool sold since November, 1918, and up to June 30th last, no less than 3,000,000 bales being disposed of. This also is a huge total, showing clearly the great consumptive capacity of the trade. There is no doubt that during the past 18 months the manufacture of pure wool fabrics has increased, and it is satisfactory that such big quantities of good fabrics have been put upon the markets of the world. It is to be hoped that fewer wool adulterants will be used in the future, for to-day raw wool is in many cases cheaper than such substitutes as mungo and stockings.

The publication of the statement that 77,786 bales of Government owned wool was allocated to the trade between December 1st and June 30th caused some surprise in the trade, and drew forth remarks of a somewhat critical character. The occasion of the latter was the fact that it was understood that after November 30th the only means for the disposal of Government owned wool were the ordinary auction sales and sales of withdrawn wool through the brokers, the impression apparently having been created that the quantity of wool named above had been bought privately since November 30th. The facts are that this wool was actually allocated before June 30th, but topmakers and spinners were not allowed to take delivery because they were expected to deal first with Government matchings. Great credit is due to the Government officials for handling the wool business so satisfactorily during the past 18 months, and what is now needed is a wider market to absorb the present and prospective large stocks.

OILSEEDS AND VEGETABLE OILS.

(FROM OUR CORRESPONDENT.)

The trade in linseed oil continues on steady lines with a fair consumptive demand. Values have further appreciated, helped by small offerings and the firmness in the market for seed. Up to £78 10s has been paid at Hull for spot and month, followed by a rather easier tendency. The September-December position has shown some improvement, but actual business is limited. Rather more activity is reported in linseed, as much as £36 being paid for spot Plate urgently required, and a fairly subsantial trade done at £34 for shipment. Crushers are turning their attention to the Indian crop small grain, Bombay having been bought this week for September-October shipment at £37 10s, and Calcutta at £38 5s.

Cotton oils are firm all round, scarcity of all descriptions being accompanied by a strong demand for delivery to the end of September. Values have advanced £1 to £2 per ton. Egyptian cottonseed declined to about £17 for spot and shipment, but in view of the large surplus of the old crop unshipped at Alexandria buyers are proceeding slowly. In addition to the deodorised cotton oil most edible oils are in good demand and prices firm.

The large stocks of oil cakes which have accumulated at the mills are beginning to move off, wholesalers and large consumers showing an inclination to take advantage of the present reasonable prices. Production at the moment is on the light side, comparatively little crushing being done. The outlook in the oilseed trade is not very promising for the early autumn, and it seems possible that the quiet season may be prolonged later than usual.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The hide market is recovering from the slump, and at Thursday's Bermondsey sales advances of ½d to 1d per lb were made on many classes of ox and heifer hides. Best ox made 11½d to 12⅛d, and cows 9d to 9½d. Calf were weaker, and prices dropped ⅛d to ¾d per lb. Lambs were also weak, and declined 3d to 15d per skin, pelts also dropping 5d to 6d each.

The tone of the foreign hide market is also better, and shows confidence is being slowly restored. Fair-sized transactions in Frigorific hides are reported on a basis of $46 to $52. In common sorts there is little doing, the market being inactive. Chicago cables describe the market as weak, with 28 cents being paid for best heavy packers and 28 cents for Bogota drys.

Although little in the way of big business is reported, the tone of the leather market is better, and quite a fair demand has been noted from the repairers' section. Tanners are not reducing the price of best grades of sole bends and butts, but holders of the cheaper grades from dry hides are selling at reduced prices. Offal is also a weak market, and bellies are being offered at prices which can show no profit on tanning, in view of the cost of hides from which they were cut.

The state of the upper leather market leaves much to be desired, and curriers and dressers are holding much more stock than they like. Imports again are heavy, the value of imported stock from January to end of July amounting to the big figure of £9,283,062. Germany is again sending dressed leather here, the value of German patent alone for the period mentioned being £207,174, and other sorts £338,467.

The boot trade is stagnant, although a fairly large order for military boots of a low grade is reported as being received from Eastern Europe. Exports of boots and shoes for the first seven months of 1920 were valued at £4,072,584, as against £2,021,451 for same period of last year.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, August 13.

The various markets throughout the period under review produced no new noteworthy feature, moderate buying being in force, and though in some cases slight irregularity predominated, prices on balance were not materially altered. Financial considerations would seem to weigh, and this accommodation not being easily forthcoming, leads to reduced operations in forward positions, especially when the commodity is at a high level of prices. Copra and palm kernels, &c., came in for reduced support after the activity recently shown, and irregularity and weakness governed price movements.

SUGAR.—Only a small amount of business transpired in free parcels at easy rates, including crystallised West India at 120s to 125s as to quality. White Mauritius, 138s to 137s, and American granulated 140s Liquid glucose sold, 57s 6d. American syrup neglected, and rates somewhat nominal. Honey steady, though only retail sales were effected.

THE BANK OF TAIWAN, LIMITED.

Incorporated by the Special Charter of the Imperial Japanese Government, 1899.

Capital Subscribed	**Y60,000,000**
Capital Paid Up	**Y45,000,000**
Reserve	**Y8,810,000**

Head Office - - TAIPEH, FORMOSA.
London Office - - 58 OLD BROAD ST., E.C.2

BRANCHES: Amoy, Batavia, Bangkok, Bombay, Canton, Foochow, Hankow, Hongkong, Kiukiang, Keelung, Kobe, Moji, New York, Osaka, Semarang, Shanghai, Singapore, Soerabaya, Swatow, Tainan, Tokyo, Yokohama, &c., &c., and Correspondents in every principal town in the World.

Special facilities are available for Exchange Business on Japan, China, India, Straits Settlements, Dutch East Indies and France, where the Bank has special working arrangements with Cox & Co. (France) Ltd. Deposits are received for fixed periods on terms which may be ascertained on application.

COFFEE.—Moderate supplies were submitted to auction this week, and with a sustained demand for all the finer lots suitable to home-trade buyers these brought full to dearer rates. Export descriptions still hang fire. The terminal market though steady remained quiet. December sold, 72s.

COCOA dull, and rates nominal with regard to spot lots, but, for arrival, new crop West Coast African, November-January, sold, 69s, ex quay, Liverpool.

TEA.—During the week 41,500 packages Indian and 41,000 packages Ceylon were catalogued in auction, and while all good to fine samples met a ready trade at a full range of values low medium and common sold slowly.

RICE steady, with moderate export inquiries. Bran steadily held, but quiet. September-October, Rangoon, sold, £12, ex quay, London.

SPICE.—Pepper steady, but white engaged chief attention. Fair black Singapore, spot, sold, 6½d; August-October, steamer, 6⅜d to 6¼d; Aleppy, spot, 7d; Tellicherry, ditto, 7¾d; white Singapore, spot, sold, 1s to 1s 0¼d; Muntok, 1s 0⅜d; ditto, September-November, steamer, 1s 0¼d. Cloves steady, and fair Zanzibar, spot, 1s 6d to 1s 7d; October-December delivery, 1s 6d to 1s 5d. Pimento, 4d. Ginger steady, but trade slow. Tapioca firm, and fair flake, spot, sold, 2½d; ditto, August-October, steamer, 23s 6d to London and 24s 6d to Marseilles; fair Penang seed, spot, sold, 26s; small sago, spot, fair, 33s; sago flour sold, August-October, 22s; farina, spot, 33s. Desiccated coconut firmer, with a good demand, both on home and export account. Fine cut, spot, sold, 75s; and medium, 87s 6d.

JUTE.—Quite a good volume of business this week, chiefly in old crop, owing to its relative cheapness, new ruling steady, quiet. Calcutta cables recorded small arrivals from up country and lack of steeping water. Native firsts assortment, spot, Dundee, sold, £46 to £49, as to quality; Daisee No. 2, £46 to £48, with superior parcels £50 to £51; native first marks assortment, spot, Hamburg, £52; Dundee, lightnings, at £37 10s; and ditto, spot, Hamburg, £45. New crop firsts, actuals, August-September, quoted £50.

HEMP.—Manila market dull, and prices largely nominal. There was no pressure to sell however. J grade, August-October, buyers, £63; K value, £54; and L, £53. New Zealand inactive, and market purly nominal.

SHELLAC.—Market firmer this week, with few offers from Calcutta. Fair T.N., spot, sold, 675s to 680s; August, 650s; and October up to 600s, 605s, 580s.

COPRA.—Market quieter, and rates easier on the week. F.M.S. Straits, August-October, London, sold, £56 to £55; September-November, £55 15s to £55 10s. South Sea Islands, August-September, London, £54. F.M. Straits, August-October, to Marseilles, £53 10s. Palm kernels dull. August-October sold, £36 10s.

EGG PRODUCTS firm, with a fair demand. Liquid yolk, August-October, sold, 112s 6d to 110s and 105s per cwt. Albumen, spot, done, 5s; ditto, August-October, 5s to 4s 9d per lb.

MENTHOL.—Spot, Kob.-Suz., sold, 35s. Peppermint oil, 8s 9d; aniseed, 4s 3d; slab camphor, 6s 9d per lb. Japan wax, spot, 110s per cwt.

RUBBER.—The market opened the week quietly, but became steadier. Plantation crepe, spot, sold, 1s 9⅜d to 1s 10¼d; September, 1s 10½d to 1s 11d; October-December, 1s 11¼d to 2s; January-June, 2s 1½d to 2s 2d. Ribbed smoked sheet, spot, sold, 1s 8¾d to 1s 9d; October-December, 1s 10d to 1s 10⅛d. Fine hard Para, spot, sellers, 1s 9⅛d.

OILS.—Linseed firmer. Spot, net, naked, 81s; August, 79s 6d; September-December, 77s 9d. Rape quiet. Crude, spot, 70s; refined 80s. Cotton dearer. Crude Egyptian, 68s; Bombay, 58s; refined edible, 87s. China wood firm. Hankow, spot (barrels), sold, 108s; July-August, 100s; and Hong Kong, spot, 104s. Palm kernel firm. Crushed, spot, 77s; extracted, 76s. Palm firm. Softs, July-August, 65s; Lagos, 67s. Coconut dearer. Ceylon, spot, sold 88s; August-October, 86s; Cochin, ditto, 96s. Soya firmer. Oriental, afloat, 73s; August-October, 76s; deodorised, 91s. Japan fish firm. July-August (cases), 45s. Cod liver steady. English, spot, sold, 50s. Ground nut firm. English crushed, naked, spot, 80s; deodorised (barrels), 97s. Turpentine easier. American, spot, 144s; August, 141s. September-December, 141s 6d. Rosin slow. American, grade B, 45s; F, 56s; G, 56s; K, 57s; M, 57s 6d; WW, 59s; French, F/G, 53s;

GIRARD TRUST COMPANY

H, 53s; WW, 54s; extra pale, 55s. Petroleum steady, quiet; American, spot, 2s 1¾d; and water white, 2s 2¾d per gallon.

OILSEEDS.—Linseed market firm. Calcutta afloat sold, £38 5s; August-September sold, £38 5s; Bombay, September-October, £39: Plate afloat, Hull, sold, £34 15s; August-September, £34 10s. Rapeseed steady. Toria, August-September, Hull, sold, £33 5s to £33; real bold Ferozepore, £32; brown Cawnpore, £31. Cottonseed firmer. London Egyptian f.a.q., spot, sold, £17 10s to £18 5s; September-October, £17 5s to £18 5s; Bombay, spot, old, Hull, £12; ditto, new, £13; August-September, £13 5s. Castor seed inactive. Bombay, July-August, Hull, sellers, £28. Gingelly firmer. Chinese, afloat, to Continent, sellers, £46. Groundnuts firmer. Chinese, dry decorticated, July-August, £37 10s per ton.

METALS.—Tin continued an irregular market from time to time, with dealings on a moderate scale during the past week. Opening easier last Monday, cash registered £282 10s to £279 10s; middle of October £248 10s, and three months', £288 to £285 10s. The cash position remained unchanged on the following day, forward dates being rather firmer, while prices eased during the middle of the week, cash fluctuating between £279 and £275, subsequently recovering to £277; middle of October, £282 to £281 10s, and three months' from £284 to £282 10s, while since done at £283 10s. Thursday's market showed no material change, cash being sold at £274 to £276 10s; early October at £281 10s, and three months' at £282 10s to £284, finally at £282 10s. At Friday's session little change occurred, cash realising £276 10s to £276 15s, and three months' £283 to £284. English ingots, £276 to £277. Copper: The standard market, on fair offerings at intervals, declined until the middle of the week, when cash was selling at £93 5s to £93 10s; and three months', £95 10s to £95 15s, these positions settling down on Thursday at £93 10s and £95 10s respectively, only a small business being done. The tendency was firmer at Friday's session, cash improving to £94 10s paid, and three months' to £96 5s. Electros £112 to £117. Lead steady at £35 5s to £35 15s. Spelter easier at £41 10s to £43. Antimony: English regulus, ordinary to best, £60 to £63. Aluminium: Home trade, £165; export, £185. Wire bars quoted at £115 to £116.

TALLOW.—Messrs Colchesters and Woolner write on August 11th as follows:—The tallow market was very firm during the week, with prices continually advancing. There was a lively demand, which could not be dealt with owing to the disinclination on the part of sellers to operate before seeing the result of to-day's auctions, when closing prices were 15s to 20s above those of July 21st. At auction to-day 1,991 casks tallow were offered, and all were sold. Quotations are:—Australian mutton: Fine, 80s; good to fair, 78s to 77s; dull to dark, 73s to 68s; hard, 79s. Australian beef: Fine, 80s; good to fair, 79s to 78s; dull to dark, 75s to 72s; sweet, 80s. Present shipment from Australasia: Mutton, fair coloured, 48 degs., none; and mixed, 43½, c.i.f., London, 75s. The market letter is dearer, 11s tallow, 12s stuff. Town tallow, 70s per cwt. Rough fat per 8 lbs, 10d to 1s 6d; melted stuff, 54s per cwt. Quotations are:—Town: 68s net cash, naked, ex works. Country: Frail casks, 60s; home melted, shipping casks, net f.o.b., good coloured, none; fair to dull, 70s to 65s. Bone fat: White, none; pale, 65s; benzine, 60s; melted stuff, 60s, f.o.b.

BASS, RATCLIFF & GRETTON, LIMITED.

REPORT OF THE DIRECTORS

TO BE PRESENTED TO THE ORDINARY SHAREHOLDERS

at the THIRTY-FOURTH ANNUAL GENERAL MEETING,

TO BE HELD AT THE OFFICES OF THE COMPANY, BURTON-ON-TRENT,

On Monday, the 16th August, 1920, at 12.30 o'clock.

DIRECTORS:

Col. JOHN GRETTON, M.P., *Chairman.*

Col. ROBERT F. RATCLIFF.
Major H. F. GRETTON.
P. W. RATCLIFF.
GERARD A. CLAY.
JOHN LAMBRICK.
CLAUDE N. BURT.

The Directors submit to the Shareholders the Balance Sheet of the 30th June, 1920, and Profit and Loss Account for the year ending on that date, showing a Profit, before charging Interest on Debenture Stock, of £535,089 13s 8d, which, with £60,080 5s 7d brought forward from the previous year, makes a total of £595,169 19s 3d. Of this amount £210,000 has been appropriated to the payment of Interest on Debenture Stock, Dividends on Preference Stock and an Interim Dividend of 3 per cent. on the Ordinary Shares, leaving a balance of £385,169 19s 3d. Out of this it is proposed to declare on the Ordinary Shares a further Dividend of 8 per cent. (£163,200), making 11 per cent. for the year, free of Income Tax, payable on the 30th August, 1920, to provide £60,000 for Income Tax, to place £100,000 to the Reserve Fund (which will then amount to £700,000), and to carry forward to the next account the balance of £61,969 19s 3d.

The Directors again consider that they have made sufficient provision for contingencies which may be reasonably foreseen.

The retiring Directors are Col. John Gretton, Mr. John Lambrick, and Mr. Claude N. Burt, who offer themselves for re-election.

The retiring Auditors, Messrs. Cooper Brothers & Co., are eligible and offer themselves for re-appointment.

Burton-on-Trent,
4th August, 1920.

By Order of the Board,
C. F. PRICE, Secretary.

THE MONEY MARKET.

MONEY has become gradually scarcer, owing to tax payments, the displacement caused by the payment of railway dividends, and calls on the market by the Scottish banks. These are more or less temporary causes of disturbance, but it was also believed that applications for Treasury bills were on a considerable scale, and it will be noted that the Bank return shows that the Bank's holding of Government securities has been reduced by $9\frac{3}{4}$ millions, presumably by the repayment of Ways and Means advances, by which the basis of credit has been contracted, and the Other Deposits are nearly 7 millions lower. Loan rates consequently stiffened materially, and the discount market was also harder, being braced by the renewed weakness of the New York exchange. Light has at last been thrown on

the intentions of the French Treasury with regard to its share of the Anglo-French loan for $500,000,000, due for repayment in New York in October, and it appears, according to a Reuter telegram, that France is negotiating for a new loan of $147,000,000.

The Bank return and currency notes return both showed some improvement in a position which wants a good deal more. The Bank's stock of gold rose by £14,000 and its circulation declined by £683,000, making the Reserve £697,000 higher. Government securities were reduced by £9,742,000, but the Other securities expanded by £2,311,000, and there was thus a net reduction of 6¾ millions in the deposits, more than the whole of which came off Other, Public being a trifle higher. The currency notes circulation declined by £4,981,000 to £358,411,900, which includes £5,795,700 for notes called in but not yet cancelled. The fiduciary issue is £311,311,900, or £9,288,100 below the maximum.

* * * *

The following table shows Public Income and Expenditure for the week ended August 14, 1920 :—

Receipts.	Mln. £	Expenditure.	Mln. £
From Revenue	19·432	Supply Services	8·400
Added to Exchequer balances	Mln. £ 97	Interest on Debt	1·381
eduction of Debt	8·267	Sundries	1·287
	8,364		
	11·068		11·068

These operations reduced the debt by a sum of £8,267,637, and caused the following changes, which are reflected in our table of National Debt given in another column :—

	Mln. £		Mln. £
Treasury Bonds	+ ·179	Bank of England Advances	— 3·500
National Savings Certificates	+ ·200	Advances by Public Depts.	— 5·000
Treasury Bills	+ 1·589	Surrenders of Bonds, &c.	— 1·735
	+ 1·968		— 10·235

Property and income-tax yielded £6,760,000, while Customs and Excise contributed £4,197,000. Excess profits duty brought in £4,337,000, and special receipts under Miscellaneous amounted to £1,131,180. The floating debt was reduced by £6,988,000.

* * * *

Although there was considerable activity, especially in dollars, on Thursday, the exchange market has been quiet. The dollar, after coming over rather firmer from New York on Saturday last, began to slip away again in the middle of the week. On Thursday the rate came 3 cents lower from New York, and closed in London at 3.60½; yesterday again it was 1½ cents lower at about 3.59. Political uncertainties in Europe and the autumn drain are fully sufficient to account for this lack of confidence in New York, which has been the occasion for some speculative selling. Futures are again a little wider at somewhat more than one cent per month above spot. Paris, after weakening to 50 and just under, has moved upwards again, mainly on consideration of the largeness of the loan which that country is said to be asking for in the United States and uncertainty whether this amount will be obtained. In the meantime the secret of French preparations for meeting the Anglo-French loan is still well kept, and there have been no signs of active buying of dollars over London. Yesterday the Paris rate was 50.50, a rise of 20 centimes on the previous week. The spread between spot and futures is rather narrower, at somewhat under 15 centimes per month below spot. The Brussels rate, at 47.40, has, contrary to recent movements, drawn during the week a little closer to the French, being only 3f 10c below, as compared with about 3f 20c a week ago. The most violent movement of the week has been in the lira, which stood yesterday at 77.50, as compared with 72.80 a week ago, mainly on the fears of further labour troubles in Italy, which are making even more difficult that country's enormous task of improving its trade position. Among the late enemy States Vienna has again risen, while the falling-off of foreign purchases of German securities has made it more difficult to maintain the value of the mark, the rate having risen yesterday to 179 from 168 a week ago, having on Thursday been well above 180. The quotation for futures remains unchanged at ¼ per month below spot. Except for Christiania and Copenhagen, which have again gone slightly in our favour, and Stockholm, which has remained almost stationary on the week, the neutral exchanges have moved against us, Switzerland from 21.88 to 21.64, and Spain from 24.12 to 23.90. Amsterdam, from 11, has reacted to 10.97, futures remaining about the same at 3 to 5 points per month below spot. With the continued rise in the price of silver, Shanghai has moved up 2d to 5s 11d, and Hongkong 3d to 4s 4d. Rupees are a fraction cheaper at 1s 10½d-¾d (last week 1s 10¾d-11d). Yen are unchanged.

EVENTS OF THE WEEK.

August 14th.—First meeting of Labour "Council of Action." Polish delegates leave for Minsk.

August 16th.—Parliament adjourns. Anti-French demonstrations in Upper Silesia.

AUGUST 17TH.—British "Council of Action" delegates leave Paris by request. Polish counter-offensive at Warsaw. Minsk Conference opened.

AUGUST 18TH.—Poles drive back Bolshevists, and 10,000 prisoners reported taken.

AUGUST 19TH.—Second sitting of Minsk Conference.

THE WORLD'S MONETARY PROBLEMS.

WHETHER the much-postponed International Financial Conference, now fixed for September 24th, will really meet at Brussels in 1920 no man can say, but it is already producing good results. It was lately announced that Germany, Austria-Hungary, and Bulgaria have been invited to send representatives, which is evidence of dawning sense among the leaders of the Allied peoples, and some valuable literature prepared for the information of the Conference is being published by Messrs Harrison and Sons for the League of Nations. A number of these papers, which are crammed with useful and illuminating facts and figures, were acknowledged under "Publications Received" in last week's *Economist,* and we have now before us Paper No. XIII. (3), a Memorandum on the World's Monetary Problems, by Professor Gustav Cassel. This document supplies an exposition of the causes that have led to the present monetary chaos and the remedies by which it can be brought bac k to order. Professor Cassel, as need hardly be said, is a first-rate authority, and he has the rare gift of expressing himself as clearly as the difficulties of the subject permit.

His Memorandum leaves the impression (though a summary of its contentions might well be added for the guidance of its readers) that what the world is suffering from is too much money and too few goods, attempts by Governments to control prices with one hand while they inflate the currency with the other, restrictions on the free interchange of goods between people and people, imposed especially by the new nations that have been created by the Treaty of Peace, and the physical deterioration of the European transport system. We gather that in order to put things right he would make all Governments live on or within their incomes from revenue, and reduce expenditure to a point at which the necessary taxes can be paid out of current income without touching on savings, and should cease to interfere with the freedom of trade in the widest sense of the phrase.

"If," he says, "we really wish to make an earnest effort for the recovery of the world's economic life, we shall invariably find.....that the first thing to be done is to stop the process of inflation.....Now, the stopping of inflation necessarily involves the establishing of a definite scarcity of money. Where the supply of money can be arbitrarily increased, demands for money will always be sure to come forward. Governments will spend more than the actual savings they have at their disposal, enterprising promoters will require more capital than the community can save, housing schemes will be pushed without regard to the real possibilities of the supply of capital, labourers will ask for higher wages and other labourers will follow them, tradesmen will increase their selling prices, and profiteers will take advantage of the general wave of price enhancement. In one word, we shall have all the factors set moving which people generally look upon as the real causes of a general rise in prices.....These factors are *always* at work as tendencies, but they are, normally, kept within due limits by a definite scarcity of money imposing the hard necessity of restriction." Professor Cassel gives the weight of his authority to the view, already endorsed by the leading economists of this country, that one way to ensure the necessary scarcity of money is through high bank rates. He is somewhat dogmatic on the point, on which, with all deference to him and the other distinguished thinkers who agree with him, we venture to submit that a little doubt may be permitted. "The general means," he says, "of keeping up a monetary standard is the sufficient limitation of the supply of means of payment in that standard. The principal regulation of this supply is the rate of discount. In the whole world the rates of discount have been too low during the war.....It is often said that a high rate of interest hampers production and makes it dear. This is false. An interest policy which gives the scarcity of capital its true expression in a sufficiently high rate of interest can in no way prevent the productive powers of the community from being fully employed. It only directs these powers to a certain extent from future needs to present." Are these assertions inevitable truths? It may be that a high rate of interest cannot prevent the productive power of the community from being fully employed, though most producers would probably say that they will develop business more readily when they can borrow cheaply, but the Professor has failed to show that it does not make production more costly. And does a high rate necessarily divert productive power from future needs to present? Professor Cassel gives housing as an example, and argues that "if the rate of interest had been raised so as to correspond to the real scarcity of savings, and if the sum spent on house building had been in consequence thereof reduced within the limits of real savings available, the productive powers of the community would have been directed to a greater extent to satisfy its immediate needs, and an equilibrium would have been attained between the buying capacity directed to consumption and the mass of consumable goods. Thus a right interest policy would have prevented a rise in prices." But does it really follow that if we had a 10 per cent. Bank rate, not only would house building be checked, but a number of people who would otherwise have built houses would have set to work to produce food, clothes, boots, and other "consumable goods"? To the unenlightened reader there seems to be a gap in the argument. Given the necessary scarcity of legal tender, pressure on the banks for the limited supply of credit which they would be enabled to erect on its basis might very likely lead to higher rates for credit. This would be a natural and businesslike development, but to go ahead of it and screw Bank rates up by way of remedying a difficult industrial position seems to be a policy that is at least open to question. The necessary scarcity can be obtained if Governments cease to print new currency or to manufacture credit that is used as the basis of credit; until they do so cease rising prices and expanding currency and credit will tend to make higher money rates ineffective.

Professor Cassel is also somewhat scornful concerning the belief that if the supply of money is kept at or about its present level the general economic development will increase the demand for money so much as to match the present supply; he calls this a "particularly vain expectation," because "this policy would involve a continual depression of the general level of prices by about 3 per cent. per annum," and "the most probable result would be a more or less complete killing of industrial enterprise and of the very spirit of economic progress." Does this necessarily follow? Between July 1, 1864, and January 1, 1895, the *Economist* Index Number fell from 3792 to 1923, the percentage figure (100 for the original basis period of 1845 to 1850) falling from 172 to 87. This experience seems to show that prices can be practically halved in a period of 30½ years, and that the spirit of enterprise and economic progress can be quite alive at the end of it; and a process which gradually reduced prices by a half in the course of the next 30 years ought to satisfy all but the more ardent deflationists, of the kind who want to make bonfires of Bradburys or put Bank rate up once

a week. But owing to the depreciation of the buying power of gold it would only be necessary to reduce prices in England by about 20 per cent. in order to establish parity between the paper pound and the golden sovereign, and it is pleasant to note that Professor Cassel considers deflation to this extent to be quite possible. When we have secured that much it will be time to consider whether it is desirable to go further and how far.

In the limited space available it is impossible to do full justice to the Professor's most interesting and suggestive paper, which should be studied by all who are groping for a path back to order in finance and industry. We can only refer to his view that it is in the interest of all countries trying to improve their dollar exchange that the United States should not deflate, and of those that want to restore parity with gold, that the value of gold should not be allowed to rise. From this point of view the practice of gold hoarding, which even England—the one country that used to be really free from it—seems now inclined to adopt, seems to be particularly vicious at present.

On the subject of exchange, Professor Cassel introduces an interesting new departure in the shape of "purchase power parities," which seem to mean the rate of exchange calculated according to the relative internal buying power of the two currencies, the exchangeable value of which it expresses. "The purchasing power parities," he says, represent the true equilibrium of the exchanges, and it is, therefore, of great practical value to know these parities. For this purpose he suggests that "figures based on the mean monthly inflation in different countries ought to be laid before the world some few days after the end of each month." But such figures would inevitably take some time to collect, and so would always be stale; they would often also be untrustworthy, as is shown from the difficulty of arriving at the truth about the cost of living anywhere. And a parity which continually shifts, though highly interesting to the student, would seem to have little practical value in business. If "stabilisation" is to be secured, it will surely have to be got through a system based on a more or less stable foundation. To this end it would seem desirable to get sterling back to a gold basis, and then let the European nations regulate the exchanges of their reformed and readjusted currencies by holdings of sterling bills, as was done successfully for many years before the war by Austria. It will take a long time to establish or re-establish this system, but it seems to promise real stability if ever we can get back to it.

In the meantime, it is something that at long last a clearing house for Austrian debts has been promised, but the Brussels Conference is likely to work with a much more hopeful spirit if it is made clear that the Allied Governments really wish to further reconstruction in Central Europe, and make good the gap in industry and production the existence of which will defeat the best devised schemes of monetary reform.

THE DIRECTION OF OVERSEAS TRADE.

In view of the latest estimate of the Board of Trade with regard to the "real" balance of trade which calculates that for the first six months of this year there has been a balance of £70 millions in favour of this country, after making allowance for shipping services, income from investments abroad, &c., the figures published in the trade returns this month showing the source of imports and destination of exports for the first half of the year are worthy of attention. With a favourable trade balance of these dimensions, the foreign exchanges should, theoretically, be much nearer to the normal than they are at present, but, as we pointed out last week, the question of payment and credit has a great deal to do with the matter. From the figures below it will be seen that while Europe is our debtor, we are debtors, on the published figures, for a much larger amount to the United States and other foreign countries. And whereas we have to grant long credit to many of our European customers, we make much prompter payment to the United States and other foreign creditors. To bring this point out clearly, we have analysed the Board of Trade figures so as to show the trade balance with Europe, the United States, other foreign countries, and the Dominions, so far as merchandise is concerned. In the table below we give also the figures for the corresponding periods of 1914 and 1919 for comparison :—

JANUARY to JUNE.

	1914.		1919.		1920.	
	Excess of		Excess of		Excess of	
	Imports.	Exports.	Imports.	Exports.	Imports.	Exports.
	Mln. £	Mln. £	Mln. £	Mln. £	Mln. £	Mln. £
Europe	29·4	..	..	137·9	..	107·4
U.S.A.	34·5	..	231·5	..	230·6	..
Other Foreign Countries	..	3·4	62·0	..	59·6	..
British Dominions	0·6	..	171·1	..	77·2	..
	61·1	..	326·7	..	260·0	..

The change as compared with 1914 is a striking one, and there is some ground for satisfaction in the comparison with 1919. Europe's unfavourable balance in trade with us is considerably reduced, largely owing to the Continent's recovery in capacity to export. In the case of the United States and other foreign countries, the balance against us has been slightly reduced, and with the Dominions it has been reduced by more than half. The table, however, clearly shows that our trade with the United States forms the keystone to the situation.

Turning to the trade with individual countries, we show first our imports from Europe in the first half of each of the past seven years :—

IMPORTS—JANUARY to JUNE.
(000's omitted.)

From.	1914.	1915.	1916.	1917.	1918.	1919.	1920.
	£	£	£	£	£	£	£
France	23,929	15,670	15,322	11,588	16,742	19,884	40,843
Italy	4,527	6,140	6,399	5,551	7,938	6,724	10,570
Switzerland	5,7/5	7,489	8,551	5,830	8,655	4,965	20,072
Spain	6,873	9,044	12,766	11,268	14,471	17,298	20,152
Portugal	1,490	1,940	3,008	2,381	4,787	6,282	4,164
Belgium	11,469	741	932	160	114	754	24,702
Germany	39,531	248	327	1	1	9	11,896
Aust.-Hung.	3,803	24	6	..	..	3	1,561
Greece	676	1,321	1,642	432	1,044	4,145	2,136
Roumania	1,770	2	..	..	..	..	138
T'rky(Europ)	652	213	101	21	2	520	2,266
Russia	15,252	5,376	4,590	2,363	1,873	1,815	12,210
Sweden	5,909	6,837	8,829	4,544	11,246	12,575	23,753
Norway	3,575	6,881	8,935	8,315	13,758	8,462	13,025
Denmark	12,054	12,371	10,276	10,744	1,947	2,120	14,298
Netherlands	11,493	11,951	10,631	11,787	5,487	5,118	18,311
	148,778	86,248	92,315	74,985	88,066	90,674	220,097

As compared with 1919 the increase is general, with the exception of Portugal and Greece, and is most marked in the cases of Belgium and Russia. Imports from Switzerland, Scandinavia, and Holland also show a large expansion. Imports from Germany and Austria are still well below the pre-war figure, even without making allowance for present-day values.

The next table gives imports for the same periods from other Foreign countries :—

IMPORTS—JANUARY to JUNE.
(000's omitted.)

From.	1914.	1915.	1916.	1917.	1918.	1919.	1920.
	£	£	£	£	£	£	£

Argentina	18,004	32,297	24,335	26,850	26,348	33,095	70,004
Brazil	5,183	4,665	5,096	5.608	3,962	6,143	8,290
Chile	2,996	4,739	6,215	4,627	8,992	3,541	7,263
Peru	1,180	1,572	1,614	1,688	3,575	3,608	7,322
Uruguay	1,564	1,553	1,513	2,483	3,743	5,576	3,411
Japan	2,047	4,537	5,046	7,328	11,779	13,142	12,853
China	1,976	3,224	3,798	4,096	5,154	8,540	12,710
Trky(Asiatic)	1,648	261	137	315	463	1,781	3,984
Oth'r c'ntries	11,865	17,368	17,559	22,024	19,555	26,589	34,143
	120,619	200,250	228,167	236,605	348,516	368,506	499,350

After last year's slight reduction, there has again been a large expansion in imports from the United States. Argentina has more than doubled her exports to us, but Japan is exceptional with a slight decline. Similar figures for the Dominions are given next :—

IMPORTS—JANUARY TO JUNE.
(000's omitted.)

From—	1914.	1915.	1916.	1917.	1918.	1919.	1920.
	£	£	£	£	£	£	£
Canada	9,899	14,487	23,384	27,310	44,566	48,243	33,974

StraitsSettlements	7,134	9,621	8,685	8,530	5,240	9,171	10,090
Malay States	1,338	1,660	2,517	5,117	1,193	3,771	4,116
West Indies .	1,373	2,177	2,817	2,846	2,658	5,651	8,831
Other Possessions	3,896	4,607	5,536	7,145	7,633	9,978	13,701
Total ..	106,487	142,606	153,719	188,809	215,602	261,899	313,887

Canada alone shows a decline, but the increase is small in the case of Australia and New Zealand. Imports from Egypt show a sudden upward jump, for which the high prices paid this year for Egyptian cotton are probably chiefly responsible.

Exports of United Kingdom produce to Europe compare as follows :—

EXPORTS—JANUARY TO JUNE.
(000's omitted.)

To—	1914.	1915.	1916.	1917.	1918.	1919.	1920.
	£	£	£	£	£	£	£

Greece.....	1,851	1,724	495	22	652	2,623	7,247
Roumania ..	1,573	230	..	..	..	1,540	2,491
T'rky(Europ)	1,833	128	25	92	402	3,410	7,039
Russia	8,505	4,611	8,895	15,156	109	2,634	5,087
Sweden	3,757	3,875	3,207	1,261	977	8,970	20,985
Norway	3,543	3,803	5,134	4,380	1,680	11,069	14,848
Denmark ..	2,995	3,696	5,059	3,809	980	16,342	15,576
Netherlands.	8,127	9,024	12,035	9,731	7,136	11,743	22,345
	88,940	74,055	99,935	110,848	95,207	182,791	253,465

Italy, Belgium, Germany, Sweden, and Holland lead the way in the increases, but the Swiss figures do not make good reading in conjunction with the import figures in a previous table, where a large increase was shown. Denmark, too, has taken slightly less. The figures generally compare well with those of 1914. In the next table, however, the comparison does not look quite so good :—

EXPORTS—JANUARY to JUNE.
(000's omitted.)

To—	1914.	1915.	1916.	1917.	1918.	1919.	1920.
	£	£	£	£	£	£	£
Unit'd States	17,769	12,330	17,156	19,179	13,090	10,607	42,282
Cuba	890	860	977	1,046	1,051	834	2,557
Mexico	389	142	160	355	439	624	1,567
Argentina ..	9,645	5,353	6,857	6,214	7,487	9,190	18,260
Brazil	4,034	2,310	2,885	3,436	4,170	4,711	9,784
Chile	2,569	720	1,868	2,145	3,491	2,848	3,390
Peru	706	261	468	786	806	823	1,872
Uruguay....	1,127	708	967	1,027	1,450	1,561	2,543
Japan	5,146	2,226	3,633	2,592	2,986	4,985	14,454
China	8,445	4,059	5,279	4,135	7,887	7,135	18,601
Trky(Asiatic)	2,877	23	205	254	605	2,674	9,332
Oth'r c'ntries	13,745	9,795	12,580	15,090	17,044	18,145	35,832
	67.342	38,789	53,035	56,259	60,508	64,137	160,474

There has been a welcome expansion in exports to the United States, and no declines are shown throughout the list in comparison with 1919, but making allowance for price changes, the comparison with 1914 is not too good.

In the case of exports to the Dominions, the increase, as compared with last year, is remarkable :—

EXPORTS—JANUARY TO JUNE.
(000's omitted.)

To—	1914.	1915.	1916.	1917.	1918.	1919.	1920.
	£	£	£	£	£	£	£
Canada	9,580	6,496	8,735	9,121	6,577	6,271	21,170
Australia ..	17,711	13,518	17,040	10,148	10,538	13,924	24,336
New Zealand	4,689	4,272	5,801	3,618	3,291	4,665	9,378
India&Ceyl'n	36,676	23,261	27,870	29,541	29,291	28,239	86,056
South Africa	10,830	9,189	10,937	9,383	10,333	9,806	22,423
Egypt	4,935	3,493	5,531	7,257	13,079	7,492	20,389
West Africa .	3,931	2,757	3,010	3,501	4,401	5,118	11,354
StraitsSettlements	2,612	1,740	2,454	2,161	3,288	2,611	7,381
West Indies .	1,233	853	903	1,099	808	797	2,222
Other British Possessi'ns	6,979	5,199	6,557	8,212	9,512	8,905	18,819
British exports to Possessi'ns	99,176	70,778	88,838	84,041	91,118	87,828	223,528

The outstanding feature is the increase shown for India and Ceylon, but with the exception of Australia, the increase in all other cases is more than 100 per cent.

The final table shows fluctuations in re-exports :—

RE-EXPORTS—JANUARY TO JUNE.
(000's omitted.)

To—	1914.	1915.	1916.	1917.	1918.	1919.	1920.
	£	£	£	£	£	£	£
France	6,205	7,342	7,185	8,576	7,491	13,605	28,368

Total ..	59,276	51,323	54,121	46,246	16,778	55,435	135,891

For France, Belgium, and Germany, there is a satisfactory increase as against last year, and a big increase is shown for the United States. Re-exports to the Netherlands show a sudden drop. The principal increases under British Possessions are shown by India, Australia, and Canada.

THE CO-OPERATIVE SOCIETIES.

THE co-operative movement in this country continues to make substantial progress, not only in its distributive capacity, but also in the manufacturing or productive field. Co-operation in the United Kingdom is almost entirely represented by the Co-operative Union, Limited, with headquarters in Hanover street, Manchester, whose chief functions are propaganda and education, including the organisation of the annual Co-operative Congress, which, this year, has recently taken place at Bristol. The Union consists of a rather complex congeries of affiliated societies, federations, and associations—wholesale, retail, distributive, productive, &c.—as shown in the following table giving the most recently published statistics (1918) :—

Class.	Numb'r of Societ's	No. of Members.	Share & Loan Capital.	Sales.	Net Surplus	Numb'r of Employees.	Salaries and Wages.
			Thou. £	Thou. £	Thou. £		Thou. £
Distributive societies ..	1,364	3,846,531	61,395	155,158	16,496	119,629	10,247
,, federations	5	61	31	122	8	31	3
Productive societies ..	95	37,393	1,974	5,714	398	9,745	912
Supply association	3	452	452	1,763	58	1,805	178
Special societies	4	693	61	621	25	593	50,092
Wholesale societies....	3	1,972	16,560	85,602	716	32,580	3,344
Total, 1918	1,474	3,894,999	80,473	248,980	17,702	164,383	14,734
,, 1917	1,478	3,835,376	69,355	224,914	18,194	162,503	12,087
,, 1916	1,481	3,566,241	67,349	197,295	19,150	158,715	10,838
,, 1915	1,497	3,310,524	62,230	165,034	17,004	155,379	9,929
,, 1914	1,510	3,188,140	58,705	138,473	15,204	148,264	9,213
,, 1913	1,508	3,011,390	54,919	130,036	14,260	142,995	8,491

It will be seen that the total capital now amounts to £80,000,000, and the sales to nearly £250,000,000, both figures representing a considerable advance over previous years. The three wholesale societies placed last in the above table are productive or manufacturing societies, and presumably sell the whole of their output to the distributive societies, in which case, of course, their £85,000,000 sales are included in—and, indeed, probably constitute the greater part of—the £155,000,000 sales of the distributive societies, and these sales are therefore included twice in the grand total of nearly £250,000,000 —in the first case as wholesale, and in the second case as retail figures. It is not quite clear whether the sales of the 95 so-called productive societies (£5,714,000) are also to be included in the sales of the distributive societies. One or two other points are rather obscure in the somewhat complex and heterogeneous organisation of the co-operative movement, but, from the purely economic and industrial point of view, our chief interest is in the three wholesale (manufacturing) societies—namely, the English C.W.S., the Scottish C.W.S., and the Irish C.W.S. The latest figures for these three societies are given in the following table :—

	Society Members.	Share and Loan Capital.	Wholesale Distributive Trade.	Net Surplus.	Number of Workers.	Wages.
		£	£	£		£
English	1,200	11,896,941	65,167,960	160,538	24,100	2,529,137
Scottish	261	4,456,296	19,519,485	547,993	8,324	797,510
Irish	511	25,975	914,242	7,527	156	17,109
	1,972	16,379,212	85,601,687	716,058	32,580	3,343,756

The total of share and loan capital given in this table does not quite agree with that given in the first table (£16,559,698). The very large difference between the net surplus of the Scottish C.W.S. and of the English C.W.S.—with nearly three times as much capital—is a point to be noted. It will be seen from the following table of the English C.W.S. productive works that serious losses were sustained in the margarine, tobacco, and jam works :—

	Year Ended June 22, 1918.			Year Ended June 28, 1919 (53 weeks).

(a) Loss.

Recent purchases of the English C.W.S. include Grappenhall Tannery at Warrington, land and buildings at Hull for jam-making extensions, Middleton's Wharf at Wapping, the Penner Cake Mills at Bristol, and motor works at Manchester, also land and buildings at several other places, the total amount sanctioned for such purchases being about £325,000. Besides these, the societies, both English and Scottish, have considerably extended their agricultural activities, and several additional farms have been bought, to the extent of nearly 15,000 acres. A certain amount of property is owned by the societies in foreign countries, including estates in India and Ceylon, and land and buildings in West Africa. The tea estates in Ceylon, including those of the Mahavilla group, Westhall Estate, &c., comprise an area of 4,677 acres, including 535 acres under rubber; whilst those in India, including the Mango Range group, Mirugalli and Sheikal Mudi, comprise an area of 13,871 acres, or 18,548 acres in all. Before very long the co-operative societies will probably have large interests in the fishing industry, and have already done a great deal in this direction.

It is not possible here to say more than a word or two about the broader aspects of the co-operative movement. The ultimate aim of the movement is the establishment of the co-operative commonwealth and the extinction of private capitalism. One need not attach too much importance to the inconsistency of denouncing capitalism in one breath, and then in the next urging the co-operative societies to get more capital; nor unduly emphasise the fact that the co-operative societies work with capital, employ labour, pay wages, and suffer strikes, and also sometimes show a balance on the wrong side of the profit and loss account, thus exhibiting all the frailties of other and ordinary human business enterprises. Taking higher ground and broader views, may it not be asked whether there is not room in our industrial commonwealth for the harmonious working together of many different forms of industry—co-operative societies, guild socialism, and even private capitalism.

BRANCH SHOP COMPANIES.

Some weeks ago, in reviewing the annual reports of the principal London store companies, we were able to show that very large profits had been made in the past financial year. In this article we propose to examine the accounts of several shop companies which have a large number of branches in various parts of the country with centralised management. Our list includes four grocery undertakings, three drapers, two men's outfitters, two chemists, two confectioners, and one butcher. It will be seen from the tables below that, as in the case of the London stores, profits were on a record scale last year, even after payment of excess profits duty and other increased taxation. The first table shows dividend distributions since 1910, from which it will be seen that the latest dividends compare very favourably with those paid just before the war :—

	1910	1911	1912	1913	1914	1915	1916	1917	1918	1919
	%	%	%	%	%	%	%	%	%	%

Plummer, Roddis	5	5	6	8	5	5	7½	8	10	15

* Free of income-tax.

Four of the companies pay a higher rate of dividend than in the previous year, the largest increase being made by Charles Baker and Co., who double the rate, after making a substantial advance a year ago. The grocery companies make no change, and, with the exception of Maypole Dairy, pay the same rate as for 1917. We have again been unable to obtain a copy of Fuller's report, but the interim dividend announcement for the current year, at the rate of 10 per cent. per annum, states that it is at the same rate as last year, and at the same time it is announced that 50,000 ordinary shares are offered to shareholders at par, and that a bonus distribution of one share for every two held is also shortly to be made.

We next show the fluctuations in net profits since 1913 :—

	1913.	1914.	1915.	1916.	1917.	1918.	1919.
	£	£	£	£	£	£	£

Plummer, Roddis	20,787	17,258	16,997	22,635	20,351	22,111	36,887

* Eighteen months.

In the aggregate, there has been an increase in net profits of 40 per cent. as compared with 1918, and of 123 per cent. as compared with 1913. At the annual meetings of most of the companies the increase in profits was ascribed to a much larger turnover than in the previous year. Most of the chairmen stoutly repudiated any charges of profiteering, and in the case of Lipton's, it was claimed that prices to customers were kept down to a minimum, the chairman stating that "had we further reduced our prices by only one-halfpenny in the shilling, we should have made no profit at all on our home trading." Many of the companies have been able to open new branches during the past year, and Lipton's have extended their export trade. Hope Brothers have acquired a new factory and increased the number of branches to 33. The last-named company shows a large increase in profits, as do also Charles Baker and Co., who are in the same line of business. Eastman's have made an astonishing recovery since the early years of the war, when profits fell heavily. Maynard's can show a remarkable record of expansion, with which the war has apparently not interfered at all. The Maypole Dairy, after a slight set-back last year, shows an increase of over £366,000. The smallest advance is recorded by the two chemists, Boots showing but a very slight increase.

The next table summarises the principal items of the balance-sheets :—

	Total Liabilities.	Reserves.	Leases, Property, &c.	Stock in Trade.	Goodwill.	Cash & Investments.
	£	£	£	£	£	£
Bobby and Co.	890,928	35,000	417,789	272,360	25,155	50,645
Boots (Eastern)	654,074	222,146	403,853	185,567	25,000	34,332

Plummer, Roddis	505,384	46,000	149,338	137,807	50,000	42,675

* Includes goodwill. † Dec. 31, 1917.

Two more companies than last year show goodwill separately—namely, Bobby and Co. and Plummer, Roddis, the latter putting it at £50,000, as against Bobby's £25,000. Of the remainder which show the item separately, two only have written it down, Charles Baker reducing it by £17,406, while Maynards have wiped it off altogether by the transfer of £5,583 from profits. In several cases it will be noticed that goodwill is still a very large item in proportion to total assets, especially in the case of the Home and Colonial and of the International Tea. At the meeting of Hope Brothers the chairman said that the question of reducing the item of goodwill had been raised from time to time, and he had been forced to reply that "the only way in which we could deal with it would be by a reduction of capital—a course which events have proved would not have been justified. Circumstances have altered, and we are now able to set aside £15,000 as a beginning in the reduction of this item." Stock-in-trade shows a large increase in all cases, but in some instances reserves appear somewhat scanty.

In the final table we show share prices and yields :—

Description.	Share.	Present Amount.	Price July 30, 1914.	Price July 31, 1918.	Price July 31, 1919.	Price July 31, 1920.	Present Yield.

The share market of branch shop companies has been fairly active during the year, and prices have kept up well. Eastmans ordinary have recently been prominent on the negotiations to amalgamate with Union Cold Storage. The International Tea Stores have come into the market as a borrower during the year under review, having issued in July, 1919, 250,000 7 per cent. cumulative "A" preference shares of £1 each at par. Liptons issued £600,000 in 6 per cent. debenture stock in July, 1919, and Bobby and Co. appealed for subscriptions for 250,000 7½ per cent. cumulative preferred ordinary £1 shares at par. The Maypole Dairy has increased its issued deferred capital from £555,000 to £2,158,332 during the past year, which accounts for the lower price of these shares as compared with a year ago.

Business Notes.

Government Investments.—A White Paper (180, price 1d) gives the amount of public money invested in registered companies, and the list is interesting in many ways. The most notable items are £325,000 in British Farina Mills, Limited (all in debentures), £1,700,000 in British Dyestuffs, £629,618 in British-American Nickel Corporation, £656,250 in Standard Shipbuilding, Edward Finch, and the Chepstow Property Company, £5,200,000 in Anglo-Persian Oil, £1,450,000 in British Cellulose, and £1,198,371 in those of the Commercial Bank of Siberia. A footnote to the last item explains that the assets held against it are "1,052 actual shares and orders to banks to deliver 44,213 shares." The whole story of this transaction clamours for elucidation. On the subject of it, the third report of the Committee of Public Accounts (182, price 1s) made the following observations :—

Your Committee have had considerable difficulty in understanding a scheme for financing General Alexieff which was started at the end of 1917, the Comptroller and Auditor-General having been unable to report upon it in full owing to the loss of a file in the Foreign Office. Two sums of money are involved—£500,000 given as a loan to a Russian financier on the security of shares in commercial concerns valued at 35,000,000 roubles, and £428,000 used for buying shares in a Siberian bank with regard to which certain security is held by the Treasury which they hope they may be able to dispose of. According to a paper (Appendix 25) received from the Foreign Office since their representative appeared before the Committee, the scheme was entered into at a time when it was most important to retain German forces as much as possible on the Eastern front, the German offensive on the West of 1918 being anticipated. The only way of doing this was to maintain a strong Russian army under General Alexieff capable of taking the offensive against Austro-German forces. Currency could not be sent direct either by ourselves or by our Allies. A scheme was therefore proposed to make the resources of the S.E. Confederacy, on whose

territory General Alexieff was then operating, available as currency through the machinery of a S.E. Confederacy or Cossack State Bank, to be set up by amalgamating existing banks, and this scheme was agreed to in principle by the Cabinet. In the event, the Cossack Bank was never set up, and no currency was issued through it owing to the spread of the Bolshevik resolution and the collapse of General Alexieff.

Other questions concerning the transactions are still obscure—in particular, why under the circumstances money was actually paid, to whom, by whom, and on whose direct authority, and whether anything was done with it which was of use to the cause of the Allies. We desire that the Treasury should arrange with the Foreign Office to have these and other relevant matters looked into, and should report to us further upon them.

It has recently been shown that a total sum of £1,698,000 is involved in this matter, a Supplementary Estimate for £770,000 having been presented on account of the Siberian Bank Scheme. The report which we desire to receive should extend to this item, so as to avoid the necessity for further inquiry when it appears on the Appropriation Account, and should explain why it was brought forward so long after the obligation was incurred.

The Committee is clearly fully justified in calling for a further report on what seems to have been a serious waste of public money by the Foreign Office, which has made matters worse by losing a file which ought to have thrown light on it.

June Railway Statistics.—The receipts per ton mile for all the controlled railways in Great Britain under the headings "General Merchandise," "Coal, Coke and Patent Fuel," "Other Minerals," and "Total Freight" traffic for the four weeks ended June 20, 1920, compared with the preceding four weeks were as follows :—

	Four Weeks Ended 1920.	Estimated Receipts per Ton Mile.	
		Gross.	Excluding Cost of Collection and Delivery.
		Pence.	Pence.
General merchandise (including live stock)	June 20	2·976	2·562
	May 23	*2·859*	*2·483*
Coal, coke, and patent fuel	June 20	·926	..
	May 23	*·826*	..
Other minerals	June 20	1·123	..
	May 23	*1·058*	..
Total freight	June 20	1·658	1·518
	May 23	*1·570*	*1·441*

The total tonnage conveyed shows a decrease of 1,946,000 tons, or 7 per cent., owing to the Whitsuntide holidays, and the principal fluctuations in specified commodities were as follows :—

Coal, coke, and patent fuel	1,158,000 tons	decrease.
Ironstone and iron ore	122,000 ,,	,,
Iron and steel	109,000 ,,	,,
Pig-iron	22,000 ,,	increase.
Limestone other than for road-making	30,000 ,,	,,
Road-stone	26,000 ,,	,,

The sixth issue of railway statistics, which will be available next week, shows that the average train and wagon load have slightly decreased. The average speed of freight trains has improved. A new table is being included to show the stock of locomotives on each of the 16 principal railways, and the percentage in use, available for traffic, &c., with totals for Great Britain. The particulars showing the progress made in the construction of rolling-stock reveal an increase in new stock of 32 locomotives, 48 coaches, and 2,153 wagons during the four weeks ended May 23rd.

Growing Railway Expenditure.—The figures of the railway receipts and expenditure for the three months ended June 30th last, recently issued by the Ministry of Transport, together with White Papers Cmd. 402 and 815, have enabled us to prepare the following table, which compares the first half of the present year with the first half of the year 1919. For purposes of contrast, we have added the corresponding figures for the whole of the year 1913. For the last-named period the ratio of working expenses to receipts was 63.3 per cent., but last year it was 91.6 per cent., whilst now it is 99.3 per cent. The percentages of the various items of expenditure to the whole are instructive. The first two have to stand the higher cost of material as well as of labour; the third takes the greater cost of coal and of enginemen's wages, whilst the fourth is practically all labour. Maintenance of way has now a lower percentage of the total expenditure than in 1913. If the figures for 1913 could be halved, and the result taken as the expenditure for the six months January-June, 1913, it would be seen that in the first four items there is now an increase, in the aggregate, of 200 per cent., of 100 per cent. in the next four items, and of 180 per cent. in the whole. The last two columns are of interest as showing the effect of higher wages. Traffic charges are mainly for labour, and in running expenses wages form a large percentage. These two items account for 30.9 per cent. and 29.2 per cent. respectively of the increased expenditure in 1920 over 1919. The maintenance and renewal of rolling-stock has received greater attention than have way and works, and this is reflected in the lesser percentage of increase in the latter.

Australian Banking Fusion.—We are informed that a provisional agreement for amalgamation has been entered into by the English, Scottish, and Australian Bank, Limited, and the London Bank of Australia. Under the agreement shareholders of the London Bank are to receive five shares of £25 each (£12 10s paid) in the English, Scottish, and Australian Bank for every nine shares of £22 10s each (£10 paid) in the London, together with a cash payment of £1 for each share—fractions of a share to be satisfied in cash at the rate of £19 16s a share. Holders of ordinary shares who have prepaid their liability of £12 10s per share are to receive £24 10s per share in cash. Holders of the preference shares (£10 each fully paid) are to have the option of receiving five shares of £25 each (£12 10s paid) in the English, Scottish, and Australian Bank for every nine shares of their present holding, together with £2 per share in cash (every fraction of a share to be satisfied in cash at the rate of £19 16s per share), or in lieu thereof £13 for each preference share in cash. Two directors of the English, Scottish, and Australian Bank will retire to make way for three directors of the London Bank. The agreement is subject to acceptance of the terms by 90 per cent. of the total number of each class of London Bank shares. Both banks were established in 1852, and registered as limited companies in 1893. The English, Scottish, and Australian Bank has 187 branches, and at the date of the last balance-sheet deposits stood at nearly £11 millions. The London Bank of Australia has 105 branches, and deposits of £8¾ millions. The head offices of both banks are in London, and in only four cases do branches overlap in Australia outside the capitals of New South Wales, Victoria, South Australia, and Queensland.

Indian Budget.—In our issue of March 6th we printed the salient figures in the Financial Statement of the India Finance Member for 1920-21. These have appeared this week in the form of a White Paper (Cmd. 892, price 4d), a memorandum by the Secretary of State for India relating to the accounts of the Government of India for 1918-19,

THE FULL range of import and export trading operations is covered by the Irving's specialized Over-seas service departments. These include Foreign Trade, with its counsel on markets and other buying and selling problems, Foreign Exchange, Credits, Collections, Securities and Commercial—the latter co-operating with the over-seas merchant or manufacturer in any situation which demands special attention to the entry, warehousing, insurance, delivery or the final settlement for his merchandise.

IRVING NATIONAL BANK
WOOLWORTH BUILDING, NEW YORK

LONDON OFFICE: PINNER'S HALL, OLD BROAD STREET

and the estimates for 1919-20 and 1920-21. Gross revenue and expenditure for the three years are given as follows :—

	Accounts 1918-19.	Revised Estimate 1919-20.	Budget 1920-21.
	£	£	£
Revenue	123,257,744	135,570,000	134,825,900
Expenditure	127,078,153	145,644,100	132,311,100
Surplus (+) or deficit (—) ..	— 3,820,409	—10,074,100	+ 2,514,800

In these figures all receipts are included in the total of revenue, and all outlay in the total of expenditure, except that the working expenses of the railways and the surplus profits paid to certain railway companies are treated not as expenditure, but as a deduction from revenue. In this table and all subsequent figures rupees are converted at 15 to the £. The final deficit for 1918-19 is better by £747,791 than foreshadowed in the revised estimate for that year. For 1919-20 an Excess Profits Duty was imposed, estimated to yield £7,400,000, but the limit of income liable to income-tax was raised to Rs.2,000, which entailed an estimated loss of £500,000. The revised estimate for 1919-20 shows, as compared with the Budget for that year, increases of £4,188,800 in net revenue and £14,931,500 in net expenditure, with the result that the surplus of £668,000 in the Budget estimate becomes a deficit of £10,074,100 in the revised estimate. Army expenditure claims £10,185,600 more than was estimated in the Budget. The Budget for the current year, 1920-21, shows a net revenue at £95,047,800 and net expenditure at £92,533,000. Compared with the revised estimate for 1919-20, these figures show an increase of £2,890,800 in net revenue, and a decrease of £9,698,000 in net expenditure. On the revenue side the chief increases expected are from exchange (£4,000,000), customs (£2,282,400), and land revenue (£1,708,867), and the chief decreases under income-tax (£4,273,534), and posts and telegraphs (£1,160,800). On the expenditure side, a projected decline of £112,447,100 occurs in Army expenses. The debt of India on March 31, 1914, 1919, and 1920 is stated as follows :—

	1914.	1919.	1920.
Productive debt—	£	£	£
(1) Railways	221,984,419	243,686,006	253,471,807
(2) Irrigation	39,440,938	44,491,078	45,084,378
Ordinary or non-productive debt	12,763,119	86,684,400	77,139,800
Treasury bills and short-term loans	..	32,829,000	35,309,000

The gross total of payments for interest on the debt in the Budget for 1920-21 is £17,672,700. Under this Budget, taxation per head of population is estimated at 5s 11½d against 5s 10.3d in 1919-20 and 4s 9.7d in 1918-19.

Trade Mission to the Far East. — In the spring of last year it was proposed in Manchester to send a mission to the Far East to inquire into the export trade in cotton goods from the United Kingdom, and to recommend the steps to be taken for its preservation and extension. Time went on and the right period of the year, which is the autumn, came round without any definite arrangements being made. The subject has recently been revived in Manchester, writes our Manchester correspondent, but this week it has been decided not to proceed with the mission until next year. The arrangements necessary for the required number of representatives to undertake an extended tour are very complicated, and in view of the time needed to bring these to a satisfactory conclusion, together with the difficulties caused by the abnormal conditions at home and abroad, it has been unanimously agreed that the mission would be most likely to prove beneficial if it proceeded at a later date. The stumbling-block to progress in connection with this matter is still finance. It is held that if the money is subscribed for by Manchester merchants, those who make contributions will expect a prior claim upon the information secured. There have been attempts to obtain a grant from the funds of the Cotton Control Board, but it has not been possible so far to secure the required amount.

Building Labour.—The Board of Trade has issued an official report of the Conference between the Cabinet Committee and the Resettlement Committee of the Joint Industrial Council of the Building Trades, which took place on August 17th. The Government proposals under discussion were briefly :—(1) That the numbers of skilled workmen in the trade should be augmented (a) by the grading up of unskilled labourers, (*b*) by the admission of more apprentices, including adult apprentices, and (*c*) by the admission of ex-service men as learners. (2) That a system of payment by results, accompanied by special safeguards for the workmen, should be adopted. (3) That overtime should be permitted on housing schemes. (4) That in return a guarantee should be given to operatives engaged on housing schemes against entire loss of wages through bad weather. The Resettlement Committee definitely rejected the proposals for a system of payment by results and for up-grading, but made counter-proposals for augmenting the supply of labour by the introduction of adult apprentices, and accepted in principle the Cabinet proposals in regard to overtime subject to adequate safeguards. In summing up the discussion Sir Robert Horne stated that the introduction of adult apprentices, on the lines suggested by the Resettlement Committee, was of itself inadequate to meet the position. He further pointed out that the Cabinet proposal with regard to remedying the loss of wages through bad weather was put forward as a concession to be made in return for the acceptance of other proposals. He also laid stress on the urgent need

for houses and the large number of ex-service men needing employment. It was arranged that Dr Addison should supply the Resettlement Committee with further proposals on behalf of the Government with a view to the holding of a further conference.

Laundry Charges. — A sub-committee of the Central Committee appointed under the Profiteering Acts has been investigating the question of laundry prices, and has produced what (suitably, perhaps) is a rather "wishy-washy" report. The Committee "is agreed that individual cases of overcharging are not infrequent"—a fact which everyone knew before—but the customer may seek in vain for any concrete suggestion of protection, unless it be the recommendation that laundry charges should be brought within the scope of the profiteering tribunals, which have proved so ineffective. No doubt the laundry customer is steadily adopting his only line of defence, by sending less to the laundry and washing more at home. And in that case he is more interested in an inquiry into soap prices than in this report on laundry charges.

Japanese Trade and Finance. — Latest advices from Tokyo report an abundance of loanable money in the money market, which leads to the expectation that the renewal issue of 100,000,000 yen Exchequer bills will be fully taken up. A general revival in the stock markets is reported, iron, shipbuilding, and petroleum shares being conspicuous. The silk market has shown a better tendency, prices having risen 160 yen since the beginning of the month on buying orders from abroad and the expectation that consignments to the Yokohama market will be reduced by the agreement between producers and factors to adjust the output. Bank notes in circulation are 1,089,000,000 yen, and advances by the Bank of Japan 376,000,000 yen. The rate for money at call is 3.6 per cent. per annum, and the discount rate 9.8 per cent. Foreign trade last month showed recovery, exports exceeding imports for the first time this year. The figures for the month were: imports, 154,000,000 yen; exports, 157,000,000 yen.

Roumania and Her British Creditors.—It was officially announced on Monday that the Roumanian Government and Parliament have taken the necessary steps to pay, "in the very near future," the arrears on Roumanian coupons held by British subjects in England. Of the four Roumanian loans known in London, three—those of 1880, 1891, and 1898—appear to be held almost entirely in France and Germany, and the only one quoted officially is the 4½ per cent. loan of 1913. On this the last payment of interest was made in October, 1918. It now stands at 50-60. Roumania's total pre-war debt was about £70,800,000, mostly spent on railways, harbour works, and other reproductive enterprises; her territory and population have been doubled by the peace, and Transylvania and Bessarabia are of high economic value. The agrarian reforms of 1907-8 were completed in 1919 by the appropriation, for the benefit of the peasants, of the estates of the absentee landlords and the religious corporations, and of the State domains, altogether some 2½ million hectares, or 5,175,000 acres, so that the peasant holdings will eventually amount to six million hectares, or 12,820,000 acres, about six-sevenths of the whole agricultural land. This will greatly increase production, for the cultivation of many of the large estates, leased to foreign middlemen who ground down the actual cultivators, was tending to exhaust the soil. The increase of trade, due to this reform and to the general "economic reorganisation" referred to in the announcement, should help to overcome the difficulty of remitting money, mentioned in a notice just issued by the Overseas Department of the Board of Trade dealing with the increased facilities now accorded by the Roumanian Government for payment for imported goods. It states that the rates of exchange fixed by the Board of Control, now abolished, have ceased to be operative, and a new Board has been formed with the same title, consisting of representatives of various departments appointed by the Minister of Finance. It meets there weekly, and gives permits to send remittances, or to take money, abroad. Importers can easily get permits to remit the price of their imports by cheque or bill at the current market rates of exchange, on producing evidence of purchase and an import permit for such goods as require it, but they may have a difficulty in finding the necessary drafts, as the supply of foreign bills is scarce, and many of the banks confine themselves to selling the bills they have bought. Travellers may only take out 1,000 lei at present rates unless they have a special permit, which takes some days to obtain. They are therefore advised to declare all their money on entering the country to the chief Customs official at the frontier, and to have the amount endorsed on their passports. They will then, apparently, be able to take out that amount on submitting their passports to the Director-General of Customs for re-endorsement before they leave.

Big Cotton Trade Dividends.—Our Manchester correspondent writes:—Although the Lancashire cotton industry has been depressed for several months, certain spinning companies continue to announce big dividends. This week two rather striking reports have been published. The directors of the Iris Mill, Oldham, have decided to pay an interim dividend for the past quarter of £1 per share. This distribution is equal to 133 per cent. per annum on the capital subscribed. The shares are of the nominal value of £5, on which £3 has been paid up. It may be mentioned, however, that out of this 60s 55s have come out of accumulated profits, and the original shareholders have only paid 5s for each share, the market quotation at the present time being £20. The directors of the Times Mill, Middleton, have decided to pay a dividend of 10s per share for the past quarter, and a bonus of £1 per share, the distribution being equal to 600 per cent. per annum. The £1 bonus will be in payment of a call, making the shares £2 paid up. It may be mentioned that of the £2, £1 15s has come out of the accumulated profits of the company, and the original shareholders have only paid 5s for each share.

Anchor Line.—The profits of Anchor Line (Henderson Brothers), Limited, for the year ended April 30th last have recovered substantially after last year's relapse, but are still a long way below the average for the past seven or eight years, as may be seen from the table below:—

Year Ended April 30.	1914.	1915.	1916.	1917.	1918.	1919.	1920.
	£	£	£	£	£	£	£

Carry forward .	86,962	95,413	107,607	146,912	130,113	144,974	141,399

* Deducted before arriving at profits.

For 1912-13 working profit was £328,600. Since last year the whole of the debenture stock has been paid off and cancelled, and nothing is therefore required from this year's profits for debenture interest. Depreciation is again deducted before showing profits, but £200,000 is transferred to reserve as against nothing a year ago. The distribution on the ordinary shares is unchanged at 20 per cent., free of tax, of which 10 per cent. is dividend and 10 per cent. bonus. The balance-sheet shows an increase of £1,424,600 to £2,223,700 in the property item, but cash and investments are £1,407,900 lower at £2,519,700. Debenture stock for £385,000 has been wiped off, and the amount in the hands of debenture trustees—£468,700—has also disappeared. The directors remark that owing to the continual increase in the costs of both material and wages, the price to be paid for new tonnage under construction for the company is causing the directors grave concern, whilst the rate of building progress leaves much to be desired.

Guest, Keen, and Nettlefolds.—After remaining steady during the war period, the profits of Guest, Keen and Nettlefolds, Limited, jumped enormously in the year ended June 30th last. It will be remembered that this company during the year purchased the shares of John Lysaght, but

the report does not indicate to what extent the great profit rise is due to this fact. Net profits at £860,510 compare with £343,121 for the previous year, both figures being struck after allowance for war taxation. Recent years' results compare as follows :—

	1913-14.	1914-15.	1915-16	1916-17.	1917-18	1918-19.	1919-20.
	£	£	£	£	£	£	£
Gross profits	401,722	384,400	424,480	433,453	446,645	417,141	934,530
Debenture interest	69,548	66,772	74,020	74,020	74,020	74,020	74,020
Net profit	332,174	317,628	350,460	359,433	372,625	343,121	860,510
Brought forward	239,016	270,441	357,319	377,029	405,712	173,316	235,687
Available for distribution	571,190	588,069	707,779	736,462	778,337	516,437	1,096,197
Preference dividend	86,000	86,000	86,000	86,000	86,000	86,000	200,756
Reserve	70,000	..	100,000	100,090	130,000	50,000	..
Ordinary dividend	144,750	144,750	144,750	144,750	144,750	144,750	633,836
Rate	15 %	15 %	15 %	15 %	15 %	15 %	15 %
Carried forward	270,441	357,319	377,029	405,712	417,587	235,687	261,605

The preference dividend absorbs rather more than double last year's figure, and 15 per cent. on the ordinary shares (10 per cent., plus a bonus of 1s per share) takes £633,836, against £144,750. The balance-sheet, which is analysed on a later page, shows a rise of £7½ millions in investments, against a similar rise in issued capital. Stocks show practically no change.

FRANCE.—LENS COALFIELDS—COMMODITY PRICES—RUSSIAN DEBT—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, August 18.

THE resurrection of the Lens coalfield is typical of the manner in which France, in spite of almost insuperable difficulties, is making an effort to repair the loss she suffered through the ravaging of her richest industrial regions by the enemy. At the date of the armistice this great mining centre was in such a condition that many competent judges expressed doubts whether it would ever be possible to reduce to order the chaos of ruins and twisted ironwork in which the Germans left what was formerly one of the most flourishing parts of industrial France. To-day 16,000 of the 35,000 inhabitants of Lens have returned, and the work of restoring the pits to working order is slowly but surely being carried out.

The Germans, in their deliberate desire to kill France economically, were helped by the peculiar geological formation of the coalfield. The coal beds in the Lens area are found at a depth, generally speaking, of between 600 and 700 feet, but for a distance of about 200 feet the shafts pass through a bed of very watery soil, and have to be carefully and solidly lined to prevent percolation. The Germans were aware of this peculiarity and dynamited the pit linings at the level of the water beds, releasing torrents that quickly drowned out the whole of the underground works. The first steps taken towards the restoration of the pits consisted in forcing cement into the soil—in some cases to the depth of 100 yards—in order to "blind" the water outlets. The extent of labour involved in this process may be gathered from the fact that something like 1,000 tons of cement has been required for each shaft so treated, and an expenditure of about 800,000 francs. When all the shafts have been cemented —and not till then, as they all intercommunicate —electric pumps, raising 240,000 cubic metres a day, will be used to empty the flooded workings. The Lens, Meurchin, and Lievin pits alone are estimated to contain 50 million cubic metres of water. The work is now so far advanced that it is hoped coal-getting will begin again by next spring, and that it will be possible during the coming year to extract 1,000,000 tons (in place of four times that quantity, which was the pre-war output). It will be some eight years, however, before the Lens field gets back to its full pre-war output, during which period the companies will require to construct from 12,000 to 15,000 miners' cottages to house their *personnel*.

Although it is as yet impossible to state that the cost of living has become appreciably lower in France, the wholesale prices of a large number of commodities continue to show striking modification downwards. In several instances, however, in metals and oils particularly, this has been followed by a reaction towards higher levels. The following table is printed by *La Situation Economic et Financière*:—

	Highest Prices. Jan.-May.	July 31.	Aug. 10.
At Havre—			
Cotton	970	661	653
Wool	1,715	1,180	1,170
Cocoa	425	225	225
Coffee	339¾	176	170
At Paris—			
Copper	762	586¼	615½
Tin	2,362	1,490½	1,597
Lead	307¼	221	226
Zinc	340	246½	262
At Marseilles—			
Colza oil	685	485	505
Linseed oil	625	445	465
Olive oil	1,300	887½	937½
Skins	925	775	775
Tallow	590	340	400
Alcohol	1,330	960	960
At Lyons..			
Silk	500	255	245
At Beziers –			
Wine	118.50	80	80

Much of the decrease in wholesale prices indicated above is regarded as due to the recent fall in freights, and this fall is regarded as almost certain to continue, in view of the fact that the world's tonnage of merchant shipping now amounts to 57 millions, as compared with 40 millions in 1914, or an increase of over 30 per cent., plus an additional total of new construction in hand on July 1st last amounting to 7,572,000 tons. These figures lead one writer here to predict the approach of a serious crisis in the shipping industry, and to emit a warning against investment in shipping shares.

In view of the enormous importance of the Russian debt as a factor in the present negotiations with the Soviet Government, an article by M. René Théry, which appears in *L'Economiste Européen,* is exceptionally interesting. M. Théry shows that at the end of 1913 the total debt of the Russian Empire amounted to 8,825,000,000 roubles (or 23,474,000,000 francs), of which 5,728,000,000 roubles had been contracted in respect of the general needs of the State and 3,097,000,000 roubles in respect of railways. What proportion of the Russian loans had been received from foreign countries it has always been impossible to state exactly, but M. Chasles, in a recent study published in the *Revue Economique Internationale,* fixed the total amount of annual interest payments made in France in respect of the Russian debt at 400,000,000 francs. If this figure be accepted as correct, it would appear that French investors are to-day creditors to Russia for nearly 8,000,000,000 francs of capital, and that the interest payments they formerly received were equivalent to 35·3 per cent. of the total sum paid by the Russian Government every year in respect of interest on and redemption of its debts. France is also estimated by the same authority to have held, down to the beginning of the war, shares and bonds in Russian private industrial enterprises to the amount of about 2,000,000,000 francs. Russia's foreign debt, however, was enormously increased during the war, by sums advanced

to her by the Allies, which amounted to the following sums :—

Lent by		Million Roubles.		Million Francs.
France.....	3,450 million francs..	1,297	..	3,450
England	£560 million	5,309	..	14,123
United States..	224 million dollars..	437	..	1,160
Japan	295 million yen....	289	..	761
Italy.....	35 million lire....	13	..	36
Total		7,345		19,530

Conversion in each case has been made at par.

M. Théry states in conclusion that as matters now stand France is a creditor to Russia (including the two milliards of francs invested in Russian industrial securities) for a grand total of 13,450,000,000 francs, of which 10,000,000,000 francs have been lent by private individuals, and 3,450,000,000 francs by the French Government.

The events in Poland, and what is widely regarded here as the capricious policy of Mr Lloyd George, have had a restraining effect on all departments of the Bourse, and transactions have been scantier than even the normal holiday conditions would seem to justify. The Russian outlook appears to have frankly puzzled the market, which has refrained from exercising its usual promptitude to express an opinion and remains reserved until definite explanations are forthcoming. The Rente market has been under the influence of the pending loan, arbitrage transactions in connection with which have caused a substantial fall back from 57.45 to 53.80 in the older Three per Cents. The Fours and Fives, however, have remained firm. Argentines, Japanese, and Brazilians have maintained their previous improvements, but Russians and Turks were heavy. Such statements as have been made by the Soviet Government in regard to the recognition of the Russian debt have been received with scepticism. Oils have been an exception in a generally dull market, Mexican Eagles having advanced from 534 to 550, and Shells from 347 to 351, while Royal Dutch have remained firm. Banks closed heavy, Banque de France showing a drop of 150 francs on the week, with a fall from 5,625 to 5,475, while Banque de Paris closed at 1,630 against 1,652, Union Parisienne at 1,235 against 1,255, and Credit Lyonnais at 1,620 against 1,641. Metallurgic descriptions shared the general heaviness, and so did transports and mines of all kinds.

The returns of the Bank of France for last week, the previous week, and the corresponding week of 1913 are as follows :—

ITALY. — FIGURES OF CAPITAL LEVY DECLARATIONS.

(FROM OUR CORRESPONDENT.)

TURIN, August 14.

THE first figures are available of the number of taxpayers who have made the declaration of estate possessed at December 31, 1919, for the purpose of assessment of the extraordinary capital levy imposed by decrees of November 24, 1919, and April 22, 1920. The statistics relate only, as yet, to the number of the declarations filed by taxpayers and not to their amount. But they are interesting enough :—

Region. 1	Number of Declarations Filed: In the Capital City of Each Region. 2	Number of Declarations Filed: In Total Territory of the Region (No.2included). 3	Proportion of Declarations Filed (No. 3) to 100 Inhabitants. 4
Liguria.....	11,394	20,483	1·79
Lombardy	27,282	25,730	1·54
Latium.....	14,953	19,073	1·45
Piedmont.....	18,100	49,490	1·41
Aemilia	6,905	33,711	1·23
Campania	13,594	37,429	1·09
Tuscany	8,896	25,933	0·94
Venetia.....	3,334	32,754	0·87
Marche	1,103	7,908	0·69
Apulia	1,693	14,698	0·67
Umbria	1,221	4,483	0·62
Sardinia	1,452	5,385	0·62
Sicilia	4,478	19,694	0·51
Calabria	676	6,930	0·45
Basilicata	230	2,068	0·42
Aprutium.....	379	5,311	0·33
Totals	115,650	361,080	1·00

The declarations are evenly distributed over all Italy. At the head of the list (the scale is descending according to column 4) are the great manufacturing and trading regions of Liguria, Lombardy, and Piedmont. Latium is third because of the great concentration of rich men in the capital, Rome. Aemilia occupies a high position as one of the most progressive agricultural regions. At the bottom are the poor regions of the South of Italy, and the two islands of Sicilia and Sardinia, with little or no industry. The wealth in Italy is not concentrated in one single city, as is seen by the column 2, which gives the figures for the capital cities of each region: Genoa (Liguria), Milan (Lombardy) Turin (Piedmont), Bonania (Aemilia), Naples (Campania), Florence (Tuscany), &c. In Latium, however, Rome absorbs nearly all the declarations. If you add to the 115,650 declarations of the capital cities of the regions another 66,000 declarations of other cities heads of *provincia* (corresponding to French departments or English counties), you have a total of 181,650 *urban* against 179,430 *rural* declarations.

The number of declarations which ought to be made to the capital levy is by no means complete. The House of Deputies, in passing the Bill for the compulsory inscription of all stocks and shares and debentures—of which I will have more to say when it is passed by the Senate—has inserted in the Bill a clause in virtue of which an extension of time shall be given to taxpayers for filing a complete declaration as to bearer securities not previously declared. This is a sort of bill of indemnity given to reticent taxpayers to make up for their past reticence. The Government will have to fix the new date for new declarations. A great number of new declarations will also have to be made when the land has been valued at its true value at December 31, 1919. At present the valuation is made on an empirical basis, by multiplying by 325 the land tax paid to the Exchequer in 1916; with the consequence that many proprietors fell by this system under the exemption limit of 50,000 lire, and have not made any declaration at all. The land valuation will be a truly gigantic task, so that it may be justly said that the so-called capital levy

will not be made at all at a given moment—say, December 31, 1919—but will go on for many years to come.

Up to date nothing is known of declarations made in foreign States by Italians and foreigners liable to the levy. The foreigners are liable only for the part of their capital which is legally domiciled in Italy; while Italians are liable also for a part of the wealth acquired in foreign countries after August 1, 1914. But the difficulties of assessment will be even greater than for the wealth existing in Italy.

POLAND.—LABOUR PARTY AND THE WAR—POLISH AND RUSSIAN COAL PRODUCTION—TESCHEN COALFIELDS—JEWISH EMIGRATION—FOREIGN EXCHANGES—GOLD AND SILVER.

(FROM OUR CORRESPONDENT.)

WARSAW, August 11.

So long as the Polish troops were fighting in the Ukraina and in White Russia the war was really waged only by the army. The vast majority of the population, absorbed by home affairs, read with interest news from the battlefields, but did not take any active part in the preparation of victory. This has completely changed now. The whole nation has been roused by the advancing Russian troops out of its lethargy, and is determined to make all sacrifices for the defence of the country. Characteristic in this respect is the attitude of the Labour Party, which is in the foreground of the movement for the mobilisation of all national forces. The Polish Socialist Party is calling all workmen to arms. In an appeal the party is protesting against the revolutionary pose of the Russian generals, and against the contention of the Bolsheviks, that they bring liberation to the working class. "Never," says the appeal, "has a revolution been brought on the tops of bayonets. A revolution can be only the result of the will and effort of the working population. The Bolsheviks bring us slavery, destruction, hunger, poverty, and the degradation of the Polish workman. To invasion, to tyranny, there is only one answer—armed force."

About 100,000 men have volunteered; most of them are professors, students, schoolboys, &c. The first units of this army are already on the front, where they have exercised a very beneficial influence on the spirit of the other troops. Conscription of all men from 20 to 40 has been proclaimed. Until now only the youth has been in the fighting line, so that Poland has still very great reserves. Her economic forces are also greater than is generally believed. Certainly the country is exhausted by six years of war and occupation, but it would be wrong to overlook the great difference existing in the economic conditions of the Polish Republic and Soviet Russia. Though the increase of the Polish paper circulation can be only watched with anxiety, the 23 milliard marks which the Government has printed are only a trifle in comparison with the debauched Russian currency.

Nothing throws so much light on the economic strength of the two countries as a comparison of the coal production of Poland and Russia in the last two years. The four months' output of coal in the Russian coalfields in 1920 is 40 per cent. below that for 1919, and seven times less than the pre-war production. In Poland, as shown in my correspondence of December 14th (*Economist*, January 17th, p. 106), the coal production has been steadily increasing since the Armistice. In the first quarter 1919 it amounted to 60 per cent. of the pre-war level; in the second to 63 per cent.; in the third to 70 per cent.; in the fourth to 80 per cent. In the first quarter 1920 it fell to 70 per cent., in consequence of a protracted strike in March. The number of workmen in the Doneth coalfields was in 1920 97,000, as against 111,000 in 1919. In Poland 40,000 workmen are actually occupied in the coal mines, as compared with 27,500 in 1913. This is equal to 146 per cent. of the pre-war level. Mr Wierzbicki, one of the Polish delegates at the Peace Conference in Paris, declared before the Diet that no other country can boast of a similar increase of its mining population.

In Russia, the decrease of the productivity of labour in the coal mines shows, according to official data, an abrupt decline in 1919 and 1920. In Poland, the output per head amounted in the last quarter of 1918 to 0.40 tons per diem, in the first half-year 1919 to 0.50 tons, in the second to 0.57, in March, 1920, to 0.70. The pre-war level of 1.03 has not been reached. This is partly due to the shortening of the working day, partly also to the fact that the efficiency of new machines which are replacing the old ones, and which are imported from Germany, leaves much to be desired.

There is a strong tendency to import machines for coal mines from other countries; the difficulties met in this direction are, however, very great, especially in consequence of the unfavourable foreign exchanges. Steps have been undertaken to increase further the coal output, and experts are of the opinion that it will be possible to reach an output of one million tons monthly, while before the war the production amounted on average to 733,000 tons.

Though interest is concentrated now in the East, the delimitation of the Principality of Teschen by the Council of Ambassadors has stirred public opinion. The decision giving all the coalfields of this district to Czechō-Slovakia is considered to be very detrimental to Polish interests. Poland does not possess coking coal, for which the Teschen coalfields are famous, and actually the Polish blast furnaces and gas works are at the mercy of Czecho-Slovakia and Silesia. In the future such a situation may prove very dangerous. The Polish people consider that the decision of the Council of Ambassadors is contrary to the principle of national self-determination, because in the part of Teschen allotted to Czecho-Slovakia according to the census of 1910 out of a total population of 235,191, 170,368 were Polish, 113,647 Czech, and 34,623 German. In some districts which are now under Czecho-Slovakian rule the Polish population amounts to more than 90 per cent. of the total.

The Jewish emigration from Poland is on a large scale. About 250,000 Jews have registered themselves for emigration. In consequence of the insufficient shipping accommodation, it will take two to three years to take them overseas. The vast majority is emigrating to the United States. They belong mostly to the class of paupers who seek the assistance of their families who have emigrated earlier. Quite different is the character of the emigration to Palestine. The Jewish youth, full of enthusiasm and vigour, is leaving Poland to put its services at the disposal of the new Jewish State. Different transports have already left Poland for Palestine, and it is believed that many thousands will follow.

At the end of last week the foreign exchanges began to rise by leaps and bounds, and it was necessary to suspend the quotations at the Stock Exchange. Russian roubles rose from 335 to 365, so-called Rievneski roubles reached 88, English pounds rose from 750 to 825, French francs from 14.90 to 15.25, American dollars from 193 to 219, German marks from 467 to 517.

While the price of gold is steadily rising, silver has fallen about 30 per cent. Last week it was quoted 4,600 marks the kilogram. Actually 3,600 marks are paid for it. Gold is about 50 times, silver 25 times, as dear as before the war.

HUNGARY.—TRAMWAY NATIONALISATION—THE DANUBE STEAM NAVIGATION COMPANY.

(FROM OUR CORRESPONDENT.)

BUDAPEST, August 13.

NATIONALISATION of the Tramway Company of Budapest and the Electric City Tramway of Budapest produced complete failure. In the time of the Károlyi Government and revolution, both companies were nationalised, with the result that to-day they are burdened with a debt of 200 million crowns; nevertheless, the permanent way and rolling-stock is quite neglected and in great need of repair. Now the Government is in the embarrassing situation of having to return the tramways to the former proprietors, and to open negotiations with regard to the conditions of cancelling nationalisation.

Foreign insurance societies are leaving Hungary. The American companies stopped operations some time ago, and now the German and English societies follow. But English syndicates have acquired a great many of the shares of the Danube Steam Navigation Company, of the

Sud-German Navigation Company, and of the Hungarian River and Sea Navigation Company. The bankers and shipping firms interested in the above-named companies formed the Danubian Navigation Company, the business of which will be to develop the economic use of the great river.

CANADA.—CROP PROSPECTS—THE EXCHANGE SITUATION—EFFECT ON IMMIGRATION—SERIOUS BREAK IN STOCKS—TRADE CONDITIONS—THE EDMONTON AND DUNVEGAN RAILWAY—DISCOVERY OF OIL SHALES IN NORTHERN ONTARIO—PAYMENT OF WHEAT PARTICIPATION CERTIFICATES—THE CANADA-WEST INDIES TRADE AGREEMENT.

(FROM OUR CORRESPONDENT.)

OTTAWA, August 6.

THE crops have now almost passed the stage of speculation as to their fate, and it is reasonably certain that Western Canada will have a wheat crop well above the average of recent years. But the severe heat spell of July undoubtedly did considerable damage, and has left the crop in the great grain-growing province of Saskatchewan somewhat "streaky"—excellent in some areas and in the next stretch of country very poor.

There has been a serious setback in the European exchanges during the past ten days, and the English pound is now back to just a few cents above four dollars. The depression is likely to make its effect felt on immigration, for people are unwilling to take any considerable loss on their capital. It is reported that a large number of prospective immigrants from continental countries cancelled their passages to Canada at their ports of embarkation when they learnt how much they must forfeit by reason of the exchange. Throughout the spring and summer there has been a steady volume of immigration from Britain, and in June it was double the inflow from the United States.

Yesterday there was a serious decline in prices on the Montreal and Toronto exchanges. It is the result of an over-extended period of speculation. Thornton, Davidson and Co., a prominent financial house in Montreal, have suspended with heavy liabilities. The tightness of money had resulted in considerable loaning on the part of private individuals, and this suspension, coupled with other factors, has frightened private lenders to such an extent that they are calling in their loans. The liquidation on the local exchanges is the heaviest for many months, and has been fairly well distributed through the list of stocks. The breaks ranged from one-eighth to 18½, Spanish River preferred, a paper stock, dropping the latter number of points. On the other hand, the seriousness of the news from Eastern Europe has caused a decided rise in grain prices.

Trade conditions show little variation during the past month. The period of midsummer quietude is not over, but there are now symptoms that a flow of orders for the fall and spring trade may soon be available to hearten manufacturers and wholesalers. In Quebec and the Maritime provinces, moreover, the retail trade is active, and stocks will soon have to be renewed. Grocery and hardware wholesale houses report business good, but, on the other hand, firms dealing in draperies and boots and shoes complain of a decided dullness. In Toronto and Ontario generally manufacturers find business quite slack. Retailers are still purchasing from "hand to mouth," and wholesalers state that many of them may find difficulty in securing their supplies when the usual fall actively commences. Winnipeg has been enjoying a miniature trade boom, and as the result of activity in the building trade in that city and many country towns in Manitoba the lumber and hardware merchants find business excellent. Save in boots and shoes and clothing, other wholesalers find business as good as at the corresponding date in 1919, which was a very satisfactory year. Calgary, Saskatoon, and other western cities report business quiet, but expect an early revival now that all possibility of a serious disaster to the wheat crop has vanished. Collections throughout the country are very satisfactory.

The fate of the Edmonton and Dunvegan Railway has now been temporarily settled. It was constructed by the firm of J. D. McArthur and Co. to open up a valuable stretch of territory, but owing to lack of capital its road bed and equipment were both inferior, and it was unable to furnish an adequate service. Arrangements have now been made whereby the company will be reorganised, and a new directorate, on which the Alberta Government and the Canadian Pacific Railway will be represented, has been formed. The C.P.R. has leased the road for a short term of years, with the option of purchase. Considerable sums of money will be spent on putting the road in proper order, and under the C.P.R. management it should be a very profitable line.

Dr M. Y. Williams, of the Dominion Geological Survey, reports the discovery of large deposits of oil shales on the Abbitibbi and Mattagami rivers south of Hudson Bay. These shales are bituminous limestones, and quite different from albertite deposits of New Brunswick, which are a solidified mineral pitch. The latter yield between 90 and 120 gallons of oil and 80 and 90 lbs of ammonium phosphate per ton. The new deposits, however, are expected to prove just as commercially valuable as soon as the problem of transportation access to them is solved.

The Dominion Government has now begun the distribution of the proceeds of the participation certificates issued by the Canadian Wheat Board. A first instalment of 30 cents will be paid on each, and it is calculated that next month the prairie provinces will have distributed within their bounds at least $40,000,000, which should be useful in stimulating trade. The project of the grain-growers of forming a wheat pool to handle the 1920 crop has apparently fallen through, their leaders having reached the conclusion that it was too late to organise it with any hopes of success.

The terms of the new trade agreement between Canada and the West Indies have now been announced. The agreement increases in several instances the present mutual preference from 20 to 50 per cent.; it extends the free list; it provides for an extended steamship service—a weekly service between Canadian ports and the eastern group of the British West Indies, and a fortnightly service between Canadian ports and the western group. The weekly service is to come into operation as soon as possible, "and in any case within three years"; the fortnightly service with the western group must be inaugurated not later than January 1, 1921. In the case of the latter service, the vessels will be provided by the Canadian Government. If the service proves unremunerative, the Governments of the Bahamas, British Honduras, and Jamaica will contribute 25 per cent. of the loss under certain restrictions. In the other case, the various Governments will join in furnishing subsidies. The agreement concludes with a declaration that the representatives of Canada and the British West Indies will recommend for the consideration of their respective Governments that British-owned and British-controlled cables should be laid as soon as possible, without waiting for the termination of the agreement with the West Indian and Panama Telegraph Company, to connect Bermuda with Barbadoes, Trinidad, British Guiana, the Windward and Leeward Islands, and Jamaica.

SPAIN.—PAYMENT IN GOLD OF CUSTOMS DUTIES—A ROYAL DECREE.

(FROM OUR CORRESPONDENT.)

MADRID, August 15.

BY Royal Decree of August 10th it is stipulated that from August 16, 1920, all duties on merchandise, imported and exported, payable in gold by the law of March 20, 1906, modified by that of December 24, 1912, shall be realised at its full value in:—(1) Spanish gold. (2) Gold of the nations that form part of the Latin Union, England, United States of America, and all other countries authorised by the Minister of Finance. (3) Silver of Spanish coinage and notes of the Bank of Spain, with the surcharge to be fixed monthly by the Minister of Finance, taking into account the price of the medium quotation in the London market of fine gold in bullion. In the *Gazette* of August 13th a Royal Decree appears, dated the 11th inst., fixing the rules for the application of the above Decree, and also the surcharge to be imposed during the period August 16th to August 31st as 22.42 per cent.

Letters to the Editor.

THE NATIONAL DEBT.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Please allow me to help to enforce a statement made by Mr Clark in your issue of to-day. He says :—

"It is the heavy annual tribute in the shape of interest this debt demands that is responsible for a large part of the present discontent, and you cannot remove the discontent without removing the cause thereof."

In your issue of January 17th you published the first of the letters I have addressed to you under the above heading; and I now urge that the best way to get a clear grasp of our present position, considered from either an industrial or a political point of view, is to look back to the time when crowds of Russian soldiers were streaming home defeated in their great Japanese war. It was bitter for them to feel that if they had been under the control of a government as financially honest as that of their opponents the fortune of war would have been reversed; and it gradually became doubly bitter to have to realise that the cost of the war was not to be paid out of the then existing wealth of the country, but was being organised as a debt to be borne on the shoulders of all who might endeavour to create new wealth.

I have just above said "*paid* out of the wealth of the country," because that is the prevalent way of looking at such a transaction. But the fact is that the money had already been paid away, and the sound business course to take was to distribute the loss among the then possessors of the country's wealth and to write it all off as lost just as any honest banker writes off a debt he knows to be bad.

Where are now the *then* possessors of that country's wealth? Their memory lives as a warning that the nursing of bad debt is financial folly.—I am, Sir, your obedient servant,

WM. LEIGHTON JORDAN.

Royal Societies Club, St James's street,
August 14th, 1920.

A FAIR IN PRAGUE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Will you allow me to bring to the notice of your readers interested in foreign trade that a very important Sample Fair will be held in Praha, Prague, from the 12th to 28th of September, 1920. The Fair is the first of its kind in Czecho-Slovakia, and will in the future be held twice yearly. The importance of the Sample Fair is probably already known to your readers from the particulars published in the *Board of Trade Journal,* and submitted to the Chambers of Commerce.

The object of this letter is to invite all buyers or would-be buyers most cordially to a visit of the Fair, which will be a representative collection of Czecho-Slovak manufactures in all lines. Merchants and shippers will have an opportunity to get into direct touch with manufacturers, and secure their supply of goods of world-wide fame for all markets.

Detailed information and aid will be given by the Czecho-Slovak Legation in London.—I am, Sir, your obedient servant,

L. K. NEUMANN, Commercial Attaché.

Czecho-Slovak Legation, 8-9, Grosvenor place, S.W. 1.
August 13th, 1920.

REDUCING E.P.D.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Mr T. Stanley's letter, dated July 30th, is perhaps one of the best practical suggestions which have appeared in the *Economist* for some time. I would add to his list of suggested taxes a cumulative tax on dogs, horses, &c., say 20s for one, £2 for two, £4 for three, and so on, and especially to tax the motor-car seats—a car for one person beside the driver £1, two £2, three £4, and by doubling each time some effective grip can be got on the char-a-bancs and the number of cars kept in a household. Motor bicycles with sidecars should be double these rates.—Yours obediently,

W. HOFFMAN WOOD.

Queen square House, Leeds, August 16th, 1920.

THE MERCANTILE BANK OF INDIA, LTD.

Head Office : 15 Gracechurch St., London, E.C.3

Capital Authorised	£3,000 000

Fixed Deposit Rates will be quoted upon application.

On **Current Accounts** interest is allowed at 2 per cent. per annum on daily balances.

Books and Publications.

GOLD.

"Gold: Its Place in the Economy of Mankind." By Benjamin White, Fellow of the Institute of Bankers and of the Royal Statistical and Economic Societies. Sir Isaac Pitman and Sons.

MR BENJAMIN WHITE, a well-known authority on the precious metals, has contributed a pleasant little volume on gold to Messrs Pitman's "Common Commodities and Industries" series, and embellished it with interesting illustrations, anecdotes, and moral observations on the worthlessness of metal as compared with a contented mind, sunlight, and the charms of music. A great deal of solid information is packed in its 130 pages, and the history of gold is traced from the code of Menes and the second chapter of Genesis up to its experiences in the Great War.

NATIONALISATION.

"Nationalisation of Industries." A Criticism. By Lord Emmott. Fisher Unwin. 3s 6d net.

"The view of those who advocate nationalisation is that all capital should be held by the State. Capital is the result of saving. Whoever heard of a State, as such, saving, even before the war?.....The socialisation of all industries would remove the powerful incentive of personal gain, which has served such a useful purpose in the past." These passages are taken from a very clear and effective little volume, in which Lord Emmott riddles the nationalisation proposal with incisive and very practical criticism. An important contribution to the discussion is his demonstration that "in the present extraordinarily complicated conditions of industrial production there are few trades which are self-contained, and anyone who lends himself to the cry of nationalisation of any particular industry on the ground that it is a natural monopoly, while opposed to nationalisation as a whole, will find that he has taken a step down a very slippery slope, and that it is difficult to find a halting-place short of the quagmire of complete socialisation."

Traders interested in the Foreign Markets are invited to correspond with THE FOREIGN MANAGER.

Foreign Branch: 168, Fenchurch Street, E.C.3.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
August 26.	August 27.

THE stock markets have been extremely quiet, for apart from the normal lack of business at this time of the year, the general uncertainty of the outlook has militated against any strong recovery. On the other hand, prices, in spite of the paucity of business, have not been weak. There was a little activity in some of the speculative sections in the early days of the week, but in the last few days the investment markets have had a larger proportion of business. At the moment, however, public interest in the markets is at a low ebb.

In the gilt-edged section, the feature has been the firmness of the Five per Cent. War Loan, which shows some improvement on the week. There has been a demand for the 1927 and 1928 issues of National War Bonds for excess profits duty purposes, and some of the Exchequer Bonds have been bought. Victory Bonds, as an exception, have given way a little. The County and Corporation stocks have been quietly absorbed, and prices generally have moved up a little. Foreign bonds have been very quiet, and movements have been few and far between. Owing to exchange movements, French bonds have given way a little. It is understood that the lists for the new 6 per cent. issue will open on October 20th, and close on November 30th, but full details of the loan are not yet available. Some of the Japanese issues were higher as a result of the movement in the American exchange, but South American bonds fluctuated, Nicaragua Six per Cents. and Ecuador Salt Bonds rising on announcement in connection with payment of the debt service.

Home Rails have been moderately firm, but quiet, a few advances being scored by the heavies. Among foreign railways, a little buying of Argentine stocks, on good dividend prospects, sent prices up. Mexicans have dropped a little.

Business in the industrial market has been restricted. There was a rally in Dunlops, on the long-expected bonus share announcement, referred to elsewhere, but this was soon lost. Pears' preferred ordinary advanced on the exchange proposals with Lever Brothers. Shipping securities have been featureless, and iron and steel descriptions have attracted no attention. Marconis suffered from realisations, and Breweries have been irregular. Textiles were dull, Calico Printers falling a trifle on the profit statement. The rubber market has been quiet, prices, on the whole, showing little change. Anglo-Dutch Plantations of Java were a little lower at first on the directors' announcement of a bonus share distribution, but soon recovered. A good deal of attention has been absorbed by Biting shares, a company formed in March of this year. Reports of oil discoveries on the property have stimulated activity.

The oil market was active on the first two days, but boiled over on Wednesday, although there was no serious fall in prices. Yesterday saw some revival. Mines have been quiet on the whole, but cheered up a little towards the end of the week on Paris buying.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

	Nominal Capital. £	Cash Subscription. £	First Payment. £	Further Liability. £

April 1 to August 14, £2,600,000	200,000 ..	200,000

5-15 Year Treasury Bonds, repayable at par on May 1, 1935, bearing interest at a minimum rate of £5 per cent. per annum, payable half-yearly on May 1st and November 1st. Price of issue fixed by H.M. Treasury at £100 per cent., payable on application. These are still on offer. For full particulars see *Economist* of May 1, 1920, pages 899 and 915.

London Housing Bonds.—Registered bonds for £5 each or multiples thereof are obtainable for terms of 5, 10, or 15 years, at applicant's choice. Six per cent. interest and full repayment when due are guaranteed by the London County Council on the security of London's rates. Interest payable each September 30th and March 31st. The money will be applied solely for the purpose of housing schemes approved by the Government, and in particular to finance the housing schemes of the Metropolitan Borough Councils. We referred to these bonds in a leader in the *Economist* on June 12th, page 1282.

The Fruit and Produce Exchange of Great Britain.—Authorised capital, £1,250,000 in 500,000 8 per cent. cumulative participating preference shares and 750,000 ordinary shares, both of £1 each. The present is an issue of 300,000 preference and 262,500 ordinary shares, of which the preference only are offered for subscription at par. After payment of 8 per cent. on the ordinary shares, the preference shares participate equally. The company has been formed to acquire the businesses of nine fruit and vegetable merchants and salesmen. Negotiations for the acquisition of other similar businesses are also in progress. Messrs. Deloitte, Plender, Griffiths, and Co. certify the profits of the nine businesses since 1913, the aggregate for 1918-19, after payment of excess profits duty, but before charging income-tax, directors' or partners' remuneration, interest, or depreciation, amounting to about £48,000. The purchase price is fixed at £374,619, of which £262,500 is to be satisfied by the allotment of fully-paid ordinary shares and £112,119 in cash. No valuation whatever of the assets to be acquired is given, and past profits do not show a very wide margin over the preference interest. The control of the branches will be conducted by the present proprietors and managers, but whether each branch will continue to earn the same profits as part of a joint-stock concern remains to be seen. On the other hand, the company may be able to effect considerable economies, but too much risk attaches to the present issue for the average investor. The issue has not been underwritten. Applications from growers, packers, customers, and employees are to receive preferential consideration.

Fisher and Ludlow (1920).—Capital £200,000, in 100,000 7 per cent., tax free, cumulative preference shares of £1 and 200,000 ordinary shares of 10s. each, the preference shares being now offered for subscription at par. Geo. Clare and Co., Limited, the promoters, have applied for 100,000 ordinary shares at par, and the directors and their friends have also applied for 20,000 preference shares. The company has been formed to acquire the business of Fisher and Ludlow, Limited, of Birmingham, manufacturers of metal pressings and stampings, established in 1851. Net assets are valued at £118,407, which is fixed as the purchase price, the whole amount being payable in cash. Nothing is included for goodwill. Profits, which are only shown since 1915-16, have fluctuated between £22,300 and £60,400, before charging directors' fees, depreciation, income-tax, excess profits duty, &c. The information supplied in the prospectus is too meagre for the investor who has no inside knowledge of the history of the business to be acquired.

The Saunders Garage and Motor Car.—Capital £100,000 in shares of £1 each. The present is an issue at par of 60,000. The company has been formed to acquire motor garage businesses at Golder's Green and Hampstead. The purchase price amounts to £41,750, of which £14,000 is payable in shares and the balance in cash. The £14,000 is for the

Hampstead business, the net assets of which are valued at £9,883, while the balance of £27,750 in cash pays for the Golder's Green premises, which are independently valued at £32,000. With the Hampstead business the company acquire three separate leases and a tenancy agreement. No promotion profits are being made, and the purchase price does not appear unreasonable. But past profits are not mentioned, the estimated gross revenue for the future being £21,500. After payment of directors' fees, income and other taxes, depreciation, &c., this would not allow much of a return for this type of investment. The estimated gross revenue of £21,500 includes £10,000 from the sales of new cars and sundries, which the directors candidly explain "are more profitable than before the war, owing to the increase in values, whilst the percentage of commission remains proportionately the same." The motor boom, however, has probably passed its zenith, and we doubt whether agents will be able to maintain their recent standard of profits.

Brush Electrical Engineering.—The allotment letters for the recent issue of ordinary shares in the Brush Electrical Engineering Company, Limited, have now been posted.

COMPANY MEETINGS, &c.

MORRIS AND JONES (1919), LIMITED.

COMPANY'S SOUND POSITION.

SATISFACTORY YEAR'S RESULTS.

The first annual meeting of the shareholders of Morris and Jones (1919), Limited, was held at the Law Association Rooms, Liverpool, on Thursday, August 19th, Mr J. Evan Morris, chairman of the company, presiding.

The secretary (Mr P. Lloyd Hughes) having read the notice convening the meeting and the auditors' report,

The Chairman moved the adoption of the report and accounts. He said: I have the honour to present to you the first annual report and accounts of Morris and Jones (1919), Limited, which, with your permission, we will take as read.

INCREASED TURNOVER.

Like the period of birth, the period of reconstruction has not been without its anxieties. I may tell you that the new company was hardly on its feet when it became evident that from causes previously unforeseen a substantial fall was to take place in the price of goods dealt in by the company, and one result of this fact was that trade, during part of the period under review, was quiet—shopkeepers are naturally shy to buy on falling markets. Our business, of course, depends upon the goodwill of the retailer, and that goodwill can only be maintained by giving "service" and endeavouring at all times to place him in a position to compete with other retail distributive organisations. But as our profits depend to a large extent upon the volume of business done, you will realise that any drop in our turnover makes a serious inroad into our earnings. You are fortunate, however, in the fact that your business is not run by one man—it depends for its success upon the whole-hearted co-working of many men and women, and at a period such as I have referred to this is of inestimable value. The word has only to go out that in the interest of the business this or that is desirable, and we get an immediate response from the department concerned. I am, therefore, able to tell you that in spite of general quietness in our particular trade the volume of the company's turnover has increased, and a fair profit has, in my opinion, been earned.

SPLENDID CO-OPERATION IN ALL DEPARTMENTS.

This, I think, reflects great credit upon each and every individual concerned with the sales organisation, while I am sure they would be the first to recognise the splendid backing they receive not only from the purchase and clerical departments, but also from the warehousing and transport sections, upon whom falls the duty of delivering the goods.

In this business the fact that we all depend one upon the other is daily emphasised, and those responsible for the management of this company have endeavoured to bear that in mind.

We have looked upon those concerned in the business as a large family, whose interests were identical—the success of M. and J. I believe we hold the record in the wholesale grocery trade for long-service men. It was therefore not without regret that, at the instance of the warehousemen's representatives, who asked that a minimum of 16s per day be paid to the men working in our warehouses, that the board agreed to the demand, for it was only possible to do so by making it understood that no man who could not be fully employed could be kept upon the pay-roll. As I have said, we were very sorry that the new arrangement meant turning a large part of our staff into casual labourers—a fact which tends to destroy the happy family idea—an idea which I was under the impression previously commended itself to all concerned; but there it is.

E.P.D. AND DIVIDENDS.

As you will have seen from the report, the whole of the additional capital had not during the period under review become fully productive. The E.P.D. has not only been continued, but increased from 40 per cent. to 60 per cent., and, in addition, a tax known as the corporation tax has been imposed. Of course, neither of these facts was foreseen when the estimate of profit shown in the prospectus was prepared. That the profits for the six months, after providing for all working and management expenses, depreciation, and provision for E.P.D., income-tax, and corporation tax, should be £30,534 14s 4d is, I think, a matter for congratulation.

While recognising that when profits are made ordinary shareholders are entitled to participate in their distribution, the policy of your board—a policy which I feel sure you will endorse—is to build up the resources of the company rather than pay away in dividends the whole of the profits earned, and, with that end in view, they wish to endeavour to write off the preliminary expenses at the earliest opportunity.

FUTURE PROSPECTS.

Prophecies generally come back on one, and I am not going to prophesy; but, as everyone is aware, the present general outlook is somwhat uncertain, and in a business of this kind there are bound to be ups and downs. I hope, however, that when the whole of the capital is fully employed, we shall be able to increase our gross profits—our net profits are, of course, influenced by our expenses. The rise in expenses has been considerable, owing mainly to the heavy increase in wages; but if each member of our staff will try, as I feel sure all will, to remember that what they put into the business is the measure of what it will return to them, then I hope that the final results of the current year will cause us all satisfaction.

You will be interested to know that we are developing our business in Newcastle-on-Tyne area, and, with that purpose in view, have taken over the business of Messrs Thomas Brewis and Son, of that city, and are retaining the services of Mr Brewis as manager.

I now beg to move that the report and accounts be received and adopted, and will ask Mr R. J. Williams to second the proposition, after which I shall be glad to answer any questions which you may desire to put.

MR R. J. WILLIAMS ON THE GROWTH OF THE BUSINESS.

Mr R. J. Williams said: I have very great pleasure in seconding. I do not think it is necessary to add anything to what the chairman has said, but perhaps as the oldest hand in this concern, I may be allowed to say something about the growth of the business. I have been associated with Morris and Jones for close on 50 years. At the beginning our trade was very small. We had then two travellers, whereas to-day we have 77, while compared with the two carts with which we started, we have now a fleet of 24 motor and steam waggons, with 18 one-tonners on order, in addition to a large number of horse vehicles.

These are the days of company flotations; I do not think there has ever been in the history of the world such activity in this direction as has been shown during the past 18 months. Some of them have grown like poplars, but some trees that grow quickly are very little good. The oak, however, takes a considerable time to grow, but becomes one of the strongest and most useful of trees. I take it our business has a similar sound and serviceable growth. It has increased to such an extent that to-day there exist few larger businesses of this kind than Morris and Jones (1919), Limited. To show my confidence in the concern, when practically retiring from business, I left my capital in the company, and I feel sure our customers share that confidence. The company enjoys a reputation for dealing honestly with its customers, and so long as it continues on those lines, so it will continue to prosper.

The motion was carried unanimously.

THE DIVIDEND.

Mr J. Gilbertson then proposed: "That a dividend at the rate of 8 per cent. per annum be paid on the ordinary shares for the half-year ended June 30, 1920." He added that considering the serious fall in prices and the extra expenses with which they had had to contend during the past six months, the management and staff were to be congratulated on presenting such a satisfactory report.

Mr William Cundiff seconded, and the resolution was unanimously carried.

RE-ELECTION OF DIRECTOR AND AUDITORS.

Mr O. W. Owen proposed the re-election of Mr R. Rees Thomas, the retiring director, and this was seconded by Mr A. Johnson, and carried.

On the proposition of Mr W. Moon, seconded by Mr A. Johnson, the following resolution was agreed to: "That Messrs Mann, Judd, Gordon and Co. and Mr H. E. Hughes be, and are, hereby re-elected auditors for the year ending June 30, 1921, and that it be remitted to the directors to fix their remuneration."

Sir John Mann, K.B.E., on behalf of his colleague, Mr H. E. Hughes, and himself, acknowledged the resolution, and said that from some little knowledge acquired of the inner working of the concern he could say that it was an outstanding example of enterprise and caution. The directors had had entrusted to them a fairly large amount of capital, and they were proceeding to invest it in the best possible way. The chairman very wisely declined to be a prophet, but he had very good reason to look forward with courage to the future, because the company was undoubtedly sound, and was capable of withstanding any lean years they might have to confront.

VOTE OF THANKS TO CHAIRMAN, DIRECTORS, AND STAFF.

Mr R. J. Hall moved a vote of thanks to the chairman, directors, and staff for their able management of the affairs of the company,

and to the chairman for his services in the chair at that meeting. Everybody present, he said, would endorse that proposal. One thing had impressed him, and that was the company's transport system. Nothing could give the retailer greater confidence in a firm than the assurance that he could rely upon his goods being delivered expeditiously, and the company had done wisely to equip itself adequately in this direction.

Mr W. Cundiff, in seconding, said the directors had produced a very satisfactory report, and the caution with which they were conducting the business was an assurance to the shareholders that their money was in safe hands. Mention had been made of the excellent facilities for transport; taking another side of the report, reference might be made to the quality of the goods with which the company dealt. Goods liable to adulteration were analysed by the company's own chemist, and everything was done to make certain that the goods offered were safe for food purposes

The Chairman, in reply, said that on behalf of himself and co-directors and staff, they all appreciated the kind references that had been made to them. He hoped the fact that they were taking more than ordinary care in regard to the quality of the goods they handled would materially help in increasing their business, while at the same time they would continue to develop their transport facilities as occasion required.

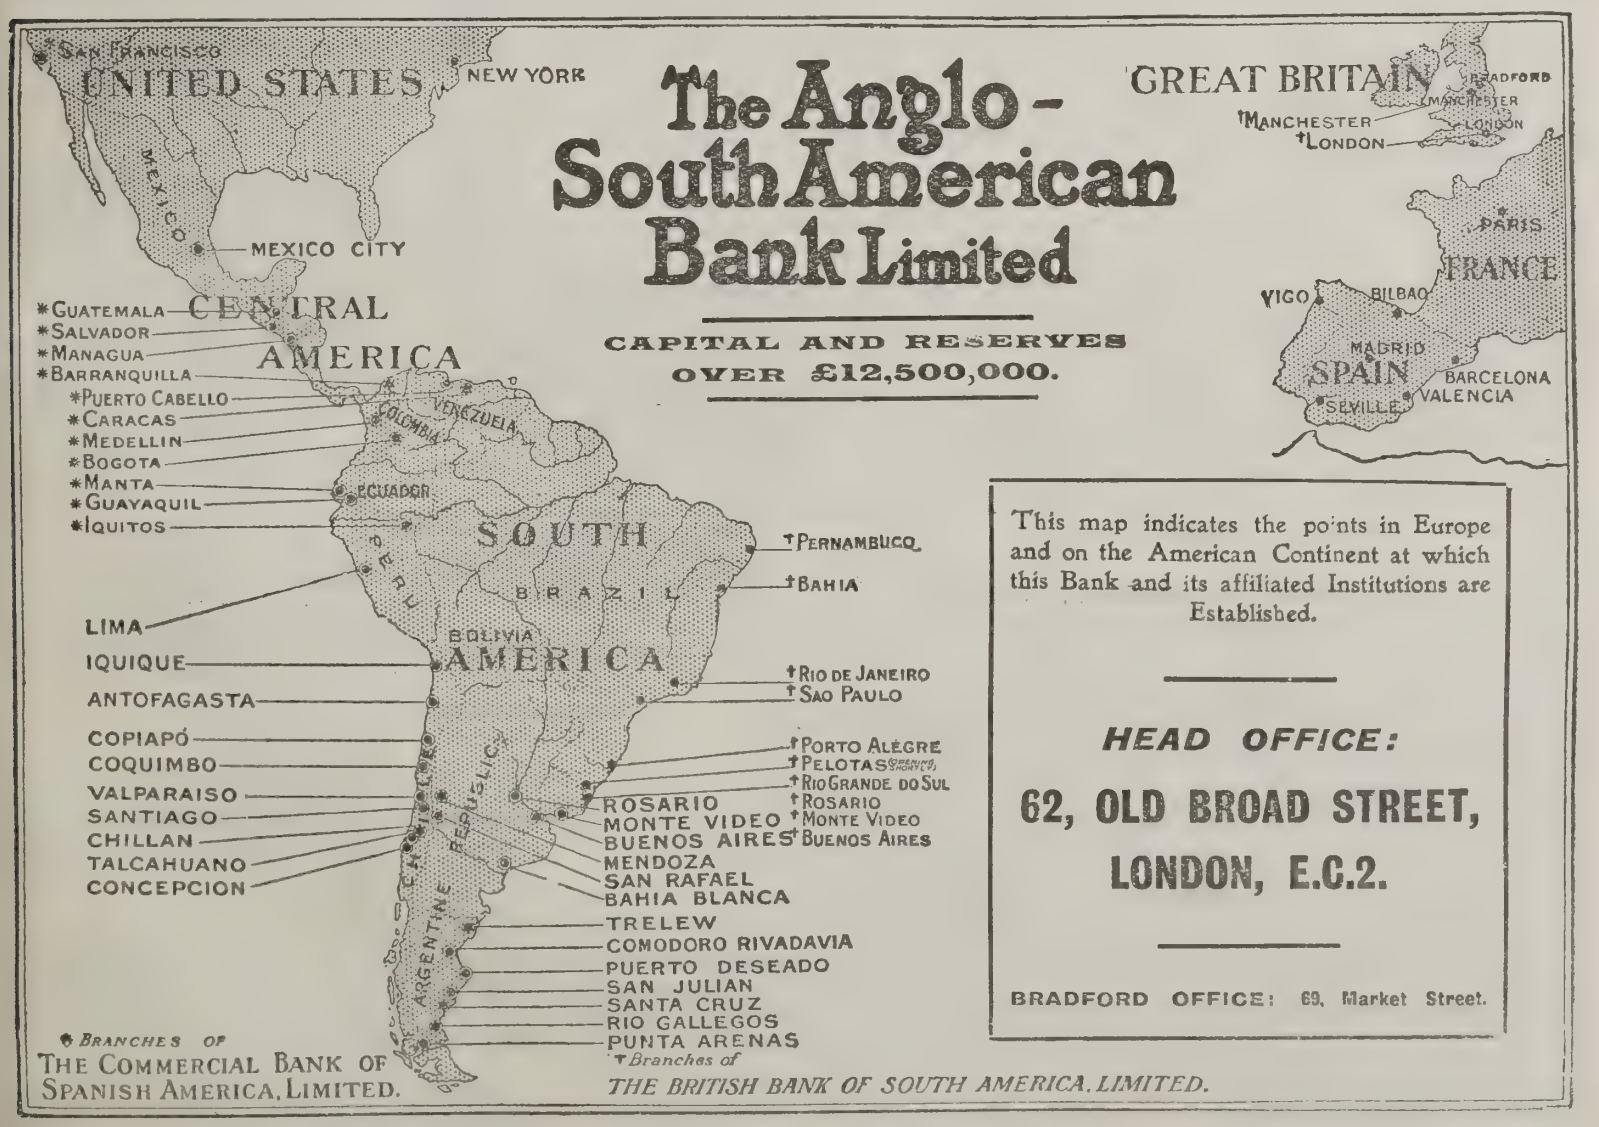
Dividend warrants will be posted on August 31st.

A. DARRACQ AND CO. (1905), LIMITED.

INCREASE OF CAPITAL AND CHANGE OF NAME APPROVED.

An extraordinary general meeting of this company was held on the 13th inst. at Winchester House, Old Broad street, London, to consider resolutions to increase the capital of the company to £3,300,000 by the creation of 300,000 preferred ordinary shares of £1 each and of 500,000 ordinary shares of £1 each, and to change the name of the company to "S.T.D. Motors, Limited." Mr James Todd (chairman of the company) presided.

The Chairman, in moving the resolution to increase the capital, said that the board had concluded negotiations extending over several months between the Sunbeam Motor Company and the Darracq Company for an amalgamation of interests. This amalgamation had been approved by the Sunbeam shareholders, and they now asked for an increase of capital to enable it to be carried through.



ADVANTAGES OF THE AMALGAMATION.

The amalgamation of interests was one which the directors felt they had every confidence in recommending to the shareholders for their approval. The Sunbeam car enjoyed a world-wide reputation, and the works of the Sunbeam Company at Wolverhampton were among the most finely equipped engineering works in this or any other country. The output of complete cars at the present time was far in excess of what it had ever been in the past, and the demand, here and in the colonies, was such as to ensure the sales of the entire production for at least 12 months ahead. The policy of the board would be that the Sunbeam car would continue to be manufactured at Wolverhampton, the Talbot car at the Talbot Works in London, and the Darracq car at the Darracq Works at Suresnes; but a central organisation would be established by which the buying, selling, administration, and advertising departments of the respective companies would be centralised under one head, and in this way very large economies effected. The basis of the arrangement with the Sunbeam Company was an exchange of shares on an equal basis. One ordinary share in the Darracq Company would be exchanged for one ordinary share in the Sunbeam Company, and one preference share in the Darracq Company would be exchanged for one preference in the Sunbeam Company. The proposed amalgamation had been received with unanimous approval by every agent with whom they had come in contact, and it was certain that the position of both companies must be very much strengthened by the joining up of their forces.

With regard to the absorption of the business of W. and G. Du Cros, Limited, the primary reason which had influenced the board was that the body-building capacity of the different works controlled by the Darracq Company was totally inadequate to meet the ever-increasing production of chassis. W. and G. Du Cros' works were very conveniently placed for the Talbot Works. To build and equip similar works at the present time would cost an enormous amount of money and would waste 12 months of precious time. Therefore, the directors were satisfied that they had, by an exchange of shares in W. and G. Du Cros, entered into an arrangement which would be highly remunerative to the Darracq Company.

CURRENT SHARE PRICES.

Dealing with the question of the present-day market value of the shares of the Darracq Company, the Chairman said it was a matter of common knowledge that there had been a serious fall in all shares in the motor industry, largely due to the entire lack of production in this country during the earlier months of the year owing to the moulders' strike, and to the various rumours circulated for many months in connection with certain motor-car concerns. So far as the fall in their own shares was concerned, he knew of no reason whatever in connection with any of the affairs of the different works controlled by the Darracq Company which justified in the least any fall in the market value of the shares. On the contrary, they were now so near the end of the financial year that

he had no hesitation in expressing the board's opinion that, short of some unforeseen catastrophe, there was no reason why they should not be in a position to declare, as a result of the current year's working, the same highly satisfactory rate of dividend, both on their ordinary and preference shares, as that which they had now declared for several years. He was satisfied that he would be doing less than justice to the value of their shares and the general interests of the company if he did not reassure them of the present prosperous condition of the company's affairs. The company had now paid 20 per cent. dividend for several years on its ordinary capital, and 10 per cent. on its preferred ordinary capital, besides accumulating a very large reserve fund. However pessimistic certain people may be regarding the affairs of the future of other concerns in the motor industry, he could certainly say with the utmost frankness that no such pessimism exists in the minds of himself or his colleagues as to the future of your company.

Mr A. Huntley Walker (managing director) seconded the motion, which, after the Chairman had replied to a number of questions, was unanimously adopted.

The resolution changing the name of the company was also carried, and the proceedings terminated.

MAPPIN STORES (BRAZIL), LIMITED.

EXTENSIVE DEVELOPMENTS IN BRAZIL.

The seventh annual general meeting of Mappin Stores (Brazil), Limited, was held, on the 12th inst., at Wigmore Hall, London.

Mr F. H. Richmond, who presided, said: The authorised and issued capital of the company amounts to £150,250, consisting of 146,500 "A" ordinary shares of £1 each and 75,000 "B" ordinary shares of 1s each, all of which rank equally both as regards dividend and return of assets in a winding up. We may congratulate ourselves on having dealt with the very difficult problem of our deferred shares during the past year.

Our turnover during the year was nearly nine times as much as during the first year of the company's existence and over 30 per cent. above the previous year's sales. During the first five months of this financial year our business has continued to increase in an even bigger ratio. Our profit on exchange is merged this year in the net profit on trading of £43,211. At the moment we are able to remit funds from Brazil at an average rate of 14d, but early in the year we obtained an even better rate. Our Brazilian assets are valued at 12d to the milreis, a conservative basis, which we were obliged to adopt in 1915 and which we still adhere to; we have therefore a substantial margin in reserve. All our departments record progress, but in particular I might refer to our furnishing department, which forms an important section of our business, offering great scope for further development. We have every reason to congratulate ourselves on our Sao Paulo establishment, which is now infinitely superior to any other competitive house in Brazil, and we can with confidence look forward to any competition which we may have to face in the future.

The dividends we recommend will amount to £15,963 (after deducting income-tax), of which £5,127 10s has already been distributed by way of interim dividend. This will enable us to put a further £2,000 to reserve and to carry forward £5,761 2s 8d, subject to excess profits duty, which may absorb from £4,000 to £5,000. I might add that in view of the present taxation in this country, and the impossibility of building up adequate reserves, we may be compelled to transfer our interests in Brazil to a Brazilian company, and we are seriously considering this proposition.

Mr Henry Portlock seconded the resolution, adopting the report and accounts and the payment of a final dividend of 7 per cent., making 12 per cent. for the year, which was carried unanimously.

ATLAS SECURITIES COMPANY, LIMITED.

SISAL PRODUCTION COMMENCED.

Presiding at the meeting of the Atlas Securities Company, Limited, Mr Henry Portlock said: The Kedai Estate had reached the producing stage, and a steady and increasing output could be anticipated, which, with economical management, should show a satisfactory margin of profit. Tropical enterprise was experiencing extremely difficult conditions, and the rupee currency, high freights, and depressed produce markets had necessitated the greatest care and foresight. Our property has many advantages, including cheap land, easy transport from plantation to factory and factory to station, and cheap transport to coast, ample areas of suitable soil which conserves moisture, and renders the plant less liable to drought, besides plentiful. Our water difficulty, we hope, is now solved, and our pipe line is completed. Our future developments should be more rapid, and we aim at increasing our Sisal areas to 2,000 acres, planting at least 300 acres annually, and producing ultimately from 600 to 800 tons of sisal per annum. 890 acres are planted, which should be increased to 1,150 acres during the next rains. Sisal was impervious to insect pests and diseases, and he was satisfied that, given moderate freights and the assistance as regards labour which they were entitled to expect from a sympathetic and wise Government, the East African Sisal industry would fulfil his own and his colleagues' expectations, and prove a remunerative investment.

Their capital expenditure was practically completed, and they proposed to write off £5 per ton of the output for development redemption. They hoped to get 2½ tons of sisal per acre, and possibly more, and they estimated that the actual costs per acre of matured sisal had been less than £12 10s, so that the provision they were making would be ample to cover clearing and replanting all cut out areas. Mr E. W. Cowan, the consulting engineer for the company's machinery, who had recently visited Kedai, reported favourably on the appearance and condition of the estate and the factory. Spinners who had used their mark had reported favourably on it, and they hoped to establish their brand as one of the best in the market. He had gone very carefully into the returns and costs at Kedai, and he hoped they were approaching the time when regular dividends could be anticipated. Their manager and staff in East Africa deserve special commendation for the excellent manner in which the factory and plant had been erected and the economical development of the property under very trying circumstances.

† Rates lowered ½% on Jan. 2, 1918, and lowered ½% on Feb. 14, 1918, but raised ½% on Oct. 6, 1919, and ½% on Nov. 6, 1919, and 1% to 5% on April 15, 1920. ‖ Lowered from 3¼% to 3% on June 5, 1918, but was raised to 3½% on July 31, 1919, to 3⅝% on Oct. 6, 1919, to 4¼% on Nov. 6, 1919, and 5¼% on April 15, 1920. * Changed from 4¾% to 4% on Dec. 27, 1917, and from 4% to 3½% on Feb. 14, 1918, at which rate they remained until they were suspended on May 31, 1919. Daily sales resumed on July 14, 1919, when two months' bills were also introduced. The daily sales of two months' bills were stopped on August 15, 1919. Rates commenced on July 14, 1919, as follows:—Two months, 3⅜% (July 14 to August 5, 1919, period of daily sales); three months, 3½%; six months, 4%. On October, 6, 1919, the three months' Treasury bill rate was raised 1% to 4½%, and six months 1% to 5%. On November 7, 1919, the three months' rate was raised from 4⅝% to 5½%, and the six months' rate from 5% to 5½%. On March 19, 1920, daily sales of six months' Treasury bills at 5½% were replaced by twelve months' Treasury bills at 5½%. On April 14, 1920, three and twelve months' Treasury bill rates were raised from 5½% to 6½%. Sales of twelve months' Treasury bills were suspended on April 29, 1920.

Messrs Samuel Montagu and Co. write as follows on August 19th:—"Gold: The Bank of England gold reserve against its note issue is £121,532,565, a slight increase of £2,105 as compared with that of last week. A fair amount of gold came into the market, and was readily absorbed for the United States of America and India. Under date August 12th, Reuter reported that $750,000 gold had been engaged in the U.S.A. for shipment to Bombay. The Indian Government will offer for sale on September 1st and 14th the standard gold equivalent of 12,50,000 tolas of fine gold. There will be no sales subsequent to the last-mentioned date. A new gold coin worth Rs. 35 4a has been minted by the Thibetan Government. Silver: The tone of the market has been distinctly good. India has been a buyer for shipment. There has also been some bear covering. China has taken a fair amount of silver for forward delivery, and has also bought at San Francisco, not on account of any change in the condition of her export trade, but because speculation in exchange is still rife at Shanghai. The upward movement in the gold value of silver militates against the balance of trade moving in favour of China, and the outlook for Chinese commodities in the Western markets as yet shows no improvement, but, of course, it must be borne in mind that the Chinaman is not averse from gambling. There is an apparent check to the advance of the price of silver in the United States. Supposing that the quotation for alien silver rose above a dollar, the supplies might become swollen by the fact that domestic metal would be marketable at a profit over the Pittman price. Hence it is reasonable to expect that except under very strong forces indeed, round about dollar point in America may register the top of the U.S. market. At to-day's U.S. exchange rate—3.61—a dollar price per ounce represents about 61½d per standard ounce. Any serious fall in the U.S. exchange, however, would be more or less reflected by a substantial rise in our silver quotations here, so that to forecast the high-water mark in the London price is equivalent to guessing the lowest possible drop in the U.S. exchange. Continental supplies still arrive, though in not such large quantities as some few weeks ago. The fact that the inquiry for cash silver has been rather spasmodic accounts for the ¼d discount and the ¼d premium which has obtained on different days.

‡ Does not include premium on gold.

Broken Hill Proprietary.—Production report for four weeks ended July 21st; Coke, 20,755 tons; No. 1 blast furnace, 10,310 tons; No. 2 blast furnace, 10,403 tons; foundry furnace, 414 tons; open hearth, 15,985 tons; blooming mill, 14,360 tons; rail mill, 6,487 tons; 18 in. mill, 6,624 tons; 12 in. mill, 2,396 tons; 8 in. mill, 692 tons; rod mill, 4,456 tons.

Burma Corporation.—Bawdwin Mines—Cable: "No. 5 level, rise 1,702 ft. south, from 35 to 50 ft, 26 ozs silver, 31 per cent. lead, 36 per cent. zinc. Lead production for July 2,402 tons gross, from 6,361 tons of lead-bearing material (including secondaries); refined lead production 1,525 tons; refined silver production approximately 190,070 ozs. Smelter operations (July) show decreased production owing to necessary changes account of starting of mill and changes character material handled, but believe that August will be up to record, and September show considerable increase."

Globe and Phœnix.—Cable: "Estimated ore reserves as at June 30, 1920:—Available ore, 54,429 tons, containing 79,471 ozs; ore in pillars, 46,687 tons, containing 81,765 ozs; total, 101,116 tons, containing 161,236 ozs. Value, at standard price of 84s per ounce fine, £677,191." (Reserves at Dec. 31, 1919, 108,182 tons, containing 175,691 ozs; average value, 32·4 dwts.)

Gold Coast Consolidated Lands.—The July output of black tin from this company's Nigerian properties (in which the Tokatea Trust, Limited, holds a 40 per cent. interest) is 4½ tons.

Golden Horse Shoe Estates.—Report for month ended June 30th: Main shaft, 2,780 ft. level. No. 4 lode south drive restarted, and advanced 24 ft. in low-grade material. Total, 1,046 ft. 2,900 ft level. No. 4 lode south drive advanced 31 ft. in lode assaying 17s for full width of drive. Total, 1,039 ft.

Menzies Consolidated.—July:—"Crushed 1,600 tons; value of gold recovered, £2,593, including £300 recovered from slime plant. Expenditure on revenue account, including provision for proportion of taxes and London expenditure, £3,490; expenditure on development account, £375. No. 19 main crosscut attained total distance of 200 ft from main shaft."

Mining Corporation of Canada.—June:—"Total number of standard ounces silver produced, 185,483. Operating cost at mines, £16,249. Special (capital) expenditure, £471. Total footage, 118. Total tonnage, 4,022." (Office note—These amounts have been converted into sterling at the usual rate of exchange, but calculated at the present rate the figures would be higher. The above figures do not include royalties and head office expenses.)

Mount Lyell Mining and Railway.—Cable:—"From July 1st to 28th, inclusive, a total quantity of 12,646 tons of ore treated, being 7,935 tons from Mount Lyell Mine and 3,566 tons from North Mount Lyell, also 1,145 tons concentrates. Converters produced 336 tons of blister copper, containing copper 333 tons, silver 12,885 ozs, gold 402 ozs. Furnace in blast 671 hours."

Mount Morgan.—Cable:—"For four weeks ended July 25th treated 8,929 tons Mount Morgan ore, 481 tons Many Peaks ore. 5,474 tons concentrates, and 4 tons of purchased ore and secondary products. Produced 520 tons blister copper, containing 513 tons copper and 7,670 ozs. gold, including 7 tons copper and 3 ozs gold from Many Peaks; also 1 ton of copper from purchased ore and secondary products. Concentrator treated 15,637 tons ore for a production of 5,625 tons of concentrates, containing 278 tons copper and 4,413 ozs gold. In addition to above production have matte on hand containing 43 tons copper and 645 ozs gold."

Reports and Notices.

Mr Henry Eustace Vickers has been elected as a director of Champion and Slee, Limited, to fill the vacancy caused by the death of Mr W. Cobden-Samuel.

It is announced that Mr George B. Dodwell, having expressed a desire to be relieved of the work connected with the chairmanship of the Malacca Rubber Plantations, Limited, has resigned that office, but remains on the board. Mr Charles Emerson has been appointed

chairman in his stead, Mr J. A. H. Jackson has resigned from the board and Mr John G. Hay has been appointed a director in his place. Messrs Guthrie and Co., Limited, have been appointed agents and secretaries of the company as from October 1st next, and from that date all communications should be addressed to 5 Whittington avenue, E.C. 3.

GOVERNMENT STOCKS, &c.

COLOMBIA (CONSOLIDATED EXTERNAL DEBT).—The Council of Foreign Bondholders have received the August instalment of the debt service in respect of the half-year ending December 31, 1920.

GUAYAQUIL AND QUITO RAILWAY BONDS AND ECUADOR GOVERNMENT SALT BONDS.—The Council of Foreign Bondholders have received the following telegram from their agent at Guayaquil:—"Remitting £17,000 railway bonds." The Council have also received from the Consul-General of Ecuador in London a cheque for £4,000 for account of the service of the Salt Bonds.

REPUBLIC OF NICARAGUA GOLD BONDS, 1909.—With reference to the above bonds, the Council of Foreign Bondholders have received a telegram from the bankers in New York notifying the payment of the August instalment of the Debt Service in accordance with the arrangement of May 25, 1912.

VENEZUELA (3 PER CENT. DIPLOMATIC DEBT).—The Council of Foreign Bondholders notify the receipt of a sight draft for £4,390 15s 4½d, being the moiety of the first fortnightly instalment of the Debt Service payable to the Council in respect of the half-year ending December 31, 1920.

BANKS.

BANK OF BOMBAY.—The report for the half-year ended June 30, 1920, states that there is a profit of Rs.21,66,384, to which has been added balance brought forward, Rs.3,82,339, making together Rs 25,48,723. The directors have decided to apply in payment of a dividend at rate of 15 per cent. per annum, free from tax, Rs.7,50,000; bonus at rate of 5 per cent. per annum, free from tax, Rs.2,50,000; special bonus at the rate of 2 per cent. per annum, free from tax, Rs.1,00,000; transfer to reserve fund, Rs.6,00,000; to credit Government and other securities on account of depreciation, Rs.3,00,000; to pension fund, Rs.1,00,000; leaving to be carried forward, Rs 4,48,723.

RUBBER, &c.

ANGLO-DUTCH PLANTATIONS OF JAVA, LIMITED.—A circular, signed by the chairman, announces the directors' decision with regard to the £1,500,000 paid to the company by the Netherlands Indies Government in respect of expropriation of property and rights. The directors have decided against a cash distribution, and decide to retain the whole amount, and the company is to acquire the whole of the shares in the Sumatra Land Syndicate. The directors also announce their decision to distribute to shareholders a bonus of one new fully-paid share for every two shares now held.

MISCELLANEOUS.

ARGENTINE ESTATES OF BOVRIL.—The report for the year ended September 30, 1919, states that the profit amounts to £93,867, which, added to the balance brought forward, shows a credit to profit and loss of £121,867. The directors recommend a final dividend for 1919 of 1¾ per cent., making 8¾ per cent. for that year, and they propose an interim dividend of 7 per cent. on account of the 12 months ended September 30, 1920. The sum of £20,302, being the final amount of the refund due to the guarantors of the preference dividend, has been put to their credit, while the sum of £4,000 placed to reserve for depreciation, &c., brings that fund up to £56,000.

DUNLOP RUBBER COMPANY, LIMITED. — The directors propose that immediate steps be taken to capitalise a sum of £7,500,000 and to allot to the owners of the £2,500,000 ordinary shares three new fully-paid ordinary shares of £1 each in respect to every one now held. The information placed before the committee appointed to inquire into the value of the company's assets and those of its subsidiary companies was such as to justify more than fully the personal statement made by the chairman at the meeting held on December 1, 1919. Formal notice of a meeting to increase the ordinary capital by £12,500,000, making the authorised ordinary capital £15,000,000, out of which the above £7,500,000 will be issued, is to be given at an early date, and at such meeting full information as to the present position of the company, its policy and development, will be forthcoming.

RYLANDS AND SONS.—The report for the half-year ended June 30, 1920, shows a profit, after provision for excess profits duty, of £253,925 which, with £269,737 brought forward, makes £523,662. It is proposed to declare a dividend at the rate of 10 per cent. per annum and a bonus of £1 per share, both less tax, payable August 21, to place £50,000 to credit of staff consideration fund, and to carry forward £333,662. The shareholders have resolved to increase the capital to £4,000,000 by the creation of 2,000,000 8 per cent. cumulative preference shares of £1 each, and to divide the ordinary shares of £20 into 20 shares of £1 each. The reserve fund stands at £500,000 and the insurance contingency fund at £350,000, making a total reserve of £850,000.

ISAAC HOLDEN AND SONS.—The report for the year ended June 30, 1920, states that, after making provision for excess profits duty and all other charges, and writing off the whole of the mechanics' wages and other expenditure in renewing and repairing machinery, the trading for the past year has resulted in a profit of £97,495, which with £7,094 brought forward, makes £104,589. Income-tax took £23,611, interest on debenture stock £4,900, depreciation fund (making it £180,000) £25,000, directors' remuneration £2,000, dividend on preference shares £7,612, and interim dividend on ordinary shares £5,709, leaving a balance of £35,756. The directors recommend a dividend on the ordinary shares of 1s 6d per share, less tax, making 2s 3d per share, less tax, for the year, transferring to reserve (making this fund £100,000) £17,500, and carrying forward £6,837.

NORMANBY IRON WORKS.—The report for the year ended June 30, 1920, states that the interest received and other income for the year amount to £14,764. Debenture stock interest absorbed £2,286 and directors' fees, general administration expenses and income-tax £1,002, leaving £11,476, which with £1,305 brought forward makes £12,781. The directors recommend a final dividend on the ordinary shares at the rate of 7 per cent., making 12 per cent. for the year, carrying forward £981.

WALLER AND SON.—The report for the year ended June 30, 1920, states that the accounts show a profit of £30,550, and, with £22,215 brought forward, there is a total of £52,765. The directors recommend a final dividend on the ordinary shares, making 7 per cent. per annum, and a bonus of 7 per cent. on the ordinary shares, transferring to reserve fund No. 2 £10,000, leaving to be carried forward £22,022. Owing to the conditions prevailing it has been impossible to carry out the necessary repairs to the various properties and to make the requisite renewals to plant, and the company is, therefore, faced with a large future outlay, and the directors have accordingly made provision for same in the year's accounts. The sum of £1,349 has been paid to the compensation authorities during the past year.

LANCASHIRE AND YORKSHIRE WAGGON.—The report for the year ended June 30, 1920, states that after deducting what is required for replacement of capital invested in wagons, depreciation of fixed plant, tools, &c., and the interim dividend for the half-year ended December 31, 1919, there remains £13,368. The directors recommend a dividend at the rate of 12s per share, less tax, for the half-year ended June 30, 1920, and that £2,500 be transferred to reserve, leaving £6,668 to be carried forward. The total written off for depreciation to date is £41,815, and the reserve account now amounts to £12,500.

MINING.

BROKEN HILL PROPRIETARY.—A cabled summary of the report for the year ended May 31, 1920, states that the net profit amounts to £517,663, after deducting depreciation £73,508, debenture interest £49,427, and sinking fund £53,000. The sum of £377,614 has been expended on plant at the steel works. The profit and loss account shows a credit balance of £528,943. £500,000 was transferred from profit and loss to reserve, which now stands at £1,065,000, leaving a credit balance of £528,943. Liquid assets total £971,560, exclusive of 200,000 shares in the Broken Hill Associated Smelters Proprietary and 720 shares in Zinc Producers' Association. Outstanding debentures at date total £748,100, and the credit balance of the sinking fund is £11,622. From July 1st next redemption of debentures will be effected by drawings.

A DESCRIPTION OF THE MONEY MARKET. By WALTER BAGEHOT. Edited, with a new Preface, by HARTLEY WITHERS. "There is no City man, however ripe his experience, who could not add to his knowledge from its pages."—*Financial News.*

JOHN MURRAY, ALBEMARLE STREET, W.1.

RUBBER OUTPUTS AND DIVIDENDS.

In the table below we give the latest and past three years outputs, and dividends for five complete years of a number of Rubber Companies, while the latest reports of Rubber Companies are analysed under our Summary of Profit and Loss Accounts each week. The latest dividends declared appear under Dividend Announcements, and the Rubber Share Market is dealt with in our Stock Market section. Particulars as to the Market Price of the Commodity and other information will be found in our Produce Market Section.

Name. Year Ends December 31, Except where Stated.	Outputs. Year 1917.	Year 1918.	Year 1919.	Output Month July, 1920.	Increase or Decrease.	Output Seven Months of 1920, Except Where Otherwise Stated in Brackets.	Increase or Decrease.	Dividends Paid in Past 5 Complete Years. 1915.	1916.	1917.	1918.	1919.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Farmers in most districts have been busy harvesting hay and cereal crops. Though weather conditions marked some improvement, same are far from ideal, being unsetteld and overcast with occasional showers. In the North heavy rains were experienced, causing a cessation of farm work. A few weeks of warmth and sunshine would greatly enhance agricultural prospects, and permit of cereal crops being safely secured. Official estimates return the acreage under wheat in England and Wales this season at 1,870,000, which, as expected, shows a decrease on last year. The area under oats is also less than 1919, but barley shows an increase of 127,000 acres. This would point to only a moderate yield of the all-favoured cereal. New English wheat is beginning to make its appearance at the principal centres, condition being variable, but good samples are held for 95s per qr, 504 lbs. Allocations of imported were on a liberal scale; in fact, offerings of some American grades were not all taken up, so that the mills are adequately supplied with grists for the present. Official prices remain unaltered. Shipments were on a lighter scale, as supplies from Australia and Argentina are practically finished, but the movement from America is satisfactory. Crop advices from the United States mentions further damage by rust to the late portion of the spring crop. Official reports of the Canadian crop estimate a yield of 262 million bushels, which would greatly exceed the outturn last season. Further rains have fallen in Argentina, to the benefit of the young crops. Indian prospects are generally maintained, though more moisture is needed in some districts. Favourable reports are to hand from Australia, and with further beneficial rains there is every prospect of good crops. There is a steady inquiry for G.R. flour at 63s 6d per sack, ex mill; but imported grades sparingly offered at 64s to 65s 9d per 280 lbs, ex store. Shipments from North America were exceedingly light, which, however, may be accounted for by Governmental purchases of Chinese at prices which compare favourably with American makes. The announcement that part of the bread subsidy is to be withdrawn from September 1st next, the price of the loaf is expected to be raised by 3d per quartern after that date. Maize opened firm, but subsequently ruled quieter on freer c.i.f. offers. Plate, ex ship, quoted 66s for old, and new shortly due 71s; old crop, landed, 67s 6d per 480 lbs. In the forward market a moderate business was concluded in Plate and European cargoes at irregular and easier prices. Steamers of La Plata, expected loading, changed hands at 67s 6d; afloat, 67s 6d net; early September, 66s. Danube-Bulgarian, August-September, 67s 9d. Bessarabian, August-September, 69s 6d. Danube-Galician-Foxanian, ditto, 68s Parcel trade quiet, with sales of Plate, July-August, 67s 6d; August-September, 64s 6d-63s 3d; September-October, 64s-62s 6d per 480 lbs. Barley quiet, while reservedly offered on the spot. English malting, 80s to 95s; grinding, 78s to 80s. No. 4 Canada Western, 76s, landed; ditto, ex ship, 74s. American malting, 82s; Morocco, 78s, both landed terms. In the forward market several cargoes of European barley changed hands, including Danube-Bessarabian, August-September, 68s; Danube-Bessarabian-Kustendji, 68s 6d; ditto, early September, 69s; September-October, 68s 3d per 400 lbs. Oats quiet, and lower to sell. English whites, 62s to 66s new, and up to 70s for old crop; black Irish, 59s to 61s; Plate, 64s to 66s; American, 66s 6d-67s, landed, per 320 lbs. C.i.f. business dull. Plate, July-August, sold, 48s 3d to 47s 9d; August-September, 47s 6d-48s and 47s 6d per 320 lbs. Beans steady. English, 90s to 105s per 582 lbs; Chinese horse, £16 10s to £17 per ton. Peas quiet. English small blue, 100s to 105s, and Maples, 110s to 125s per 504 lbs. Oatmeal quietly steady. Scottish, £42 to £44; American, £35 to £37 per ton. Homeward grain chartering quiet. From the Danube several cargoes of maize were fixed to U.K./Continent at 60s to 57s 6d, and Mediterranean, 50s per ton. The River Plate section, after being firm with business at 90s up and 80s down river loading, September, subsequently showed a drop of about 7s 6d per ton on these figures. Moderate chartering has taken place from North America. Baltimore to U.K., September, paid 11s per qr, and New York to Emden, 12s; Montreal to U.K. quotes 11s 6d, while from Gulf of Mexico tonnage was placed at 12s to 12s 3d September, and 13s October. A cargo of barley, San Francisco, home, fixed at $30 a ton. India steady, quiet, with 60s accepted on dead weight for a steamer to U.K./Continent. Australia dull at the reduced rate of 130s for wheat and of flour to U.K./Continent. Time charter business neglected, and rates largely nominal.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1919-20, contrasted with 1918-19, 1917-18, and 1916-17.—(Particulars of imports of wheat and flour temporarily discontinued):—

THE IRON AND COAL TRADES.

Our Glasgow correspondent (writing on Thursday) says:—Reports are coming to hand here almost daily of a quietening down in other parts of the country of business in iron and steel manufactures. The run on Scotch pig-iron is as persistent as ever, and hardly any quantity is going out to foreign markets, which for the moment are denuded of supplies. Home quotations vary from 280s to 285s per ton for No. 1 and from 270s to 275s for No. 3, hematite commanding 285s 5d. At the different steel works, which are producing the heaviest tonnage of any district in the kingdom, machinery is still running to its utmost capacity, the greater proportion on ship and boiler plates, and yet requirements are not being fully met. In some relations supplies are so scarce that gangs of men have had to be knocked off temporarily. Several engineers from a like cause, the want of sections, have dismissed one to two hundred hands, and there appears no prospect of an immediate improvement. Many needs are being subordinated to those of shipbuilding, in which no relief is expected for months to come. Boiler plates are fully £31 10s per ton; ship plates £27 upwards, and angles £26 10s. There have been several lots of Belgium steel bars sold locally at over £5 a ton under home figures. Bridge-builders, tube-makers, &c., in heavy lines keep extremely busy, and in addition to their well-filled books are negotiating for several important shipping orders. The coal trade is much disorganised owing to the uncertainty that obtains as to how the miners are going to act over the wages and other questions that are now before them.

Our Middlesbro' correspondent's report, dated August 19th, is as follows:—Pig-iron: The local race week holidays have practically stopped all business of the iron trade. Prices are unchanged at 217s 6d per ton for No. 3 and No. 4 Cleveland foundry pig-iron, and 260s per ton for mixed numbers East Coast hematite for home consumption. Manufactured iron and steel: Steel works have suspended operations for the whole of this week, and advantage is taken of the stoppage to effect necessary repairs. Steel ship plates (home), £23 10s; steel ship angles, £23; iron ship angles, £30 15s; iron bars, £30; steel rails, £23 net. Iron ore: New business is confined to sales of odd cargoes, and the price of best Rubio is now on the basis of 48s, c.i.f., Tees, on 17s parity freight.

MANCHESTER, August 19.

Business throughout the market has been of small dimensions, and nothing has occurred to stimulate buyers to greater activity. Developments, if anything, have caused operators to restrict their activities more than ever. The European political situation still causes a little anxiety, but financial stringency is largely responsible for the lack of enterprise. Miscellaneous sales have taken place in light fabrics for India, but heavy goods remain neglected. Only occasional offers have been reported for China, chiefly in bleaching descriptions. A little more inquiry has been about for Java, Singapore, Egypt the Levant, and South America, but buying has been confined to sorting-up lots, and manufacturers have not secured sufficient orders to improve their position in any way. Here and there very poor prices have been taken by needy sellers. A slack feeling has prevailed in American yarns for home use, and rates have favoured buyers. Very little has been done in Egyptian counts, and easy sellers are increasing in number

THE WOOL TRADE.

Our Bradford correspondent (writing on Thursday) says :—The mills in the Bradford district have been closed this week on account of the annual holidays, and very little new business has been done. There is practically no change in market conditions. South American wool continues to be sold in fair weights on account of the low prices, and there is a certain amount of business in the finer qualities of home-grown wools, but the deep sorts, especially wethers, are neglected. Topmakers' quotations are rather firmer, and many believe that prices of good combing merinos will be well maintained in London next week. Most spinners are ready to consider new business, and in many cases concessions are made where definite orders are concerned. There is still a good deal of irregularity in quotations, however, and the question of price is largely determined by the position of the seller in regard to existing orders. Manufacturers complain about the lack of new business, but in the meantime machinery is well employed.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

During the past week some very favourable weather cables have come to hand from several leading pastoral companies in Australia, all telling of good rainfalls over wide areas. This news indicates that practically the whole of Australia is enjoying a real good winter, and that lambing results should be greatly improved by there being plenty of feed and water everywhere. A correspondent writing at the end of June said that good rains had fallen, and whereas a fortnight earlier good merino ewes could be bought anywhere at 12s per head, the rain had completely changed the aspect of affairs, and merino sheep could not then be bought for £2 per head. The drought in New South Wales and Queensland appears to have been far more severe than was generally believed in England, and according to the last sheep returns the death roll has been heavy in these two States. It is significant that the last returns for the other States show a slight increase, and it is to be hoped that Australia is now in for some good seasons. Sheep statistics in Great Britain make bad reading, the returns published this week for England and Wales showing a further big decrease, hence all the more need for sheep-breeding being vigorously pushed both in Australia and New Zealand.

Next Tuesday another series of Colonial wool sales will commence in Coleman Street Wool Exchange, when about 90,000 bales will be available. From the list of quantities available there should be a good selection of useful merino and crossbred wool, and a very momentous time can be expected at the auctions. As far as one can see the demand will be strongest for good, shafty, warp merinos, but all other descriptions are likely more or less to hang fire. Somehow the trade does not venture to forecast what is likely to happen as in pre-war days, this no doubt being due to the very different conditions which obtain in the textile industry generally. It would make a world of difference to the sales if strong Continental competition could be counted upon, but there is at present little to indicate any real revival in German and Russian buying, and not until there is a broader basis of competition can the auctions be expected to be of that lively character formerly seen.

First hand information from Roubaix states that stocks of wool at that centre are by no means large, but trade has materially fallen off, although it is understood that a little more can be made for tops than in Bradford. The bulk of German mills are running on commission, which, of course, assists the shifting of wool, tops, and yarn. A big business could be done with Germany if financial assistance were forthcoming, but as far as can be seen all financial resources are being taxed to their utmost, and the recovery of the woollen and worsted industries in Central and Eastern Europe is likely to be slow. The political situation is too serious to lead anyone to expect great things from Germany or Russia, hence the forthcoming auctions are not likely to be much different from the two previous series.

OILSEEDS AND VEGETABLE OILS.

(FROM OUR CORRESPONDENT.)

The leading vegetable oils have continued their firmness, prices steadily inclining upwards. Linseed oil especially has been in good demand for industrial consumption, and advanced to £80 per ton for spot and month, ex mill, at Hull, since when, however, the demand having been satisfied there has been some reaction. This is regarded as only temporary, there being evidences of a good market for some time to come. Production is still on modest lines, and supplies of raw material, either in hand or on passage,

THE BANK OF TAIWAN, LIMITED.

Incorporated by the Special Charter of the Imperial Japanese Government, 1899.

Head Office - - TAIPEH, FORMOSA.
London Office - - 58 OLD BROAD ST., E.C.2

BRANCHES: Amoy, Batavia, Bangkok, Bombay, Canton, Foochow, Hankow, Hongkong, Kiukiang, Keelung, Kobe, Moji, New York, Osaka, Semarang, Shanghai, Singapore, Soerabaya, Swatow, Tainan, Tokyo, Yokohama, &c., &c., and Correspondents in every principal town in the World.

The Bank is incorporated by Special Charter of the Imperial Japanese Government, and is authorised to issue its own notes in Formosa, conducts general Banking Exchange Business, undertakes Trust Business, and acts as Business Agents for other Banks. Special facilities are available for Exchange Business on Japan, China, India, Straits Settlements, Dutch East Indies and France, where the Bank has special working arrangements with Cox & Co. (France) Ltd. Deposits are received for fixed periods on terms which may be ascertained on application.

are not by any means excessive. Some revival in buying seed has to be noted, early shipment Plate and near Indian being in good request. At present, however, only about 11,000 tons of linseed are afloat for the U.K. and 13,000 tons for the Continent. Considerable quantities both in India and the Argentine are awaiting shipment, but shippers' prices still appear to be rather above the heads of importers on this side. As indicated some weeks ago, there is no suggestion of a coming shortage of linseed to meet all the world's requirements in the next six months.

Cotton oils have continued in good request, and there has been active purchasing for August, September, and October delivery at enhanced prices, crude Egyptian now fast approaching £70 at Hull mill. Sellers' existing stocks have been practically all disposed of. Arrivals of Egyptian seed are better, but shippers are slow to offer, and quotations for shipment are higher. Plenty of Indian seed is, however, available. With regard to soya bean oil a good trade has been done by re-sellers at under manufacturers' prices. Palm kernel and ground nut oils are firm in sympathy with other edible oils.

The imports of oilseeds, oilnuts, and kernels into the United Kingdom in July aggregated 96,712 tons, the lowest monthly total recorded this year, and comparing with an average of 119,972 tons in the first six months of the year. For the seven months to date the arrivals are 815,764 tons against 736,343 tons in the corresponding period of last year.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The decision of the Government to lift the embargo on export of hides—the same coming into force to-day (Thursday)—has at once re-acted on the home market, and at the Bermondsey auctions advances were secured. Best ox made 12⅞d-13¼d, an advance of 5/8d to 1d on last week's prices. Best cows made 9⅞d-10¾d, an advance of ⅜d-¾d. Calf also shared in the rise, most classes advancing ¼d-½d. Sheep skins were weaker, and declines of 9d to 18d were registered. There has been a better tone in the foreign hide market, and large transactions are reported to have been done in the River Plate on American and British account—in fact, sales of 150,000 frigorifics are reported to have been made on a basis of $53½.

The slump in the leather trade appears to have reached bottom, and inquiries have been frequent in Bermondsey this week. The limitation of input of hides is already being felt, and stock of bonds from domestic hides are getting limited. Bends of 12-14 lbs have been the best sellers, but dry hide bends have not been wanted, as the cost of labour is so heavy in the shoe trade that poor material hardly pays a good-class manufacturer for working up. Bellies and shoulders are bad sellers, and bargains are often being picked up. In rough dressing hides there is nothing doing, and Walsall curriers are finding the lack of orders very badly. Upper leather is a shade better, but it will be some time before the demand is equal to the supply, and tanners are getting anxious sellers at reductions.

In the boot trade short time is the rule, makers of better-class goods being the only section at all busy.

Harness makers and saddlers are also slack, and there is very little doing in travelling requisites.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, August 20.

During the period under review, there was only a moderate amount of trade in force with regard to the leading commodities, and in some directions slight irregularity predominated. A good continental demand continued for desiccated coconut, and, with stocks in London now showing marked diminution, prices further hardened. Rubber was also influenced by improved buying orders, and some sentiment was shown over the fact of American inquiries being in the market. Apart from some inquiry for old crop jute to near continental destinations, all fibres remained in a quiet and rather uninteresting state.

SUGAR.—Market unchanged, with fair allotments made this week. Free parcels for manufacturing purposes still very quiet, with actual dealings quite retail in extent. American granulated, 138s; white Mauritius, 134s; crystallised West India, 120s to 125s. American syrup dull, and business only possible where sellers were willing to grant a concession in price. Honey quietly steady. Liquid glucose, 57s 6d.

COFFEE.—A quiet market again resulted, though the finer qualities of Costa Rica engaged fair attention. Fair to good bold Costa Rica sold, 146s to 149s; Uganda, bold sizes, sold, 90s 6d to 103s. The terminal market ruled dull and easier. Limited transactions included December, 70s 6d.

COCOA.—Market still generally idle, and quite featureless.

TEA.—There was a good steady demand for all good to fine qualities, but poor and thin liquoring descriptions experienced a quiet trade, and rates disclosed some irregularity. During the week, 37,000 packages Indian and 36,100 packages Ceylon were catalogued.

RICE.—Steady absorption still takes place on continental account of two stars Rangoon at official rate. Rangoon bran quiet, steady.

SPICE.—A better demand prevailed for pepper, and market ruled steadier. Fair b ack Singapore, spot, sold, 6⅛d to 6½d; September-November, 6½d to 6⅝d; October-December, 6½d to 6¾d. Aleppy, spot, sold, 6¾d; Lampong, 6¾d; Tellicherry, 7½d; white Singapore, 1s 1d; ditto, September-November, 1s; Muntok, spot, 1s 3d; and September-November, at 1s 0¼d to 1s 0½d. Zanzibar cloves, spot, 1s 6½d to 1s 7d; pimento, 4d.; tapioca steady. Fair flake, spot, sold, 2½d; ditto, September-November, at 23s 6d to London, and 24s 6d to Marseilles. Fair Penang seed, spot, sold, 26s 6d; small sago, August-October, sold, 33s; sago flour, August-October, sold, 20s 6d to 21s 6d. Farina, spot, 32s 6d; ditto, August-October, sold, 30s to 30s 6d. Desiccated coconut, fine cut, spot, sold, 85s; medium, 95s to 97s 6d.

JUTE.—Only a small business was effected, chiefly in parcels lying at Hamburg and Antwerp, the market being very quiet and easier as far as the U.K. market was concerned. Native firsts, actuals, assortment, August-September, sold, £44 to £43; subs, ditto, £41 to £40; new crop, actuals, August-September, £48; subs, ditto, £46 10s to £46. Hessians and twills dull, unaltered.

HEMP.—Manila steadier during the week, with a fair demand. J Grade, August-October, sold, £64 to £64 10s; K ditto, £54; L, spot, at £54; ditto, August-October, £53 10s. New Zealand quiet, and spot lots of points, sold, £53 10s.

SHELLAC.—Market steady on spot, but rather irregular forward. Fair T.N., spot, sold, 670s to 675s; August, 635s; and October, 600s to 610s, and 605s.

COPRA.—Market opened quietly, but became firmer during the week. F.M.S. Straits, August-October, sold, £54; September-November. £54 10s to £54 15s; October-December, £54 10s to £55 10s and £54 15s. Ceylon, August-October, sold, £54 10s; October-December, £55 10s. F.M. Straits, August-October, Marseilles, sold, £52 10s; ditto, Rotterdam, £53 5s. F.M.S. Straits, August-October, Antwerp, £54 5s. Palm kernels firmer. August-October sold, £36 10s, £36 15s; and October-December, £36 15s to £37, and £36 15s, since at £37.

EGG PRODUCTS.—Liquid yolk, prime old season's, spot, sold, 100s; August-October, 105s per cwt. Dried yolk, spot, done 11d; albumen at 4s 11d; and September-November, 4s 9d per lb.

RUBBER, after being firm and dearer, assumed a quiet and weaker tone. Plantation crepe, spot, sold, 1s 11½d to 2s 0⅛d and 1s 10⅜d; October-December, 2s 0½d to 2s 1¾d and 2s 0¼d; January-June, 2s 2½d to 2s 3½d and 2s 2d. Sheet, spot, sold, 1s 9⅜d to 1s 10¾d and 1s 9½d; October-December, 1s 11¼d to 2s 0¼d and 1s 11⅛d. Fine hard Para, spot, 1s 9½d.

OILS.—Linseed irregular but firmer. Spot, net, naked, 82s; September-December, 78s. Rape quiet. Crude, spot, 73s; refined 80s. Cotton dearer. Crude Egyptian, 69s; Bombay, 59s; refined edible, 87s. China wood firm. Hankow, spot (barrels), 108s; July-August, 100s; and Hong Kong, spot, 104s. Palm kernel firm. Crushed, spot, 78s; extracted, 77s. Palm firm. Softs, July-August, 61s 6d; Lagos, 62s 6d. Coconut dearer. Ceylon, spot, sold 89s; August-October, 87s; Cochin, ditto, 96s. Soya firmer. Oriental, afloat, 75s; August-October, 76s; deodorised, 90s. Japan fish firm. August-October (cases), 45s. Cod liver steady. English, spot, sold, 50s. Groundnut firm. English crushed, naked, spot, 82s; deodorised (barrels) 100s. Turpentine opened easier, but improved. American, spot, 144s 6d; August, 144s 6d; September-December, 146s 6d. Rosin slow. American, grade B, 45s; F, 56s; G, 56s; K, 57s; M, 57s 6d; WW, 59s; French, F/G, 53s; H, 53s; WW, 54s; extra pale, 55s. Petroleum steady, quiet; American, spot, 2s 1⅛d; and water white, 2s 2⅜d per gallon.

OILSEEDS.—Linseed market firm. Calcutta afloat sold, £38 5s, £38 10s, £38 15s; August-September sold, £38 5s to £38 10s, £38 15s; Bombay, September-October, £39 10s: Plate afloat, Hull, sold, £35 10s; August-September, £35 5s. Rape-seed active and dearer. Toria, August-September, Hull, sold, £33 5s to £33 15s; real bold Ferozepore, £32 10s; brown Cawnpore, £31 10s. Cottonseed firmer. London Egyptian f.a.q., spot, £18 10s; September-October, sold, £18 10s; Bombay, spot, old, Hull, £12; ditto, new, £13 5s; August-September, £13 5s. to £13 15s. Castor seed inactive. Bombay, July-August, Hull, sellers, £28. Gingelly firmer. Chinese, afloat, to Continent, sellers, £47. Groundnuts firm. Chinese, dry decorticated, July-August, £37 10s per ton.

METALS.—Tin occupied quiet attention, and rates moved in a downward direction until the middle of the week under realisations, cash declining to £274 (but improving to £275), late October to £278 15s, and three months' to £280 10s, while since registered at £281 10s. At Thursday's market dealings were very limited, and mostly confined to cash at £276, late August £275 10s, and three months' at £283 to £282.

LONDON MANCHESTER GLASGOW

(*Continued from page* 319.)

Friday's market manifested weakness, cash being registered at £270 10s to £270, three months £280 to £277, and finally at £279. English ingots, £269 10s to £270 10s. Copper: The standard market eased until Tuesday, cash declining to £93 10s, and three months to £95 5s, but an improvement characterised movements at the middle of the week, prices in these positions advancing to £94 2s 6d and £95 15s respectively, while values again relapsed on Thursday, cash being registered at £93 15s to £94, early September, £94 5s, and three months at £95 10s to £95 5s. At Friday's session, the tendency was inactive, values being little changed, with business in cash at £93 15s, and three months, £95 to £95 10s. Electros, £111 to £117. Aluminium: Home trade, £165; export, £185 Antimony: English regulus, ordinary to best, £52 to £55. Lead rather easier at £35 15s to £36 5s. Spelter quieter at £41 2s 6d to £42 12s 6d. Wire bars quoted at £114 to £118.

TALLOW.—Messrs Colchesters and Woolner write as follows on August 18th:—The tallow market was steady during the week, but prices declined 1s to-day. The home trade is still quiet, and the recent rise has checked the export demand for the moment. 5,000 tons were shipped from Australasia in July. At auction to-day 1,883 casks tallow were offered, and 691 were sold. Quotations are:—Australian mutton: Fine, 80s; good to fair, 78s to 76s; dull to dark, 71s 6d to 67s 6d; hard, 79s. Australian beef: Fine, 80s; good to fair, 77s to 76s; dull to dark, 70s to 62s; sweet, 80s. Present shipment from Australasia: Mutton, fair coloured, 48 degs, 78s; and mixed, 43½, c.i.f., London, 75s. The market letter is unchanged. Town tallow, 70s per cwt. Rough fat per 8 lbs, 10d to 1s 6d; melted stuff, 54s per cwt. Quotations are:—Town: 68s net cash, naked, ex works. Country: Frail casks, 60s; home melted, shipping casks, net, f.o.b., good coloured, none; fair to dull, 70s to 65s. Bone fat: White, none; pale, 65s; benzine, 60s; melted stuff, 60s, f.o.b.

THE MONEY MARKET.

MONEY has been decidedly scarce, owing to the demands usual at the end of a month and the contraction in credit effected by the repayment of Ways and Means advances. Considerable sums have been lent by the Bank of England at 7½ per cent., and loan rates in the market have been firm at 5½ per cent., higher rates being occasionally paid in order to avoid applications to the Bank. Discount rates were firm, but the prospect of easier money next week owing to Victory bond interest and redemption stimulated the demand for bills in some quarters.

* * * *

The Bank return was favourable. It showed a decrease of £53,000 in the stock of gold and an increase of £48,000 in the circulation, and a consequent decrease of £101,000 in the Reserve. Its chief feature was a reduction of nearly 17 millions in the Government securities, due to the liquidation of advances from the Bank to the Treasury. There was also a small decline in the Other securities, in spite of the market's borrowings. The total deposits thus declined by 17¼ millions, Other being 16½ lower. The currency notes circulation declined by £2,400,000 to £356,012,200, which includes £4,922,789 for notes called in but not yet cancelled. The fiduciary issue is £308,912,200, or £11,687,800 below the maximum.

* * * *

The following table shows Public Income and Expenditure for the week ended August 21, 1920 :—

Receipts.	Mln. £		Expenditure.	Mln. £
From Revenue		27·600	Supply Services	13·280
Less—			Interest on Debt	1·828
Added to Exchequer balances	Mln. £ ·808		Sundries	·710
Reduction of Debt	10·974			
		11·782		
		15·818		15·818

These operations reduced the debt by a sum of £10,974,291, and caused the following changes, which are reflected in our table of National Debt given in another column :—

	Mln. £		Mln. £
Treasury Bonds	+ ·155	Bank of England Advances	— 26·750
National Savings Certificates	+ ·50	Surrenders of Bonds, &c.	— 1·195
Treasury Bills	+ 12·406	Sundries	— ·90
Advances by Public Depts.	+ 4·450		
	+ 17·061		— 28·035

Property and income-tax yielded £5,213,000, while Customs and Excise contributed £13,833,000. Excess profits duty brought in £5,723,000. The floating debt was reduced by £10,036,000.

* * * *

* * * *

For the foreign exchange market the week has been difficult and exciting. At the beginning dollars fell away slowly but steadily, while francs rose in the same way. At one time on Wednesday New York was quoted as low as 3·55, and francs had risen to over 52. During the day there was a sudden reaction, large offers of dollars coming over from Paris, and francs getting rapidly more difficult to obtain. By the end of the day dollars had risen to 3·57 and francs fallen to 51.05. On Thursday the market was uncertain, dollars at one time being up to 3.60 and francs down to below 51, standing at the close at about 3·58½ and slightly over 51 respectively. Yesterday dollars again fell to about 3·57½, as compared with 3.59 last week, and francs rose to about 51.10, as compared with 50.50, the general tendency being weaker both for sterling and francs. The sudden change on Wednesday came without warning, and little reasonable explanation for it has been supplied. The movement would appear to have begun in a demand from New York for francs on rumours of the settlement of arrangements for a new French credit in the U.S.A., and the optimistic feeling which resulted was strengthened by the rapid successes of the Poles. For forward purchases the spread has widened, francs being 15.20 centimes per month below spot prices as compared with rather under 15 centimes a week ago, and dollars nearer 1½ cents than 1 cent per month above. The movement in marks has also been more violent than in recent weeks, the rate rising from 179 last Friday to about 186 on Monday, and falling away again rapidly to 176 yesterday. Futures remain at ¼ mark per month below spot. Brussels, on the whole, has moved with Paris, but at 48.05, the margin between the two rates was yesterday only 3f 05c as compared with 3f 10c a week ago and 3f 20c a fortnight ago. The Italian lira, while following the same general tendency, was slightly lower yesterday than the week before, showing at least that for the time being rates have again been got in hand. The outstanding feature among neutral exchanges has been the relatively rapid rise in the florin, which seems at the moment to have broken away from the fixed ratio to the dollar, which has been maintained for so long, and yesterday had reached 11.25 as compared with 10.97 a week ago, futures remaining unchanged at 3.5 cents per month below spot prices. It is probable that heavy grain purchases and the slackening of sugar sales may have played a part in this movement. Madrid has gone a few centimes against us on the week, while Switzerland, after some slight but erratic movements, has ended up very much the same as before. Christiania and Copenhagen have again moved well in our favour, and Stockholm also is slightly higher, the financial position in all the Scandinavian countries showing no improvement. The value of the Finnish mark is somewhat improved, but the Austrian krone is again worth less. After falling away considerably at the beginning of the week the price of silver has again somewhat recovered, but was slightly lower on the week as a whole. Rupees have remained steady, while Shanghai dollars are 1d dearer at 6s, Hong Kong 1d cheaper at 4s 3d.

EVENTS OF THE WEEK.

AUGUST 21ST.—Poles occupy Soldau. Syrian Premier and Ministers murdered. The first Secretary of Mines appointed.

AUGUST 23RD.—Miners' ballot begins. Poles report capture of 35,000 prisoners and 200 guns. British Note sent to Moscow.

AUGUST 24TH.—British Association meeting opens at Cardiff. United States exchange down to $3.55½. Poles report prisoners reach 70,000.

AUGUST 25TH.—Rioting in Belfast. United States exchange at $3.59¼. Receiver appointed for Bethlehem Motors Corporation.

AUGUST 26TH.—African Banking fusion announced. Polish Government issues statement of peace aims. Russian note to England withdrawing stipulation in peace terms for Polish Civil Militia.

LABOUR'S AMBITIONS.

THERE are many reasons for welcoming the crisis that is approaching in industry owing to the action of the coal-miners' leaders, for whether the strike does or does not happen—and the omens are favourable to peace—the crisis will have taught the whole community a lesson which it has to learn before it can get to work as it ought to be working. In the *Economist* of July 31st we dealt with the miners' claims, and showed that though they were by no means as unreasonable as some critics have maintained, the Government was fully justified in resisting them. Public opinion, ignoring the bait of a lower domestic price held out to it, is strongly against the strike, and it is clear that the workers in other industries are naturally apprehensive of its effects on their own position. Mr Clynes has already suggested a way out through a public discussion, and there is good reason to hope that the miners' leaders will see themselves that a strike which could not fail to have a disastrous effect on the country's industry, at a most critical time in its history and that of the rest of the world, is not a good way of securing nationalisation, which they can win at the next General Election through the ballot-box if they can persuade a majority of the citizens that it is desirable. If the worst happens, and the expected vote in favour of a strike takes shape in action, then the lesson taught will be terribly severe for all classes, especially the poorest; but we hope and believe that the necessary lesson will be learnt by milder means. This lesson is the simple economic platitude that we cannot enjoy wealth that we do not produce. It is plain, of course, to the Labour leaders, many of whom have spoken strongly to that effect, but nevertheless there seems to be a widespread belief among the rank and file of the wage-earners that they can make themselves better off by producing less and demanding higher wages. The result is that the higher wages have less purchasing power because there are less goods to be bought with them. This result is inevitable unless the wage-earners can force the organiser and shareholder to take a smaller profit. They believe, and with good cause, that in the past profits have been too high and labour's share too low, and they know that whenever they have demanded improvements in their wages and conditions short-sighted employers have resisted on the ground that industry could not stand them, and that industry has subsequently shown that it could do so quite well; and so they are quite reasonably sceptical when they are told that their present ambition cannot be granted.

Labour's claim for a bigger share of the output that it produces with the help of capital and management has the hearty sympathy of those who take a broad view of the country's interest. It does not pay us as a nation, or befit us as pioneers in civilisation, that those who do the hard and dirty work of industry should be underpaid as they too often were before the war. But Labour cannot get more if it produces less, because management and capital must have their wage, under whatever economic system we are going to work, and as long as capital is privately owned there is only one way of making it take a lower wage, and that is by encouraging it to be plentiful instead of by threatening it and terrifying it and taxing it until those who ought to save it are frightened into spending their money on immediate enjoyment. If it be true that the majority of the wage-earners are disgusted with the present system and will not work well for private capital, it is certainly in their power to make the present system impossible. But it is by no means certain that this is so. We can hardly believe that they are charmed with their experiences of bureaucracy during the war, and as the September *Round Table* observes, "nationalisation means bureaucracy and nothing else, for no one has yet suggested an answer to the riddle, 'When is a Government Department not a Government Department?'"

All who sympathise with Labour's legitimate ambitions will therefore welcome a crisis which seems likely to bring home to the wage-earners (and probably by mere recognition that a strike would now do them much more harm than good) the fact that they cannot now improve their position by demanding and enforcing high wages, which are rendered nugatory by lack of goods to buy. If this lesson can be taught, and if Labour will first deliver the goods, and then insist on a better share of them, there never was a time when there were greater opportunities for its progress. It has enormous political power if it knew how to use it, and public opinion is now always inclined to be on its side when it can show anything like a case or a grievance. But it has to unlearn many beliefs that oppose its progress, some of which have been hammered into its mind by the action of short-sighted and greedy employers in the past. Among these are the view that it pays it to work slowly and irregularly so that there may be more work to go round, and that piece-work and payment by results are not to be encouraged. In the case of coal the fallacy of low output is particularly obvious, because scarcity of coal tends to cause unemployment in most other industries and has a disastrous effect on our export trade, and so on our power to buy food and materials abroad. But what is true of coal is true in a less degree of nearly everything else that is produced. Goods are produced to be sold, and the money that they fetch buys other goods, and so production of goods that are wanted means demand and demand means employment. If they are produced in small quantities or at such a price that they cannot be sold, there is a check to demand, such as is visible now, and lessened demand tends to mean unemployment. As to payment by results, the notion that a man should be paid the same whether he works well or ill might be attractive from certain points of view in a world so well supplied that it could afford it; but if virtue is under present circumstances to be its own and only reward, our needs are not likely to be well supplied.

Surely it is high time that we gave up the view that fighting over an inadequate product is the best way to prosperity. The world is crying out for our goods, if only we will turn them out at a price that it can pay. Wage-earners help to make the price impossible by demanding more than industry can stand, the well-to-do, crushed bytaxation and terrified by Labour's demands, cannot furnish the capital that is needed to set international trade on its legs again, and our rulers cannot even make peace, reduce expenditure, and set about the real problem of increasing the country's output by abolishing controls and restrictions. We seem to forget that there is a world problem almost as urgent as the one that we recently solved on the battlefield. American

observers talk politely of the progress that Europe is making. Mr Otto Kahn, in a pamphlet entitled "Impressions of a Journey in Europe," says that the internal problems of Britain, France, and Italy are solved or in course of solution. Mr Albert Breton, of the Guaranty Trust, in an article on "Europe's Recovery," reprinted from the *Trust Companies' Magazine* of July, tells us that "we cannot fail to have faith not only in Europe's ability to recover fully its material losses, but also to create a greater and more prosperous Europe." The Mechanics and Metals National Bank has added to its excellent series of pamphlets one on "America's Opportunity," calling on the United States to take part in the great task of reconstruction. But we shall not encourage America to believe in Europe's recovery or to give material assistance to help it, if war and the war spirit mar our international relations, and if Labour tries to found a new world on a higher price for slack and grudging work.

THE NEW DEPARTURE IN EGYPT.

THE scheme provisionally agreed on between the Milner Commission and the Egyptian Nationalist leaders is a bold and hopeful attempt to fulfil the promise of autonomy and independence under British supremacy made in Lord Allenby's Proclamation nine months ago. That consummation has been our ultimate goal since France and Russia, disbelieving in our sincerity, induced Abdul Hamid to reject the Wolff Convention of 1887, under which our troops would have been withdrawn in 1890. Thereby they prolonged our occupation indefinitely; and latterly a number of unfortunate circumstances and misunderstandings have set up an estrangement which the scheme bids fair to heal. Egypt is to be raised at one bound from the status of a Protectorate to that of an ally, subject only to a limitation of her treaty-making powers, to the advice and partial control of a British Resident, and to safeguards for the Debt and the Suez Canal. She is to be represented abroad, chiefly at first for commercial purposes, by her own Ministers. She is to be freed from the Capitulations, which hamper her legislation and her internal finance. The rights of foreign residents are to be safeguarded by the veto of the Resident and by the Mixed Tribunals; the British garrison is only to protect the Suez Canal. Only in case of war has Great Britain the right of re-entry, and the Advisers of the Ministries are to be withdrawn. Besides the Resident, only two high British officials will be left—one to supervise legislation affecting foreigners, the other in charge of the Debt. A Treaty of Alliance is to be worked out on these lines, and a Constitution voted by a new Legislative Assembly; and then the whole scheme is to be submitted to that Assembly and to Parliament. The work will be lengthy; there may be interruptions, and its achievement depends on consent to the abolition of the Capitulations on the part of the Powers concerned. But those of them who would before the war have been recalcitrant are now either powerless or allied with us. Our own ultra-Imperialists will protest in vain; and Egypt, though there may be opposition from extreme Nationalists and extreme reactionaries, is not likely to reject so complete a concession.

In the masterly work just published, and reviewed on a later page, Sir Valentine Chirol has shown how the estrangement arose. The high ideals of Lord Cromer's rule have been observed; the British officials had become more numerous, and collectively less sympathetic. Sultan Abbas, educated in autocratic doctrines in Vienna, diverted the Legislative Assembly into ultra-Nationalism; the term "Protectorate" and its Arabic equivalent were misleading; the methods of requisitioning war supplies and of recruiting the Labour Corps through the village headmen by virtual conscription were irritating; the tone and manner of the British proposals for constitutional reform gave offence, and Egypt was treated with less consideration at the Peace Conference than Syria or the Hedjaz. The deportation of the Nationalist leaders set up a rising, followed by passive resistance; and the high prices of food increased the unrest. But the Mission, we may hope, has solved the problem. Of course, Egypt may go back for a time. The Civil Service can hardly at first be so efficient; *backsheesh* is only too likely to be influential; the Copt, Syrian, and Armenian minorities may suffer; so may education and hygiene—though the Nationalists talk much about them—and also archæology; and the Legislature may fail to protect the landless and much-indebted sections of the fellaheen. But Egypt is not likely to be industrialised, and her stability should be assured by her multitude of small landholders. For progress we must trust to the national pride of the more enlightened leaders.

The bondholders seem to be fully safeguarded under the scheme. Three Turkish loans are secured on the Egyptian tribute, and Great Britain has assumed responsibility for them under the Turkish Treaty of Peace. The bonds of the earliest, the 4 per cent. of 1855, now amounting to £T4,196,720, have all been drawn, but there have been no repayments since 1875. It is also guaranteed by France and secured on the Cyprus tribute and other Turkish revenues, doubtless to be readjusted in the coming settlement of the Turkish Debt. It seems to be thought that its repayment may now be accelerated, and so perhaps may that of the two others—the 4 per cent. of 1891 (now £T5,532,912) and the 3½ per cent. of 1894 (now £T7,312, 118), which would ordinarily be completely paid off in 1951 and 1956. Of the three Egyptian loans proper, the amount of the 3 per cent. Guaranteed of 1885 outstanding is £6,288,900; of the 3½ per cent. Preference £31,127,780; of the 4 per cent. Unified £55,971,960. All these are now secured on the land tax, which produces some 28 per cent. in excess of the amount needed for their service, and are further protected by the reserves of the Caisse de la Dette. An additional security is that the great landowners, enriched by the cultivation of cotton, have invested largely in them. The Sudan apparently stands outside the scheme, and is not likely to be given up. Its one loan is a purely British obligation. Selling of Egyptian bonds has been reported from Paris; but there seems to be no reason for it, or for the comparatively low present prices of the loans.

SOUTH AFRICAN CURRENCY.

THE monthly review of the Standard Bank of South Africa, dated July 31st, gives particulars of the more important provisions of the Government Currency and Reserve Bank Bill, which has now been duly passed. We summarise them as follows:—

1. Gold Certificates.—The Treasury will receive deposits of gold or gold bullion at the mint price and issue certificates against it, which are to be legal tender up to their face value, and are redeemable in gold or specie on demand, except when the market price of gold in the Union exceeds £3 17s 10½d per ounce, when the Governor-General may suspend their convertibility by proclamation. Whenever convertibility is so suspended, as it will be when the Act comes into force, the Treasury may require each bank transacting business in the Union to deposit the whole or a portion of the gold coin held by it in exchange for certificates. These provisions shall not remain in operation after June 30, 1923.

2. Central Reserve Bank.—A body to be called "The South African Reserve Bank" will be established with an original capital of £1,000,000, of which not more than 50 per cent. shall be subscribed at par by the existing banks in proportion to their paid-up capital and reserve funds. The balance shall be offered to the public at par, and any amount not subscribed by the public shall be taken up by the Treasury. The bank may issue notes and accept money on deposit on current account for public corporations or private persons; buy, sell, or rediscount commercial bills or promissory notes with two good signatures and not more than 90 days' currency; one-fifth of such discounts may consist of bills or notes drawn against agricultural produce or livestock; and it may buy, sell, or rediscount bills of exchange with a maturity not exceeding 90 days endorsed by a bank and drawn for the purpose of carrying or trading in Union Government securities. It may not accept money on deposit for a fixed term or allow interest on current

account credit balances. It will have the sole right to issue notes in the Union for 25 years from the commencement of the Act, but until it is in a position to issue its own notes the existing banks may continue to issue notes against gold specie to an amount not less than 40 per cent. of such notes. The reserve banks notes will be secured to the extent of not less than 40 per cent. in gold and as to the remainder in commercial paper or trade bills. The bank is to hold in gold or specie a reserve of at least 40 per cent. of its deposits and bills payable in addition to the gold reserves required against its note issue. Every bank transacting business in the Union will be required to keep, in addition to its gold reserves against notes issued by it, reserve balances in the Reserve Bank equal to at least 13 per cent. of the demand deposits and liabilities to the public in the Union other than notes and 3 per cent. of its time deposits and liabilities to the public in the Union, but for three years after the commencement of the Act the reserve balances may be not less than 10 per cent. Monthly returns are to be made by all banks of their holdings in the Union of gold, subsidiary coin, and gold certificates and reserve balances in the Reserve Bank, their note circulation, and demand and time liabilities to the public in the Union.

The Standard Bank circular adds that "the provision of the Act which came in for the severest criticism is that providing for the suspension of specie payment of the gold certificates while the market price of gold exceeds £3 17s 10½d an ounce, but the opponents of the measure were unable to produce an alternate scheme which would not precipitate a crisis." The Act seems to involve considerable possibilities of inflation, and its working will need careful watching.

LATIN-AMERICAN NOTES.

(BY A CORRESPONDENT.)

CUBA.—British trade with Cuba, which, owing to United States competition, has of late years marked a notable variation, both in regard to exports (even allowing for the heavy war purchases of sugar) and imports, may be still further prejudiced by the threatened accretion of duty in connection with the cigar trade. The duty hitherto has been 15s 7d for 1 lb of cigars imported ready-made, and the weight of 100 cigars is about 1¾ lbs on an average. The new imposition introduced by the Chancellor of the Exchequer calls for the increase of 50 per cent. on the value of the actual cost of the cigars. At one time it was hoped that London would become the staple market of Havana cigars for the whole of Europe, the large consumption in the United Kingdom enabling importers to lay a correspondingly large stock into the bonded warehouses, thus affording foreign buyers the opportunity of finding a good assortment amongst which the right description for the varied individual requirements were certain to be represented. A prominent firm of cigar importers has pointed out that "the larger the assortment, the more ease in satisfying any one market." According to the same authority, the new duty would cripple the home trade to a considerable degree, necessitating the employment of so much capital for the payment of duty that importers would be compelled to reduce their stocks, and thereby forfeit their chance of securing the future export trade. Cuban tobacco manufacturers are not at all likely to bow their heads to the new taxation without resistance. Retaliation is talked of in the form of a new law empowering the Government to impose the maximum taxation on many British products.

This controversy occurs at a very unfortunate moment, since there had been a disposition upon the part of Cuban importers to increase their trade with Europe generally, and with the United Kingdom in particular. Cuban exports to the United Kingdom had increased from £14,712,751 in 1917, to £19,163,453 in 1918, amounting to about 23 per cent. of the total Cuban sales abroad. These figures compared with exports to the United States, which increased from £51,489,340 in 1917 to £58,799,524 in 1918, the greater part of this increase in both cases being in regard to sugar. But when we come to look at the imports into Cuba, a far less satisfactory condition is exposed. Whereas the already meagre imports from the United Kingdom decreased from £3,075,466 in 1917 to £1,830,913 in 1918, imports from the United States advanced from £41,270,617 in 1917 to £44,452,455 in 1918. The great discrepancy between the trading figures of the United Kingdom and the United States may be attributed to the discouraging tariffs which operate against us and the favourable rebates enjoyed by our North American competitors. The prospects of dearer surgar in Cuba are likely to operate still further against us.

The island has become a centre for the manufacture of white sugar—"Azucar refino"—direct from the cane, and this is destined to be produced to a greater extent in future as a result of greatly improved machinery which lately has been introduced into the Republic upon a wider scale, especially in the Province of Oriente. About 180 sugar centrals are grinding at present, with visible production of upwards of 500,000 tons. During 1919, 21,200,527 bags were cleared, the indications being that a considerably larger amount will be required this year. In April last the quantity of sugar of the present crop that had arrived at the ports of the Republic aggregated 2,383,478 tons, as compared with 2,205,977 tons on the same date in 1919. Cuban growers, sugar mill owners and brokers, claim to control at the present time 2,000,000 sacks of unsold sugar, and recently they pledged themselves not to sell further supplies until the price reached 24 cents per lb. Whether the combination will be enabled to keep prices at this level is doubtful. Latterly, 30,000 bags were sold at 17¼ cents per lb.

ARGENTINA.—One of the latest banking institutions to be established in Buenos Aires is a Scandinavian bank, known as Banco Escandinavo-Argentino, which is devoting special attention to the fostering of trade relations between Argentina and the Scandinavian countries. Its authorised capital is 10,000,000 Argentine paper pesos (roughly £840,000), of which 3,500,000 pesos have been paid up and the necessary legal deposit made. It is said that Mr Waldemar Callevig, representing the Norwegian Overseas Banking Union, Limited, has subscribed 3,310,000 Argentine paper pesos of the capital, and that the board of directors is an influential one, many prominent Scandinavians appearing among the shareholders of the bank. Although established last December, the bank has only lately begun business. Another Scandinavian institution, representing Swedish and Danish interests, is in process of formation.

BRAZIL.—In the meantime, Japanese interests have been by no means idle in South America. Under a recent decree, the President of Brazil has authorised the Yokohama Specie Bank to establish a branch in Rio de Janeiro, and sub-branches in Sao Paulo and Santos, both situated in the State of Sao Paulo. While the capital of the home bank (Yokohama, Japan) is believed to be 18,000,000 yen, divided into shares of 100 yen each, the capital of the Rio de Janeiro branch is stated to be 1,000 contos of reis. The agent of the bank in Brazil is Dr Sunao Mayeda, who was despatched from Yokohama to South America especially to establish branches on that continent.

THE EMPIRE'S OIL RESOURCES.

AT a joint meeting held recently of the Indian and Colonial Sections of the Royal Society of Arts an interesting paper on the oil resources of the British Empire was read by Sir John Cadman, head of the Petroleum Executive. The author first endeavoured to set in a clear light the position and policy of the British Government in connection with petroleum, and to rectify certain misconceptions and inaccuracies due, as he expressed it, to newspaper chatter. There is

no desire by the Government to exclude foreigners from participation in British oil enterprise, apart from the very natural and necessary requirements in regard to directorate and domicile and sales of shares, and the suggestion that Americans were under any special disability in Persia was entirely incorrect. Sir John Cadman said that Great Britain is too sensible of what she owes to those who kept her so well supplied in the past to adopt any attitude other than that of strict impartiality and fairness. A table was first given showing the geological distribution of oil in the chief oilfields, and it is interesting to note that 49.4 per cent. is found in the tertiary formations and 41.1 per cent. in the carboniferous. Of the 60 per cent. of the world's surface covered by these rocks only an infinitesimal fraction has yet been thoroughly examined for petroleum products, and it is extremely premature to talk about any proximate exhaustion of the world's petroleum supplies, although the quantity in sight at the moment seemed limited and declining. We have here once again an example of that rather uncomfortable attitude of uncertainty mingled with optimism which even the most prominent petroleum experts must perforce adopt. Other tables were presented showing the British Empire's production and consumption of petroleum in 1918 and the totals for 1912-18 inclusive, showing a progressive increase in production and consumption. The total production of the Empire in 1918 was 2,080,000 tons, not including Persia's 1,500,000 tons, and the total consumption was 9,117,000 tons; the world's total production being 70,000,000 tons. The imports for the same year were 2,700,000, two-thirds of which came from the U.S.A., followed in order by Mexico, British West Indies, Dutch East Indies, British India, and Persia. The author then came to his main thesis—namely, the distribution of petroleum supplies, including oil-bearing shales, throughout the British Empire, including Persia and Mesopotamia, and he indicated in several parts some very extensive possible formations—*e.g.*, in Mesopotamia the area is not less than 26,000 square miles. In the subsequent discussion, the chairman, Mr Pretyman, pointed out that no man could measure the possibilities of petroleum production in the future. This country is interested not only in the total world supplies, but more particularly in those countries where there was a surplus. The U.S.A., the largest suppliers at present, now had very little, if any, exportable surplus, and were even now competing for surpluses elsewhere. A much smaller supply in Persia and Mesopotamia, which would exceed the local demand, was of much greater interest to this country. The Government, therefore, had first of all to stimulate output in the Empire, and, secondly, in those countries outside the Empire wherein an exportable surplus might reasonably be expected. Whatever might be said of the innumerable Ministries, departments, &c., which had been set up in the last few years, the Petroleum Executive, at least, had justified its existence. Sir George Beilby emphasised the need for a sense of proportion as between coal and petroleum, and said that the cheaper solid fuels should be used as much as possible, the liquid fuel being reserved for the Navy and Air services. Dr W. R. Ormandy expressed the same views, and urged the great need of educating the British public in the best and most economical use, both of coal and oil. Sir Marcus Samuel very rightly called attention to the political dangers that might arise from Government interference in an international industry like that of petroleum production. For many years Great Britain would have to depend on foreign supplies, and it would be impossible to adopt a more foolish policy than that of alienating the sympathy and assistance of those foreign suppliers. If the unfortunate policy were to prevail that each country could only work oil through its own nationals, then he was afraid British capital would be in a very perilous state—*e.g.*, in Mexico or Roumania. Sir John Cadman, in his reply, dealt briefly with some of these difficulties.

Business Notes.

Employment in July.—The Trade Union percentage of unemployment as reported in the *Labour Gazette* was 1.4 at July 30th, as compared with 1.2 at the end of June, and 2.0 per cent. a year ago. The monthly figures since 1913 read as follows:—

End of—	1913. %	1916. %	1917. %	1918. %	1919. %	1920. %
January	2·2	0·6	0·3	1·0	2·4	2·9
February	2·0	0·5	0·3	0·9	2·8	1·6
March	1·9	0·5	0·3	1·2	2·9	1·1
April	1·7	0·5	0·3	0·9	2·8	0·9
May	1·9	0·5	0·4	0·9	2·1	1·1
June	1·9	0·5	0·4	0·7	1·7	1·2
July	1·9	0·4	0·4	0·6	2·0	1·4
August	2·0	0·4	0·5	0·5	2·2	..
September	2·3	0.4	1·3	0·5	1·6	..
October	2·2	0·3	1·1	0·4	2·6	..
November	2·0	0·3	1·1	0·5	2·9	..
December	2·6	0·3	1·4	1·2	3·2	..

Although employment was good on the whole, it was slack in the cotton weaving industry, the linen industry, the fancy lace trade, and the boot and shoe industry. The percentage of unemployed among workpeople covered by the Unemployment Insurance Acts was 2.73 on July 30th, as compared with 2.62 on June 25th. The number of trade disputes involving stoppages of work reported to the Labour Department as beginning in July was 147, while 118 further disputes were in progress at the beginning of the month. The total number of workpeople involved in these disputes was over 90,000, as compared with about 128,000 in the previous month and 839,000 in July, 1919.

Retail Prices.—The *Labour Gazette's* monthly calculations record a rise during July both in retail food prices and in the cost of living generally. At the end of July the general cost of living figure showed an advance of 155 per cent. over the pre-war level, as compared with 152 per cent. a month before and 115 per cent. a year ago. Retail food prices at July 31st were 162 per cent. above the level of July, 1914, as compared with 158 per cent. at the end of June and 133 per cent. about the time of the Armistice. This advance was partly due to the rise in meat prices following on the removal of maximum prices for British beef and mutton on July 4th. Eggs made a seasonal advance, but potatoes became cheaper.

Coal Output.—In the week ending August 7th there was a substantial reduction in the output of coal, explained, of course, by the Bank holiday, but in the following week a satisfactory recovery took place, as will be seen from the following record:—

Week ending	Tons.	Week ending	Tons.
April 3rd	3,979,747	June 12th	4,769,824
April 10th	3,337,793	June 19th	4,873,737
April 17th	4,833,072	June 26th	4,685,524
April 24th	4,989,666	July 3rd	4,734,651
May 1st	4,564,564	July 10th	4,676,328
May 8th	4,674,302	July 17th	4,665,546
May 15th	4,860,668	July 24th	4,284,419
May 22nd	4,830,707	July 31st	4,555,100
May 29th	3,199,947	August 7th	3,086,700
June 5th	4,718,183	August 14th	4,595,200

The latest week's figure is better than those for the two weeks immediately preceding the Bank holiday. The output in Scotland for the week ending August 14th was 126,000 tons better than that for the week ending July 31st.

Shilson, Goode, and Co. Absorbed.—It is announced that Messrs Shilson, Goode, and Co., of St Austell, Cornwall, is, subject to Treasury sanction, to be amalgamated with the National Provincial and Union Bank of England. The London agents of this old-established private banking concern are Messrs Coutts and Co., of Lombard street.

African Bank Fusion.—Official announcement is now made that a provisional agreement has been entered into between the African Banking Corporation and the Standard Bank of South Africa for the amalgamation of

the two banks, subject, of course, to Treasury consent. The Standard Bank is to purchase the undertaking and assets of the African Banking Corporation, and is to give two new Standard Bank shares (£20 with £5 paid up) for every three shares of the African Banking Corporation (£10 with £5 paid up). These terms are "subject to certain reserves for the purpose of satisfying the debts and liabilities of the African Banking Corporation." A sum of £67,500 is also excepted from the sale, and will be distributed *pro rata* amongst the African Banking Corporation's shareholders. No allotment of fractions of shares will be made, but fractional certificates will be issued entitling the bearer of any three of them to an allotment of one Standard Bank new share. Three directors of the African Banking Corporation will join the board of the Standard Bank. After amalgamation the subscribed capital of the bank will be nearly £9,000,000, of which nearly £2,250,000 will have been paid up, and the reserve fund will be nearly £3,000,000.

Co-operative Trawling. — A concern of exceptional interest has just been founded, with Mr J. R. Clynes chairman of the First Central Committee of Management, which also contains a representative of the Admiralty. Its bankers are the Co-operative Wholesale Society, it is called the Minesweepers' Co-operative Trawling Society, Limited, and it is registered under the Industrial and Provident Societies Act to acquire from the Government a fleet of steam trawlers which will be worked on co-operative lines in the sole interests of the members. Membership is confined to ex-service men who are or were fishermen, other *bonâ-fide* fishermen or persons now or hereafter engaged in the industry (which might be taken to mean anyone who bought a share), and employees and committeemen. The shares are of £1, and each member must hold at least five and not more than 200. There is no mention of arrangements for making the shares easily marketable. Voting power is on the basis of one man one vote. Profits, after providing for mortgages, reserves and depreciation, dividend (not exceeding 10 per cent.), and bonus to crews and employees, will go to educational or social funds. This institution has been a good deal criticised on the ground that it is in effect subsidised, and that its future is highly speculative owing to the state of the fish market. As to the subsidy, the prospectus states that, "in order to assist fishermen and others engaged in the industry who are ex-service men to recover their former positions, as some slight reward for their sacrifices, the Government has agreed to sell the fleet on advantageous terms." It also only charges 5 per cent., at a time when it is borrowing at 7 per cent., on the balance of the purchase money, so that the society is certainly "spoon-fed." Few would object to this if membership were confined to the minesweepers who kept us alive during the war, but it evidently is not, and those already engaged in trawling thus have some grievance. As to the second criticism, fishing is certainly at all times a high speculative venture, and, though there is plenty of demand for cheap fish if distribution could be better organised, it may be doubted whether this method of providing for the needs of ex-minesweepers is the best that could have been devised.

The Tenpenny Reel.—The report of the Sub-Committee on Trusts, which has been investigating Coats' 10d reel of cotton, is of a whitewashing nature. The conclusion is as follows :—"Although Messrs J. and P. Coats' profit—based upon the company's figures of actual costs of production at February 4, 1920—of 3.204 pence per reel on the 10d reel of the company's six cord 400 yards blue ticket sewing cotton may appear unreasonably high, yet we recognise that Messrs Coats have, up to the present, had to face a continuously rising market, both for cotton and for yarn, and accordingly to average their costs. If, therefore, Messrs Coats have raised the retail selling price to 10d with the intention of not further increasing it until the average cost of their entire holding of yarn has very considerably risen, we are of the opinion that the present retail price of 10d per reel is not unreasonable." The regularity with which these investigating committees acquit those whom they examine of profiteering suggests

that either there is no profiteering or else they are examining the wrong people. The Sewing Cotton Committee also examine at length Messrs J. and P. Coats' reply to the report of the sub-committee, which commented on their 7¼d per reel charge of a year ago. With regard to this examination the Committee's most interesting remarks are as follows :—"We have ascertained that the difference between the cost of manufacture of 3.83 pence per reel and the suggested selling price at that date of 6d per reel would have been sufficient to give a larger amount of absolute profit per reel both to Messrs Coats themselves and to the retail drapers than they received from the sale of the 3d reel in 1914, although, in view of the greatly enhanced price of the reel, the percentage of profit on the sale to both would obviously have been much smaller." We discussed the original Committee report and Messrs Coats' reply in the *Economist* of February 21st and March 20th respectively.

Raw Cotton Tumble.—During the past week, writes our Manchester correspondent, there has been a sensational fall in raw cotton prices. Values in American futures in the Liverpool market have fallen 2d to 3d per lb, and the spot rate for fully middling qualities on Thursday last was 23.22d per lb, against 26.70d per lb on August 19th, or a fall on the week of 3½d a lb. The weakness in values has been due to increased estimates of the crop in the United States (some forecasts being as large as 14,000,000 bales), the uncertain political situation in Europe, fears of a coal strike in England, and financial stringency. It may be some little time before the tone is steadier, and leading operators are of opinion that prices in the markets will continue to fluctuate wildly. The improvement in the outlook for the American cotton crop for the season 1920-21 has been remarkable. Last May official advices only indicated a production of about 11,000,000 bales, whereas, as stated above, there is now a possibility of a yield of 14,000,000 bales, or a larger outturn than for several years back. A considerable drop has also taken place in the Egyptian staple. Futures in Liverpool during the week have fallen 2d to 3d per lb, and between August 19th and 26th the spot quotation for fully good fair Sakellaridis in Liverpool was reduced from 69.00d per lb to 66.00d per lb. There is every probability of a record Egyptian cotton crop this season.

Cotton Trade Prosperity in U.S.A.—Our Manchester correspondent writes :—Although cotton manufacturers in the United States are passing through a period of depression, leading companies continue to announce big profits. According to an advice received this week, the average dividend paid by the mills at Fall River for the third quarter of this year is 10.7 per cent. There are 37 companies with a total capital of 33,860,000 dollars. In the first quarter of this year the average dividend was 7 per cent. and for the second quarter 7.7 per cent., so it will be noticed the payments are increasing. Last year the average dividend was 14.6 per cent. So far in 1920 the dividends have been larger than during the whole of 1919, and there is a probability of the total distribution for 1920 being over 30 per cent.

Match Profits and Prices.—A report on matches, issued by the Committee on the Investigation of Prices appointed under the Profiteering Act holds out no hope of relief to

the consumer. The Committee finds that the profit made by the industry "would appear to be reasonable," and that "no reduction in the price of matches is likely to take place until it becomes possible to purchase raw material at cheaper rates." In this connection it is recommended "that the Departments concerned take into consideration the possibility of securing from the most productive European sources an adequate supply of aspen and poplar, and placing this country on a level with Continental match-producing countries by the inclusion in any scheme of afforestation of supplies of suitable trees, whether as coppice or hedge-grown timber." It is found also that the rate of exchange enables the Belgian manufacturer to place matches on the British market at a price that is unremunerative to the British manufacturer. On the question of the possibility of a "ring," the Committee says :—

(4) In connection with associations of manufacturers in the match industry, while we are of opinion that in the early stage of combination no external interference is necessary or would be useful we recommend that public attention be directed to the following points :—

(a) The action of foreign interests in attempting to secure an effective monopoly of the British market.

(b) The probability that the defensive policy of British manufacturers may in the end result in the fusion of the individual firms into one monopolistic interest.

We should regard either of these possibilities as highly undesirable in the interest of the consumer.

As regards the match duty, the Committee state that "the removal or reduction of the duty would at the present moment only operate to increase the manufacturer's profit, and not to reduce the price to the consumer unless the three-farthing box could be placed on the market."

Serbo, Croat, Slovene Trade.—The Press Bureau of the Kingdom of Serbs, Croats, and Slovenes has received from the Foreign Office, Belgrade, the following information concerning regulations for exports and imports made on various recent dates :—

I.—(*a*) The customs tariff for the export of tannin will be 1,000 dinars per truck instead of 10,000, as before.

(*b*) The export of copper ore is forbidden.

II.—The export is permitted of wine, brandy, plum jam, fruit, against the payment in all currencies except Austria and Hungarian kronen.

III.—It has been decided—

(*a*) To allow the free export of potatoes and bran in unlimited quantities, but against the payment of custom duty and security of currency.

(*b*) To allow the free export of mouldy maize in unlimited quantities, against the payment of custom duty and security of currency, but under the conditions that at the custom-houses at Logatec, Ghevgeli, Spilje, Baja, Sirig, Tekia, and Metkovic, the examination of the Commission should prove that the goods are deteriorated.

IV.—The free export is allowed, against the payment of custom duty and security of currency, of pease and ground corn-cobs.

V.—The free export of haricot beans is allowed in unlimited quantities, and against the payment of custom duty and security of currency. These free exports should continue until August 31, 1920.

VI.—The custom duty on wine is reduced from 100 dinars on a hectolitre to 5 dinars.

VII.—The export is allowed to all countries, including Hungary, of fresh fish, against the payment of all currencies except the Hungarian and Austrian kronen.

VIII.—(*a*) The export duty on fresh fruit is reduced from 20 dinars on 100 kilo to 2 dinars.

(*b*) The export of staves and wooden door-steps is forbidden.

IX.—The export of all cattle is forbidden, as well as of sheep under four years; also the export of rams under two years, and of sows under one year. The export of unfattened sows is also forbidden. The export of horses is allowed, but only of those fit for killing.

X.—The custom duty on haricot beans is reduced from 100 dinars on 100 kg. to 20 dinars.

XI.—(*a*) The export custom duty on haricot beans is reduced to 20 dinars on 100 kg.

(*b*) The custom duty is reduced for the following products :—

1. On lard to 3 dinars per kg.
2. On ham to 3 dinars per kg.
3. On bacon to 3 dinars per kg.
4. On "salami" to 4 dinars per kg.
5. On sausage and smoked meat to 2 dinars per kg.

XII.—The custom duty is reduced on the following products :— On sausages, salted and smoked meat, to 2 dinars per kg.

Employers and Employed.—The amalgamation is recommended of the National Alliance of Employers and Employed and the Industrial League and Council, and the joint executives will meet shortly to work out the details. Many leading employers and prominent trade unionists are connected with one or other of the amalgamating bodies, and the main object to be pursued will be the bringing together of Capital and Labour with a view to the avoidance of labour troubles, the joint consideration of matters appertaining to their industries, and the general industrial welfare.

Passports for Italy.—A further relaxation in the passport arrangements for visiting Italy is announced by the London office of the Italian State Railways. British and American subjects can obtain from any Italian Consulate a visa for six months, available for any number of journeys to and from Italy within that period without any further formalities. This, with the French yearly visa, now renders matters very simple for visiting Italy.

Oversea Correspondence.

FRANCE.—THE NEW LOAN—IMPORTS AND EXPORTS—THE BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, August 24.

THE detailed terms of issue of the new French National Loan, which are announced in the *Journal Officiel* this morning, show that it will mark an entirely new departure in French national loans in that it will be issued at par. Hitherto, as most people know—with the exception of the issue of a few months ago, which was explained by the unusual fact that it is redeemable at a premium of 50 per cent.—new issues of Rentes have been made on heavy discounts. The 1918 Four per Cents., for example, were issued at 70.80, which gave them a yield of 5.65 per cent. The reason for this new departure may perhaps be found in the fact that the present Finance Minister, M. François-Marsal, is not merely a politician, but a practical banker who has for some years been at the head of one of the great Paris banks. "The new loan," as the Finance Minister remarked a day or two ago, "is a loan pure and simple. You lend France 100f, and you receive 6f of interest every year, net and free of all deductions, whatever may happen." In banking circles here it is believed that this clear and simple proposition, free from all complicated calculations, will prove unusually attractive to the plain every-day investor and his wife, and will induce them to dive far deeper into their well-filled *bas de laine*—never so well-filled as to-day, in spite of, or perhaps because of, the confused economic situation through which the country has been passing.

Another feature of the new issue that marks the hand of the practical expert is the offer made by the Finance Minister to pay interest at the rate of 5.75 per cent. on all large subscriptions paid in full from and after August 25th—the subscription lists will not open until October 20th—until the closing of the lists on November 30th. This offer is made only to the banks, the *agents de change*, and similar categories of investors, and has already produced extremely satisfactory results. It is reported that several milliards of francs have already been subscribed in advance, in consequence of this offer. By this ingenious device, it is to be noted, the Treasury is being placed in possession of a substantial supply of badly-needed ready money several weeks earlier than would otherwise have been possible. It applies only, of course, to large subscriptions consisting entirely of new money that are paid in full. For the rest the investor in the new loan will be permitted to pay in full in Defense or Treasury bons issued before the date of the close of the subscription or in 3½ per cent. Rentes, or to the extent of 50 per cent. of the subscription in 5 per cent. 1915 and 1916, 4 per cent. 1917 or 5 per cent. 1920 Rentes. The new loan may be paid for by four instalments, namely, 25 per cent. on application, 25 per cent. on January 16th next, 25 per cent. on March 1st, and 26.15 per cent. on April 16th next.

In an interview with a representative of the *Petit Parisien* M. François-Marsal foreshadowed once more the possibility that, in view of the stubborn manner in which

London Correspondents: London Joint City and Midland Bank Limited.

gold is still hoarded in France, the Government may decide to demonetise the existing currency and replace it by new coins of a different character, which alone would be legal tender in France. Hoarders of gold coin would therefore, if such a measure were to be taken, find themselves unable to sell, melt down, export, or make payments with their demonetised gold. The penalty in the case of attempts to make use of the demonetised money in any of these ways would be, according to the Finance Minister, confiscation in favour of the poor law authorities. M. François-Marsal declined to take responsibility for the accuracy of the figures, but he admitted that he was aware that M. Peytral, in a recent report to the Senate, estimated that the amount of gold still hoarded in France, in pieces of 20 and 10 francs, was still over three milliards.

Asked in the course of the same interview whether France will be able to meet her obligations to the United States, under the Anglo-Franco-American agreement of 1915, M. François-Marsal replied that the Hythe Conference reserved the question of debts between State and State, but the debts of the State to private persons would be paid on their due dates. The loan of $250,000,000 taken up by France in 1915 through a syndicate of bankers, headed by the Morgan firm, in the form of five-year bonds would be paid, he said, when they became due. Probably part of these bonds would be paid in dollars and the rest by means of a fresh loan. Negotiations in regard to the matter are now in progress.

Figures have been published by the Finance Minister showing the value of goods imported into and exported from France during the period of January 1 to July 31, 1919. The figures show that while there has been an increase in imports of some $2\frac{3}{4}$ milliard francs, the increase in exports amounts to over seven milliard francs. There has already been a drop of about one-third of a milliard in imported foods, while the export of manufactured articles shows an increase of over $4\frac{1}{2}$ milliard francs. The actual figures are as follows :—

IMPORTS.

Items.	First Seven Months 1919.	First Seven Months 1920.	Increase, 1920.	Decrease, 1920.

Throughout the last week the Polish situation has dominated the market, but from the French standpoint it is of interest to notice that, even when Polish affairs were at their blackest, there was nothing here in the nature of a panic. The fact can be taken as an indication that there is very much less speculation on the market than has been alleged. Since Thursday last, with the improved news from Poland, there has been inevitably an increase in business, and as the impression is general that the improved Polish situation will react throughout Europe, there is reason to expect that the present advances will be maintained. French Funds have reacted vigorously to the general movement. Three per cents., that were down last week at 53, have recovered this week to 56.90, while the 4 and 5 per cents. have remained firm. Banks have reacted, though not very energetically, to the general movement, the Banque de Paris being typical in rising from 1,630 to 1,660. Transports generally are more in demand. Metallurgical undertakings have varied, Micheville being up from 1,805 to 1,915, while Aciéries de la Marine have dropped from 1,560 to 1,500 and Nord and Est from 1,625 to 1,550. Mining descriptions have remained for the most part stationary. In petrol shares, Royal Dutch is conspicuous with a rise from 30,000 to 34,000. Shell has been unchanged at about 360, and Mexican Eagle is in advance at 565. Sucreries d'Egypte have improved from 1,035 to 1,123.

The returns of the Bank of France for last week, the previous week, and the corresponding week of 1913 are as follows :—

GERMANY.—POLITICS—EXCHANGE—BOURSE—TRADE RECOVERY—PRICES—IRON—CROPS.

(FROM OUR CORRESPONDENT.)

BERLIN, August 19.

CONDITIONS in Eastern Germany are increasingly threatening, and have begun to react on the foreign exchanges, the Bourse, and business. In Kattowitz, in Silesia, there has been open war between Germans and local Poles backed by the French garrison; in the Polish corridor the German population has welcomed the Bolsheviks as deliverers, foreshadowing complications if the Red progress westward continues, and worse complications—for the local Germans—if Polish authority is restored. In the interior are indications of a Spartacist revival, based on hopes of Russian support. Also Conservative-Nationalist quarters show increased sympathy for Soviet-Russia as a possible lever for reopening the whole European question in Germany's interest. The Federal Government continues to emphasise its neutrality policy; but this policy will hold good only as long as the chief apparent threats to neutrality come from Poland's Western friends, and as long as common cause with Russia presents greater perils than profits. Otherwise, a joint Russo-German war does not seem out of the question.

The Reichsmark's foreign exchange continues to fall at an increasing rate, but the mark shows rather more resisting power than during the great drop of January. Sterling sold to-day at 182.20, the dollar at 50.17½, and the Swedish crown (100) at 1,033.50. The foreign exchanges have risen, with only slight occasional recessions, since the middle of June. As against its lowest point of the year (late May) the dollar has gone up about 50 per cent. The inner value of the mark, as measured by currency inflation, justifies the exchange decline. The Reichsbank report for the first week of August shows a circulation of notes, 56,060,462,000 marks and Kassenscheine 13,290,000,000 marks, so that the total circulation is nearly 70 milliards as against 47 milliards at end of 1919.

The mark's real value does not immediately govern the exchanges; the present drop is due to speculative sales begun in America, and based mainly on apprehensions as to the Eastern situation. Also German hoarders of marks are buying foreign money. The demand for foreign currency for commercial payments continues to be small, owing to the business set-back, which still checks imports of raw materials. The Reichsbank until lately had a large reserve of foreign money, which it used with success to keep the exchanges fairly stable, but it has been obliged to part with some of this reserve, and the exchange market now seems abandoned to speculative influences. The Government has prolonged the Law against "capital flight," with the aim of preventing export of marks, but against this has been suspended the rule requiring exporters to hand over their foreign payments to the Reichsbank. Exporters will in future merely be required to devote foreign payments to importing an equal value in necessary goods. For the establishment of an Exchange Bourse with future settlements, so protecting exporters and importers against exchange losses, negotiations are still being carried on.

The Bourse continues to be firm, with "exchange securities," under influence of the mark decline, leading. On the Frankfurt Bourse the sum quotations of 35 stocks and loans rose between June 1st and August 14th from 9,557 to 12,721. Among exchange securities there has been a sharp rise in Canadian Pacifics and Deutsche Uebersee. The Kattowitz riots depressed Silesian industrials. Last week several mining and metallurgical stocks rose considerably, on the basis of reports of further fusions. Oil stocks, which in the first part of the month had a new boom, have mostly kept near their high levels, the leading speculative stock, Deutsche Erdoël, to-day selling at 1,900. The boom in this stock is partly connected with purchases of brown coal mines with the aim of tar oil production, a branch which made great progress during the latter part of the war. In general, the Bourse attitude is reserved. Against the bull factor of a mark exchange decline is fear of unfavourable developments in the Polish quarter.

Trade, under the same unfavourable financial influences which caused the activity of last winter, shows some signs of recovery. The exchange fall has renewed the price rise, and so tended to revive the home demand, the present belief being that the expected further price fall will not come. The increased purchasing power of foreign money is bringing some foreign orders. The textile industry, one of the first to suffer, shows improvement, but no mill is yet working more than 24 hours a week, and many small concerns are not working at all. In hides and leather the first part of this month showed a sharp price recovery, which seems to have come to a standstill, leaving hide prices about double those of May and higher than those of the world-market, with the result that South American hides are being imported. The prices of imported textiles and foods are slowly following the exchange. Raw cotton, which fell to a minimum of 40 marks a pound, had risen by August 14th to 48.50, but the prices of yarn and cloth have not yet followed suit. In most other commodities the price rise is much less than the exchange drop, and prices of finished metal goods are still mostly falling. Raw metals other than iron have risen sharply in the last weeks, and compare as follows:—

	July 2. Per 100 Kilos. Marks.		August 17. Per 100 Kilos. Marks.
Electrolyt, copper	1,628	....	1,982
Lead	450	....	560
Zinc	575	....	720
Aluminium	2,000-2,200	....	2,800-2,850
Tin (foreign)	4,100-4,200	....	4,875

The industrial recovery is retarded by increasing coal shortage. The Federal Coal Commission has reduced the coal ration to iron and steel works by 12½ per cent., leaving the average supply 43-44 per cent. of that of 1914. Shortage of steel and iron is prevented by the business stagnation; at present only shipyards complain of an insufficient supply. Although iron and steel prices were reduced for a second time by around 15 per cent. from August 1st, a new demand is being made for a price rise, this being based on the exchange fall. A Commission of the Reichswirtschaftsrat has reported against the demand, declaring that several metal concerns are earning large profits, and that their receipts from exports are sufficient to enable them to pay for foreign ore. The ore supply from Sweden and Spain is satisfactory. The Silesian iron and steel works are best employed; West German concerns are working reduced hours, or working largely for stock. The syndicates and conventions which control finishing metal manufactures continue to announce price cuts, but with the exception of agricultural machines, where there has been a general reduction, these price cuts mostly concern small articles, such as wire, screws, and tools. Agricultural machinery makers complain of dwindling export, particularly to Switzerland, which was formerly an important market. The concentration movement in the Heavy Industry continues. The Hedwig Smelting Works, of Viersen, in Westphalia, have passed to Krupps. Krupps' aim is to create a great steel works on the route of the coming Rhine-Maas-Schelde canal, construction of which is a peace condition. A struggle of the American kind, with a resulting Bourse boom, has taken place for the possession of the important Bismarckhuette. The Gutehoffnungshuette, which is associated with the General Electricity Company and the Hamburg-America Line in the Deutsche Werft shipyard at Hamburg, a new and well-equipped creation of the late Albert Ballin, has bought a controlling interest in several large coal mines.

The general tendency is for the smelting companies to buy up on one side coal mines, and, on the other, finishing mills and factories, so that complete and self-supplying so-called "mixed concerns" are the result. The General Electricity Company, which leads a similar fusion movement in its own branch, and which lately received 25,000,000 marks of American capital, has decided to increase its capital from 300 to 550 million marks. With this it becomes the largest capitalised of German concerns. It is believed to harbour fresh fusion plans.

In connection with industrial finance, a plan is under way to establish a Federal Economical Bank (Reichswirtschaftsbank) with a capital of 100 million marks. The bank will be be founded by various industrial groups, led by the "Reichsverband der Deutschen Industrie." A plan has been drawn up for submission to the Reichswirtschaftsrat. The State Exchange Supply Department is to be asked to put foreign currency at the disposal of the new bank, in order to facilitate import of raw materials. The plan is delayed by criticism from the Reichsbank and the Ministry of Finance.

The monthly report of crop conditions shows that the harvest in most districts began a fortnight earlier than usual. The rye crops are least satisfactory. On August 1st the condition of spring rye showed a considerable deterioration as compared with July 1st. Winter wheat, spring barley, and sugar beets also slightly deteriorated, spring wheat remained unchanged, and oats and potatoes improved. In Bavaria and Würtemberg the crop yields will be considerably behind expectations.

AUSTRIA.—THE NEW AGREEMENTS RELATING TO THE SETTLEMENT OF PRE-WAR DEBTS.

(FROM OUR CORRESPONDENT.)

VIENNA, August 20.

THE Austrian Financial Secretary's voyage to Paris and London has again put Austrian pre-war debts into the focus of public interest. It will be remembered that the Treaty of St Germain entitles each one of the Allied and associated Governments to adopt, within a period of one month from its coming into force a complicated system, the principal features of which are the following: All pre-war and war debts to be collected through clearing offices, the several Governments being liable for their respective national debts. All claims, irrespectively of the currency originally due, to be settled in the money of the interested Allied or associated Government at a pre-war rate of exchange; the Austrian clearing office to settle by the end of each month the balance of amounts credited.

When the above provisions became first known a wave of bitter disappointment and indignation swept over Austria. Yet this upheaval of public spirit has soon calmed down to a fatalistic resignation and good-natured hopefulness customary with Austrians. Only some banking firms which would most suffer from so heavy a punishment quickly adapted themselves to the needs of the hour and endeavoured to come to terms with foreign capital, so as to escape from their awkward position through the sacrifice of their independence. When asked how he was going to meet his foreign debts the Austrian industrial, and for the matter of that the Austrian trader, too, would calmly say: "What is the use of worrying about what is thoroughly impossible and unfeasible? We simply cannot pay except a reasonable kronen equivalent of our debts and by instalments. It has never been heard of that the whole industry of a country is sent into the bankruptcy court; moreover, any creditor has an interest to nurse and cheer his debtor lest he may collapse altogether. Either the provisions will never be applied, or the Austrian Government will have to pay on our behalf."

Now the Austrian Government has left its nationals no doubt as to its being unable to follow Germany's example, which shifts upon her own shoulders the liabilities of her nationals; and the hope for a thorough revision of the economic provisions, cherished by optimistic Austrian debtors is also somewhat shaken by the two agreements which Dr Reisch has brought home from his errand to the French and English metropolis.

The agreement arrived at with the French Government, subject to the sanction of both the French Parliament and the Austrian National Assembly, adopts on principle the clearing office system, but grants some substantial mitigations of the Peace Treaty. First of all, Austrian debtors are permitted and encouraged to arrive with their French creditors at amicable agreements within a period expiring on February 1, 1921. Such agreements are subject to the sanction of the French clearing office only in so far they involve the disposing of Austrian property sequestrated in France. In the event of an agreement being offered but not agreed to by the Austrian debtor, the case comes within the jurisdiction of the mixed Court of Arbitration, which may or may not at its discretion enforce an "amicable" agreement, a very extraordinary thing to do for any Court. This does, of course, not apply to French creditors declining an agreement. The liability of the Austrian Government for its nationals' debts as under the Peace Treaty is not only maintained but even extended, the Austrian Government and the Austrian debtor being made jointly and separately liable. Moreover, with regard to claims due in kronen the Austrian Government is to be alone liable for the balance of the original kronen amount, and the equivalent in francs arrived at at a pre-war rate of exchange. This most grievous of the economic clauses remains wholly unaltered. But there are some very important concessions. Whilst the nominal amount falls due at once, the balance, without any interest, is payable in 25 yearly instalments, beginning with the sixth year from the date of the agreement. Claims due in other currency than Austrian are to be paid in five annual instalments, the first of which falls due two months after the execution of the agreement. If the Austrian Government offers collaterals for commercial or industrial debts, the above delay will be extended to ten years. France will charge a compound interest at 3 per cent. for the time up to the agreement in question, and 5 per cent. for the time subsequent to same. All Austrian property rights and interests in France are to be liquidated, and the proceeds thereof are to meet Austrian liabilities. Any Austrian may dispose of 70 per cent. of his assets in France in order to meet the liabilities of a fellow-countryman. Furniture and personal belongings generally will, smaller commercial and industrial enterprises may, be released.

It cannot be denied that the agreement reached with the French Government contains some quite perceptible alterations of the original provisions, and the goodwill of the French Government towards poor stripped Austria is unmistakeable. Nevertheless the agreement—as far as its provisions have transpired by now—are being fiercely criticised.

The draft agreement arrived at with the British Government seems hardly to deserve this name. At a prima facie examination it appears to contain little more than the notice given by Great Britain that she adopts the clearing system as to the United Kingdom, the British Colonies and Protectorates with the exception of Egypt, which latter country, by the way, is particularly interesting to Austria. As to the currency and the rate of exchange at which payments are to be made the provisions of the Peace Treaty hold good; this seems to be the short and the long of the new draft agreement. Now in Austria people have entertained a deeply rooted belief that Great Britain, which always stood for magnanimity towards beaten enemies and for particular farsight in economic matters, would by far outdo France and any of their former foes by way of concessions and mitigations. Is not England the very country where Mr Keynes' much-read and still more often quoted book could and must be written? It would be of no avail to point out to disappointed Austria that anyhow the draft agreement contains some definite concession, *e.g.*, that Austrian subjects are permitted to bid at the auction of their sequestered property, that up to March 31, 1921, sequestered Austrian property may be released with a view to the amicable settlements of debts, that the time in which the Austrian clearing office has to settle the balance of the clearing accounts has been extended from one to six months and others more. The Austrian debtor has been looking for far more radical improvements, and he cannot conceal his bitter disappointment. It will probably take some time before people will realise what prospects are opened by the provision under which the Austrian Government under-

takes to collect the original amounts of kronen debts "as promptly as possible," whilst no such hurry is demanded with regard to the balance, and that the Austrian clearing will have to pay only the amounts effectively collected by it. It is true that in return the Austrian Government warrants a half-yearly minimum payment, the amount of which, as fixed by the agreement, may or may not be a fair one. Moreover, it requires a better knowledge of British methods and British draftsmanship than Continentals usually have, to make out the bearing of the following provision:—"Direct settlements (between creditor and debtor) will be permitted with the sanction of the clearing office in each case," and it may be added, "at any time," contrarily to the French agreement which permits amicable agreements, but within a rather short period. As long as the Austrian debtor is not satisfied that the draft agreement contains some important, though shrewdly concealed, concessions, he will only see in it a verdict which binds him over to pay 28 times his original debts.

SWITZERLAND.—THE ZURICH ELEKTROBANK'S CURRENCY LOSSES.

(FROM OUR CORRESPONDENT.)

GENEVA, August 24.

THE board of the Zurich Elektrobank addressed the bondholders (outstanding about 100 millions) and the shareholders (nom. 75 millions) with a rather sensational message. The redeeming of bonds maturing this autumn seems totally impossible, and the board invites the holders to agree to the transformation of their securities into 6 per cent. preference shares of the same nominal value. The existing share capital of 75 millions will be written down to 18.75 millions ordinary shares, in order to cover the German and Italian currency losses amounting to at least 56 millions. The Swiss stock markets foresaw the necessity of drastic measures some months ago, and gradually the bonds of the Elektrobank fell to 25 and less per cent. of their face value, and the shares even to 10 per cent. But, nevertheless, everybody expressed the hopeful view that the Crédit Suisse would somehow come to the rescue. This lack of help from the part of the leading Zurich bank is the really sensational event, and not the breakdown of the Elektrobank. In order to avoid all misunderstanding, I consider it necessary to underline that the so-called Elektrobank, "Banque pour des Enterprises Electriques," has no financial connection whatsoever with the Swiss electro technical industry. The electro technical industry of Switzerland, the representative firms of which are Brown-Boveri, Oerlikon, and Séchéron, is, in the contrary, in a very excellent state of activity, with large orders for the electrification of railways on hand. The investments of the Zurich Elektrobank are chiefly in enterprises belonging to the group of the Berlin A.E.G. Swiss industrial life is not affected by this catastrophe. As a matter of curiosity, showing how worthless Governmental decrees are in the very moment of serious financial events, it might be noted that, according to the Federal decree of last December, the Elektrobank is a well-standing firm and even entitled to distribute dividends, for the losses are all consequences of currency depreciations.

DENMARK.—FALL OF THE KR.—AMERICAN NEGOTIATIONS—RISING PRICES—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, August 21.

FOREIGN exchanges continue to move unsatisfactorily. £ has reached 24.40 and $ 680.00. Dutch gulden are quoted 222.50 and Swedish kr 139.00, whilst Norwegian kr are actually a fraction below par, being to-day quoted 99.50. Paris is at 48.50, whilst Swiss francs are at 112.75. £ was yesterday at 17.59 in Stockholm, while German marks are down at 9.95 against 13.85 in Copenhagen. Amongst the efforts for improving the $ exchange is an attempt to bring about a big deal in Danish bricks, negotiations having been in progress referring to shipments to the United States of some £2,000,000 worth of Danish bricks, but there appears to be some trouble about the size, which is not the same in the two countries. Coal would probably be taken in exchange, and a large American shipper of this coveted commodity has just paid a visit here. Large industrial concerns have clubbed together in the matter of purchasing American coal, and the results have been encouraging. Among the industries suffering from the dearness of coal is also the textile, and it is a question whether the market will stand a necessary increase in price. One factory has already closed down, as a continued working would have necessitated a rise of 25-33 per cent. in the quotations.

In the meantime prices, on the whole, continue to rise, and a pre-war expenditure of 2,000 kr now stands at 5,234 against 4,838 at the beginning of the present year. The largest increase is on fuel (563 against 100). The lowest figure is residence (153 against 100), whilst articles of food show 253 against 100. The rise in cost of living automatically brings about an increase in wages averaging 13 öre per hour.

Denmark's commercial balance for June is much less satisfactory than for the previous month, exports and imports representing values respectively of 265,000,000 kr and 165,000,000 kr, whilst for the preceding month there was only a deficit of 17,000,000 kr. The average deficit per month for the first half of the present year is 76,000,000 kr.

Letters to the Editor.

THE WORLD'S MONETARY PROBLEMS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your suggestive comments last week on Professor Cassel's memorandum, you write that the Professor introduces a *new* (italics mine) departure in the shape of "purchasing power parities." May I point out that in a letter to the *Economist*, March 20, 1920, on "Foreign Exchange Fallacies," I drew attention to the existence of a *natural* or basic rate of foreign exchange, which, of course, is the same thing as a "purchasing power parity," and I also referred to another common fallacy, that the "balance of trade" is the main governing factor in exchange rates. This latter point is also strongly emphasised by Professor Cassel, and it is not too much to say that these two issues are the substratum of his memorandum.

So much for the personal equation. But what I am more concerned with is the fact that Professor Cassel, having accepted or endorsed my views, fails to draw the necessary inferences therefrom. Given a *natural* rate of exchange, or a purchasing power parity, in what way are these parities to be kept in equilibrium? As you, Sir, observe in your leading article, "a parity which continually shifts would seem to have little practical value in business." Now, upon what does this parity depend? Upon three factors, two direct and one indirect. The direct factors are production, *i.e.*, total value, and the value of the money or purchasing power offered in exchange. The indirect factor, in my view the most important, is that of wages. Unfortunately the world view about wages is psychologically wrong. We persist in looking upon wages or money as an end in itself, whereas properly considered, money or a wage is only a means to an end. We don't really want money, but we do want what money will buy. As a result of this misconception wages have been artificially increased, necessitating, of course, an increase in currency and credit, although logically the only justification for an increase in money, if we desire to keep prices stable, is an increase in production. In the same way as there is a *natural* rate of exchange, or a purchasing power parity, there is, and this is what I desire to emphasise, a *natural* rate of wages. Any attempt to increase that rate under given conditions of currency and purchasing power is foredoomed to failure. In other words, despite all sophistries, the worker cannot get more out of a pint pot than he puts into it. This is the elementary truth that the worker must learn. At present he is trying to avoid this simple

truism, to the detriment of himself and of everyone else.

If I am correct in claiming the existence of this *natural* rate of wages which depends upon the amount of currency, is it not clear that any attempt to regulate the exchanges of the world, and to keep them uniform in accordance with the Professor's "purchasing power parity," depends for its success on regulating wages upon a logical and non-empirical basis? As I have written above, the issue of currency should depend upon production, and not as hitherto upon the demands of the workers for a "standard of living," which, however desirable, as an abstract proposition, has no true bearing—it sounds rather brutal—upon the issue. As I see it, the economic reconstruction of the world depends upon the recognition of this natural rate of wages. The present position is that owing to an artificial rate of wages, production has been short circuited, with the result that prices are unnaturally high and the purchasing power of money unduly low. I believe that, under present conditions of wages, the cry for increased production is raised in vain. Ca'canny is the inevitable result of an artificial rate of wages, which raises prices but not values. Almost alone amongst economists Professor Anderson, of Harvard University, has pointed out that values are absolute and prices alone are relative, the popular view being that prices are only a special case of value. That is incorrect. Price is a relation between two values, the value of money and the value of the commodity. "There must be absolutes behind relations." If, therefore, you raise prices by increasing wages, the only way by which the equation of exchange can be made to work is by increasing the value of the commodity by making it scarcer. The worker gets more money but fewer goods. Short production is the inevitable result of an artificial wage rate, and in my view the recognition of a *natural* rate of wages is the key to stable foreign exchanges and national and international prosperity.—Yours faithfully, FRANK MORRIS.

Constitutional Club, Northumberland avenue.

INDIAN CURRENCY POLICY

TO THE EDITOR OF THE ECONOMIST.

SIR,—At the next session of the Viceroy's Legislative Council, to be held in Simla, it is proposed to make changes in the present coinage and paper currency Acts to suit the recommendation of the Indian Currency Committee. One might have hoped that in view of the happenings since the report was out better counsels would have prevailed, but this seems not to be the case.

The changes were justified by the Committee on three several grounds, viz. :

1. The necessity for linking the rupee to gold.

2. The necessity to safeguard the convertibility of the rupee note, which was in danger owing to the high price of silver; and

3. The necessity to curb the rise in prices.

Of these the first was an altogether false issue, because the rupee was definitely linked not to sterling, but to gold, by actual acts of the Legislature. Our Coinage Act made the sovereign and the half-sovereign legal tender in India at the rate of 15 rupees to the *sovereign*. There is no mention of the pound, paper or any other. Our paper Currency Act was more definite, and ordained the issue of notes at the rate of one rupee for every 7.53344 grains of fine gold. The gold acquisition ordinance of 1917 reiterated this ratio, and although already the temptation to take advantage of the abnormal conditions produced by the war had caused some steps from the straight path being taken, we again find the linking reaffirmed in the only gold coin minted in India since our mints were closed to the minting of silver. I refer to the Gold Coinage Ordinance promulgated as recently as July, 1918, in which the weight and fineness of the gold coin is made exactly the same as that of the sovereign, and, what is more, such coins bore the words "fifteen rupees" on the reverse. After all, thus to talk of the necessity of linking the rupee to something is misleading and contrary to the truth.

As for the price of silver, it was strange how such a Committee of reputed experts allowed itself to be stampeded into asserting that silver would continue very high for many years. Their judgment has been falsified in the short space of six months. The Committee failed to see that silver prices were merely a reflex of inflated commodity prices, and that silver must decline as commodities went back towards the normal. However, whatever excuse there might be for their mistaken pronouncement, the facts are there to-day. Silver has been as low as 44d paper, and is to-day 57d paper. In terms of gold the price has been as low as 36d gold, and even to-day the decline of commodities has only begun. As it goes further silver is bound to go still lower, and is sure to be finally almost a drug on the market as so many nations have taken measures to reduce its use for subsidiary currency. This second ground (and I may add the only currency, or rather quasi-currency, ground) therefore fails.

The control of prices was not a currency ground at all. Europe and England are far more afflicted with high prices than we are in India, and yet nobody has suggested that the £ should be called 15s, although that might create the illusion of making the 9d loaf worth 6d.

This third ground for the currency changes is also already proving a very frail ground, because prices are already declining, and in many staple articles are already to-day lower than in 1914.

In view of the above facts, is it not right that the Government should desist from further attempts to force these changes through? They amount to nothing more nor less than *debasing*. Debasing is resorted to by bankrupt Governments to add to their resources, and it is strongly decried by all honest men as it changes the relations between debtor and creditor to the advantage of the debtor and defrauds the creditor of his just dues. Our rupee being a token, the debasing in our case is not understood by the laymen, but it is there all the same. It adds 12½ crores a year to the resources of our Government, and it changes the relations between debtor and creditor to the advantage this time of the *creditor*. Every debt of Rs. 100 meant in effect a debt for 753 grains gold, and to-day by a strike of the pen it is going to be made a debt for 1,130 grains of gold. The bulk of the population of this country belongs to the category of the debtor class. Should this debasing of India's currency—this most serious injustice to the debtor class (which practically mean all India's toiling millions)—be permitted?—Yours faithfully, B. F. MADON.

Bombay, August 5th, 1920.

LABOUR AND CREDIT.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In reply to Mr Arthur Kitson's letter in the July 3rd issue of the *Economist,* permit me to state the following :

Human nature is about the same in the United Kingdom as the States, and experience with labour runs nearly parallel. In 1915 general business began to feel the prosperous effects of war orders from the various Allied nations.

During the years 1916-17 prosperity abounded, and the condition of the workman was much better than for many years past. From 1918-19, owing to war inflation, wages kept on rising, and the scarcest commodity in the market was labour.

At the beginning of 1920 it was almost impossible for large concerns to obtain help, and during the four years that had passed labourers had amassed sufficient money to own medium priced homes, have large bank accounts, buy automobiles, silk shirts, and other finery.

By this time many of the labouring element became obsessed with the idea it was no longer necessary to work, and owing to their having much cash on hand took frequent vacations. This action necessarily diminished the output of labour, and tended to increase the scarcity of finished products.

Prices in the meanwhile were joyously soaring upward, and to alleviate this condition Mr Kitson offers his first policy "of increasing the output of commodities," &c. As a matter of fact, this plan would not be practical, as here in the States the working men would not work.

There only remained one other expedient to reduce the cost of commodities, and that was to deflate the currency. This deflation process was not started by the banking interests, but by the clamour of the people as a whole, and

half the blame for the disastrous effects of same can be placed on Labour's shoulders.

The best client of the banks is the large manufacturer, and surely he also suffers financially by having his mills idle, and being unable to fulfil trade orders.

It surely is a sad comment upon the present-day state of civilisation that Labour leaders in the last analysis will yield to no other argument than closed factories, idle workmen, and empty pockets to make them realise the iron fact that a day's pay must be accompanied by a day's work.—Yours faithfully, J. Elbert Havens.

Books and Publications.

THE PEACE CONFERENCE.

"A History of the Peace Conference of Paris," Edited by H. W. V. Temperley. Volume I. Published under the auspices of the Institute of International Affairs. Henry Frowde and Hodder and Stoughton. 42s net.

It is impossible in the nature of the case that we should yet have a history of the Conference of Paris. We lack the necessary perspective, and it would be unfair to criticise this book as if it could, or did, profess to anticipate the work that will be done perhaps a generation hence. We must rest satisfied with an account "as moderate, detached, and impartial as possible," and we owe a debt of gratitude to the Institute of International Affairs for having organised what was certainly a very laborious and difficult undertaking. Five volumes are to be published, of which the first three will deal with the Treaty as it affects Germany; the third will contain "a series of illustrative documents, together with a representative selection of speeches."

Only two chapters of the volume now before us (120 pages in all) deal immediately with the Paris conference. The Treaty itself is reserved for detailed exposition and discussion in the second volume, and we are shown here merely its historical antecedents and the machinery by which it was brought into being.

Of this part of the book we have two criticisms to make. The first is that it leaves far too much to the imagination. It is natural enough that those who were themselves present at the Conference should unconsciously assume greater knowledge than their readers are likely to possess. But, even so, we should have expected rather more description of those intimate details which lend colour to the scene. The purpose of the book is said to be "to make people realise the fleeting and now fast vanishing atmosphere in which the Conference lived and moved." But the text does not carry out the promise of the introduction. If we are to appreciate the atmosphere, we must be given the setting; we must see the delegates at work, know how they spent their days and where, and why it was inevitable that the clash of motives and personalities should result in the Treaty as we have it. We are entitled to know these things, not for the satisfaction of any impertinent curiosity, but because the Conference was one of the great events in European history, and because things were done in our name for which we must pay now and answer to the future.

Nobody could picture to himself, after reading this book, a sitting of the Supreme Economic Council as it actually was. The long room full to overflowing, the patient chairman restraining restive delegates, whose dfferent interests and fears led them continually to divert discussion, to thrust their own troubles to the fore; Italy clamouring for coal, France always on the verge of an excited outburst about the devastated districts, America attentive but often silent, a little aloof and yet dominating the position: the appalling difficulty of ever arriving at any decision, the drafting and redrafting, the quibbling through which the Council waded to its final formula; the terror, suspicion, and greed that flowed so often in swift undercurrents beneath the unruffled surface of a unanimous decision that was only unanimous because it evaded the issue or postponed it. None of these things appear even as a background vaguely touched in behind the cold, traditional presentation of the facts that this book gives us; and yet they are essential to an adequate understanding of the story. What is more, this is the only time at which a record of such things could have been written, and these 16 contributors are almost the only people who could write it.

Our second criticism is that even if a respect for discretion and impartiality were held to exclude from this history all questions of motive and personality and "atmosphere," we might yet have expected to be told the bare truth within the narrow sphere to which the editors have chosen to confine themselves. Everyone knows perfectly well that what went on in Paris was altogether different from what we in England were led to believe; and, knowing that, we shall not easily accept a version in which the Plenary Conference, Secretaries General, Plenipotentiaries, and "cordial relations" all play their appointed part in the approved official limelight. If the Peace Conference were faithfully presented it would not appear in the guise of a dignified and diplomatic figure, tricked out in all the trappings and decorations dear to the court historian, who likes to believe that statesmen sit in solemn conclave and deliberate slowly about the fate of nations. We should see instead a busy hive of little men —some few big ones among them, but in unexpected places—hurrying, arguing, pretending, becoming in course of time more and more over-worked, irritable, jaded, and dejected. We should see the subordinate committees at work, and we should be told as much about them as about the Big Four. Those subordinate committees framed the Treaty, and we naturally want to know how they did it. This book does not tell us. It gives a fairly full account of organisation and administrative machinery; but when we have been told the names of the machine and of each part, we are not much the wiser, unless we can be given a glimpse of its purpose, of the methods of its work and of the weak spots that led it to break down and that were never repaired.

One concrete example must suffice to explain why it is that we find this book so disappointing. Nothing could have been more interesting and valuable than an honest account of the negotiations which led up to the Brussels Agreement and of their consequences. That story, simply and truthfully told, would have given us in a small compass a complete epitome of the methods and the difficulties of peace-making at Paris. Beginning with the original armistice stipulations about the handing over of merchant shipping, we should be led through tiresome and dilatory negotiations to the really critical meeting at Spa, which ended almost in a rupture of the negotiations. The Allied delegates order their train, but all through the evening the issue hangs in the balance, until late at night it becomes clear that there is nothing more to be said or done. A few weeks later the same delegates on both sides of the table meet at Brussels, and the whole position is entirely reversed. What happened in the interval? And what happened afterwards when the Brussels Agreement came to be discussed and applied by the Supreme Economic Council? We are told in this book the bare fact that "permitted exports" included this and that, and that the Allies retained certain "options" on German stocks. But the bare facts are meaningless unless we are also given the connecting threads of policy and motive; and what might have been an illuminating history becomes a mere chronicle which has significance only for the initiated, and which to the uninitiated conveys a good deal less than the truth. This fact is admitted—but not justified or excused—when we are told that "the Conference depended on many secret and subterranean influences which cannot as yet be revealed; and much that appears to-day as almost inexplicable will be shown by future historians to depend on causes of which we are almost entirely unaware." But the pity of it is that future historians will know a great deal less of these unrecorded mysteries than the 16 contributors to this book must all, in varying degrees, have known.

ENGLAND AND EGYPT.

"The Egyptian Problem." By Sir Valentine Chirol, London, Macmillan and Co., Limited, 1920.

The new phase now beginning in our relations with Egypt adds to the importance of Sir Valentine Chirol's work. His own suggestions fall far short of the pro-

posals of the Government, but they are on the same lines, and the book provides excellent reasons for supporting the new departure. Writing as the candid friend of the Egyptian Administration, he shows in detail the gradual decline of our policy from its high ideals, and the causes, partly beyond our control and partly due to the limitations of British manners and of the British official mind, which have gradually estranged the Egyptian people and added fuel to the fire of Nationalism. Happily Egypt is now very prosperous, and the book shows clearly that the new departure can be risked without serious danger and with good hope of success. Based as it is on Sir Valentine Chirol's 44 years' knowledge of Egypt and its politics, it is indispensable to all students of our policy, not only in that country, but in the whole Middle East.

AN EXPOSITION OF SOCIALISM.

"Socialism in Thought and Action." By Harry W. Laidler, Ph.D., Secretary of the Inter-Collegiate Socialist Society. (New York) Macmillan. 13s net.

THIS is an interesting exposition of the reason for the Socialist's condemnation of the present economic order, his hopes and wishes concerning the system that he wants to set up, and of the progress of the movement. Dr Laidler is a sympathetic exponent, and works largely by quotations from the opinions of leading authorities. As was to be expected, great divergences appear among these opinions when any practical question arises. For instance, on the subject of farm land, Kantsky asserts that "the proletarian Government would have absolutely no inclination to take over such little businesses.....No Socialist who is ever taken seriously has ever dreamed that the farmers should be expropriated"; while the National Administrative Council of the Independent Labour party recommended in April, 1919, a resolution demanding "the socialisation of the land as the very foundation of the co-operative commonwealth."

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
September 14.	September 15.

The development of the coal strike threat has been the dominant factor in the stock markets this week. Business was generally at a very low ebb, and the tendency in almost all sections was for a gradual easing-off in quotations. Gilt-edged stocks opened the week fairly steadily, but very soon developed weakness, which continued, generally speaking, throughout the week, although 5 per cent. War Loan and 6 per cent. Corporation Stocks were exceptional in showing firmness on Wednesday. Exchange movements were mainly responsible for foreign descriptions moving against holders, but there were some exceptions. Chinese 1912's were well supported early in the week, while Japanese Bonds advanced, and American buying helped Mexican stocks on Thursday. Railway sections have provided few bright spots, Home Rails being continuously depressed, while foreign rails were the object of very little business, and Argentine descriptions drooped. A feature, however, was a big jump in Arauco debentures on the issue of a circular with regard to repayment.

With industrial sections the uncertainty of the Labour outlook has restricted business to very small dimensions, and although movements generally have been narrow, the tone has been very depressed, and changes mostly downward. The fall in Vickers was a feature, being caused by the decision to postpone the declaration of the interim dividend. The directors state that their decision "was due mainly to the non-completion of accounts, and that they were also influenced by the disturbed Labour position, and the danger of a stoppage of engineering works throughout the country.

The continued sagging in the price of the raw commodity has depressed the rubber share market, where business has been very limited. Oil shares have been affected by profit-taking, and with buying orders few, the list records a decided preponderance of declines. Compared with the despondency elsewhere, mining sections have been moderately good, leading diamond shares and a few Kaffirs recording gains, while Mexican mines enjoyed some support, but conditions were against active business, and the public show no inclination to initiate speculation.

The *Bankers' Magazine* records a net decrease of £6,401,000, or .3 per cent., between July 19th and August 19th in the aggregate market value of 387 representative securities.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

5-15 Year Treasury Bonds, repayable at par on May 1, 1935, bearing interest at a minimum rate of £5 per cent. per annum, payable half-yearly on May 1st and November 1st. Price of issue fixed by H.M. Treasury at £100 per cent., payable on application. These are still on offer. For full particulars see *Economist* of May 1, 1920, pages 899 and 915.

London Housing Bonds.—Registered bonds for £5 each or multiples thereof are obtainable for terms of 5, 10, or 15 years, at applicant's choice. Six per cent. interest and full repayment when due are guaranteed by the London County Council on the security of London's rates. Interest payable each September 30th and March 31st. The money will be applied solely for the purpose of housing schemes approved by the Government, and in particular to finance the housing schemes of the Metropolitan Borough Councils. We referred to these bonds in a leader in the *Economist* on June 12th, page 1282.

Waste Fuel Recovery Briquette Company, Limited.—Authorised capital £50,000, divided into 47,500 10 per cent. (income-tax free), preference shares of £1 each and 50,000 ordinary shares of 1s. each. This is an issue of 47,500 preference and 25,000 ordinary shares at par. The remaining 25,000 ordinary shares will be taken by the vendors. There are also offered for subscription 25,000 12 per cent. income-tax free short-term bonds of £1 each. These bonds will be redeemed on or before January 1, 1926, at 24s. each. Applicants can apply for bonds and ordinary shares in the proportion of one bond or ordinary share for every two preference shares. The generous rate of interest offered on the short-term bonds should be sufficient warning to the intending investor that the company is engaged upon a speculative enterprise. While it is desirable that "colliery waste" should be utilised, it is curious that several attempts in this direction in the past have not been successful.

Schofield Brothers (Stocksbridge), Limited.—Authorised capital £30,000, divided into 15,000 7½ per cent. cumulative preference shares of £1 and 15,000 ordinary shares of £1. This is an offer of 11,920 preference and 8,080 ordinary shares. The company was formed in February last to take over the business of motor transport proprietors carried on by Messrs. A. E. and P. Schofield at Manchester road, Stocksbridge. The total issued capital at present is £10,000. The company is also about to build a picture palace. It would have been, however, better financed, if a separate company had been formed to undertake this fresh business. This is apparently the second issue of the company, a previous issue of shares having taken place in February last, when the public applied for 5,420 ordinary and 2,080 preference shares. The information given in this prospectus is insufficient guide for the ordinary investor, and the issue is therefore one for consideration of those with a knowledge of local conditions.

Hawthorns and Co., Limited.—Letters of allotment and regret in connection with the recent issue of 140,000 ordinary shares in Hawthorns and Co., Limited, have been posted. Of the above, 140,000 shares applications to the extent of £128,745 were received from the general public.

COMPANY MEETINGS, &c.

FURNESS, WITHY, AND CO., LIMITED.

SATISFACTORY RESULTS.

INCREASING COSTS OF SHIPBUILDING.

RESULTS OF DECREASED COAL OUTPUT.

SAILORS' LIVING AND WORKING CONDITIONS.

The twenty-ninth annual meeting of Furness, Withy, and Co., Limited, was held at the Great Eastern Hotel, Liverpool street, London, on the 26th instant. Sir Frederick W. Lewis, Bart. (chairman), presided, and was supported by the directors of the company. A large number of shareholders were present.

The secretary having read the notice convening the meeting, Mr R. T. Warwick, of Messrs W. T. Walton and Son, read the auditors' report.

Sir Frederick W. Lewis, Bart., in moving the adoption of the report and accounts, said: The directors have pleasure in submitting to you the accounts for the year ended April 30, 1920, the first complete year's trading since the conclusion of the Armistice—and I think you will regard the results as satisfactory. Last year I promised you they would be not less favourable than the previous year, and this prediction has been borne out. The profits for the year ended April 30, 1920, after making all necessary provisions for taxation, including not only excess profits duty and income-tax, but also a new item, corporation tax, amount to £1,004,820 13s 5d, and after adding the balance brought forward of £120,583 8s 3d, there is an amount available for appropriation of £1,125,404 1s 8d. After deducting the preference dividend and the two half-yearly dividends on the ordinary shares, already paid, there remains a balance of £872,904 1s 8d, out of which the directors have allocated £500,000 to depreciation account and recommend a bonus of 5 per cent., free of income-tax, on the ordinary shares, leaving £172,904 1s 8d to be carried forward.

THE COMPANY'S WORK FOR THE NATION.

I think there is very little in the balance-sheet itself which calls for special comment, except, perhaps, the item of sundry creditors, £7,515,438 12s 11d. This, of course, includes provision for our estimated liability for taxation, and also partly consists of outstanding accounts in connection with the neutral steamers which we took on time charter during the war, and managed for various foreign Governments and British Government departments. These accounts are gradually being closed up, but this takes considerable time, and, in fact, at the date of our balance-sheet, several of the charters had not been terminated. In connection with all this Government work, as I have mentioned in previous years, we placed the services of our organisations all over the United Kingdom entirely at the disposal of the Government, and I think it will be pleasing to you to hear what the Select Committee on National Expenditure put on record in their report upon shipping. I will read their comments:—

"The Ministry of Shipping has control of enemy prizes and of the ships allotted under the terms of the Armistice to the United Kingdom. These ships and neutral vessels requisitioned during the war have been under the management of Furness, Withy, and Co., Limited, who have acted as the Government's agents in these transactions without charge or remuneration for services and management.

"Messrs Furness, Withy, and Co., Limited, acting as agents for the Shipping Controller, arranged for the purchase of seven steamers in Japan, with an option on five more, which was duly exercised. The commission on this transaction was refunded to the Ministry of Shipping, and Messrs Furness, Withy, received no benefit thereupon."

SHIPBUILDING PROGRAMME.

It has been the custom at these annual gatherings to refer to the shipbuilding programme of your company. No new contracts have been entered into during the year, but we still have 26 vessels under construction, being part of those referred to last year. The directors, however, take a serious view of the ever-increasing cost of shipbuilding. It is almost an impossibility to make a reasonably reliable estimate of the final cost of a vessel or of the date of delivery, but this much we do know, that the costs are bound to be such that a considerable writing-off will have to be faced immediately the ships come into commission, and it is partly for this reason that we have recommended that out of last year's profits a sum of £500,000 be placed to depreciation account. I have already mentioned that we have placed no building contracts during the current year, but if the maintenance and development of our trade requires additional tonnage, as may possibly be the case, we will rely, as far as possible, upon being able to purchase suitable existing vessels at considerably less cost than building new ones.

During the year we have, in anticipation of our building programme, sold 14 of the older and less suitable steamers owned in our subsidiary companies. While the war was in progress, and we were consequently unable to construct new ships, we had to acquire second-hand vessels to maintain our services. Some of these have gradually been disposed of and are being replaced with the new tonnage built to our own specifications. One of our associated companies some time ago contracted for two specialised vessels for a particular trade. In reply to recent inquiries as to the probable cost, it became apparent that this was going to be fully double the amount that was estimated when the contracts were placed, and, in fact, three times as great as the value received from the Government for the steamers lost during the war which these vessels were intended to replace. At such a figure the venture was rendered commercially impossible, and as the keels were not laid there was no practical alternative but to abandon the building of the boats.

BERMUDA AND NEW YORK-WEST INDIAN SERVICES.

I referred last year to the acquisition by your company of the New York-Bermuda passenger and cargo service of the Quebec Steamship Company. The s.s. *Bermudian,* after being thoroughly reconditioned and refitted, was renamed *Fort Hamilton,* and the second steamer which we acquired under arrangement with the Bermuda Government was named *Fort Victoria.* Their first season has been a most successful one, and our New York management have received many complimentary communications upon the manner in which the service has been operated. During the Bermuda season, which lasts from December to May, this service provided two sailings per week, and we are glad to know that Bermuda has, as a result, had the most prosperous season, I believe, ever recorded in the history of that important and charming British colony. I had the pleasure and satisfaction of paying a visit there in November last, and the beautiful scenery and foliage and its many attractions were a revelation to me. I can assure you its charm to American visitors is not based alone upon the fact that facilities for refreshment of a liquid nature are obtainable. The Bermuda service was only a part of the Quebec Steamship Company's trade, and we have subsequently acquired their three passenger and cargo steamers *Guiana, Parima,* and *Korona,* and the New York-West Indian service. This trade is capable of great development, and it is our intention to augment the existing tonnage at the earliest opportunity. Before turning from this section of our business, I may mention that during the slack season in the Bermuda tourist business, the *Fort Victoria* is making a series of voyages in the Transatlantic passenger service between Boston and Liverpool, and she is already proving a popular vessel, making her passages regularly from port to port in eight days.

BELLAMY'S WHARF AND DOCKS, LIMITED.

In January last we acquired the well-known and splendidly-equipped riverside property known as Bellamy's Wharf and Dock, Limited, Rotherhithe, which is capable of accommodating large ocean steamers up to 10,000 tons dead weight, and has extensive facilities, with a large frontage. The original object of the purchase was to secure increased discharging facilities in this port. At the same time, the control of this property is proving of great advantage in many other ways, and, being admirably situated for the distribution of goods to and from the warehousing areas, it is kept fully employed.

During the past year your company has extended and consolidated its interests in various directions, notably by the acquisition of a share in the business of Harris and Dixon, Limited, a connection which is proving of considerable mutual advantage, and, in addition, our Paris organisation, jointly with Messrs Capel and Co., has undertaken the management of, and are financially interested in, the Société Franco-Anglais d'Affretement, a company formed for the purpose of concentrating the chartering of tonnage for a number of the most important French shipping and merchant houses. Messrs Clarkson and Co., in whom we are largely interested, hold the English agency.

DANUBE NAVIGATION COMPANY, LIMITED.

We have now opened new offices in Piræus (Greece) and Strasburg, in connection with our regular lines to and from the Continent, and, as some of you will no doubt have seen from recent Press reports, we have undertaken the management of the Danube Navigation Company, Limited. We regard this as a most important development, and we have associated with us in the venture several of the most influential houses in the City of London. The Danube Company hold large and, in some cases, controlling interests in the principal German, Austrian, and Hungarian navigation companies on the Danube, and our Johnston and Prince Line services from the United Kingdom and United States respectively to the Danube seaports will co-operate with the river services to mutual advantage. The lack of proper transport facilities has had a great deal to do with the disorganisation of the Central European States, and it is hoped that the restoration and co-ordination under British influence of the Danube river service will go some way towards the resettlement of the Riparian States. I have just recently returned from a visit to the Danube, and it was a great pleasure to me to note the satisfaction with which British commercial interests were welcomed in that part of the world.

All our other subsidiary and associated businesses, to which I have not already referred, continue to do well and to develop naturally, notably the Prince Line, the Johnston Line, the Gulf Line, and the Norfolk and North American Steam Shipping Company, the Neptune Company, and the Houlder group of shipping companies. The British Maritime Trust and the Economic Insurance Company have in their different ways participated in the general development.

AMERICAN AND CANADIAN BRANCHES—AMERICAN COMPETITION.

In the autumn of last year I visited all our American and Canadian branches, and it was a positive delight to me to see the efficiency of these organisations under the direction of our American director, Mr H. C. Blackiston. From Montreal, Halifax, New Brunswick, and Newfoundland, and all the way down the United States coast as far south as the Chesapeake, we possess our own offices, wharves, and stevedoring plants, all of which contribute in no small degree to the efficiency and popularity of our services.

The question of American steamship competition is naturally very much in all our minds. Lloyd's statistics to June 30th show that while the United States seagoing steamship fleet has increased by 10,379,123 gross tons from pre-war figures, that of the United Kingdom was decreased by 781,347 tons. These figures, however, in my opinion give us no ground for complaint and no cause for fear. No ground for complaint because the American mercantile marine was constructed as a war measure; no ground for fear because you may rest assured that the British mercantile marine can compete with any foreign steamship organisation.

REDUCED COAL OUTPUT AND ITS RESULTS.

The year through which we have passed has been remarkable for the effect which the coal situation has had upon shipping. Until quite recently the price of bunker coal in London, for instance, had risen to the height of £7 per ton. Even now a much higher price is charged for coal to that section of the community which has invested its money in shipping instead of other national industries, such as steel making and the manufacture of cotton and woollen goods, but the real difficulty has been the inability to secure adequate and suitable coals at any of the principal ports of the United Kingdom, as we were accustomed to do before the war, due to the greatly reduced output. I could tell you of instances of ships having to wait several weeks for coal, and at the present moment there are hundreds of vessels lying idle in our ports waiting either for bunkers or coal cargoes. The effect of this reduced output of coal is so far-reaching that it is impossible to say what may not be attributed to it. As a result of so many ships lying idle the working costs are enormously increased; furthermore, the very small amount of coal that is available for export means that a great many vessels have to sail in ballast, the effect of which is that homeward cargo has to bear the double expenses of the outward and homeward voyages, all of which tends to keep prices higher than they need be. As a result of the reduced output of coal in the United Kingdom we see the phenomenon of coal being carried from Australia to Scandinavia, and I could give you many other illustrations of things we would have regarded as absurd a few years ago. If the coal exports were normal our export trade would at present prices be increased by £200,000,000 per annum.

Last year we met during the railway strike, and this year our meeting is on the eve of a threatened coal strike; but I sincerely hope that before irrepairable harm is done those who are responsible for advising the miners will even yet appreciate how much the well-being of the nation generally rests with them, and do everything in their power to secure a greater output. Bearing in mind the difficulties of securing coal, we have converted several of our steamers into alternative coal or oil burners, and to ensure our oil supplies as far as possible we have acquired a share interest in one of the largest oil-distributing organisations.

WORLD TONNAGE AND TRADE COMPARED.

To anyone wishing to judge of the future, I think a study of the statistics recently published by "Lloyd's Register of Shipping" will be most instructive. Disregarding for a moment the usual increase in tonnage that would have taken place had there been no war, we find that there is at present some eight and a-half million tons more shipping than existed six years ago. I venture to think I do not risk contradiction when I say that the trade of the world has not increased to an equivalent extent. The abnormal uses of shipping, that is, uses connected directly or indirectly with the war and its aftermath, have now practically ceased, and consequently the natural law of supply and demand is once again coming into play. It will, perhaps, surprise you to learn that during the last two or three months there has been an average reduction in freights in the principal markets of the world of approximately 30 per cent. This is partly due to the fact that during the summer months there is usually less demand for shipping than during the rest of the year, but, none the less, there has undoubtedly been a considerable fall, which would have been greater but for the fact that trade has been diverted into new channels. I have already referred to the reduced coal output. Prior to the war some 70,000,000 tons of coal were exported from the United Kingdom each year, largely to neighbouring countries, which necessitated short voyages. This export figure has now been reduced to 20,000,000 tons per annum, and the balance is being supplied from the United States, South Africa, and Australia. You will readily appreciate that a much greater number of ships is consequently required, and thus the apparent surplus of tonnage is kept employed; this is really the dominating feature of the freight situation at the present time.

Notwithstanding the somewhat unsettled and discouraging outlook, I am not at all alarmed at the future of our company. We have a magnificent business, and in our regular services to almost every part of the world we have the means of employing our vessels to the best possible advantage. The conservative method of profit distribution always adopted by this board should enable your directors to maintain some regularity of dividend.

CONDITIONS OF EMPLOYMENT.

The International Seamen's Associations have put forward a demand for a 48-hour week. The services rendered by our sailors and firemen during the war were so heroic that every fair-minded shipowner will readily support any reasonable and practicable proposals that are put forward by their representatives. It must not, however, be overlooked that the conditions of employment on board ship differ very materially from those of shore workers. While at sea vessels must be navigated on Sundays and during the night as well as by day, and no hardship is involved in the present system. The increases in wages conceded during the war have been in excess of those granted to shore industries, in addition to which the increased cost of living has been paid by shipowners so far as victualling of the men themselves while on board the steamers is concerned. The men have not to occupy time in going to and from their work as is the case with the shore worker, and even under the present conditions the firemen, whose work is more strenuous than that of the sailors, work on the basis

of an eight-hour day for seven days a week, under very much improved conditions to those that used to prevail.

In any of our 8,000-ton cargo liners a 48-hour week would mean an increase in the *personnel* from 54 to 68 hands, and an extra cost in the wages and victualling of over £8,000 per annum per steamer, plus a capital expenditure of £3,500 per vessel for increased living and lifeboat accommodation. Multiply these items by the number of steamers under our control and a figure representing an amount in excess of the profits of the balance-sheet now under consideration would be swept away. Therefore, it goes without saying that the extra cost would have to be added on to the freights, thus increasing the cost of imports into the country and the cost of production of our manufactured goods. I have made inquiries from captains and marine superintendents of our company, and they inform me that no complaints have ever been made by any of the men of the existing conditions, and while there may be some room for an adjustment and an improvement, the proposals put forward are so unreasonable and unnecessary that it may be hoped they will not be pressed by those responsible for advising the men.

VALUE OF SHIPPING FREIGHTS.

I do not like at these gatherings to appear to be continually dwelling on the advantages of the British Mercantile Marine to the national welfare. But in these days of continued demand for nationalisation of industries they cannot be over-emphasised, and speaking of nationalisation of shipping, it is interesting to note that the ballot of the members of the National Seamen's and Firemen's Union, which is nearly completed, so far shows a vote of more than three to one against nationalisation. I drew attention a year ago to the value of shipping freights in helping to adjust the balance between imports and exports. Declining freights will lessen this contribution, but on the other hand the adverse balance in the import and export figures is getting smaller every month by reason of our increasing export trade, and if only our coal production could be increased to pre-war proportions the balance of trade would, with the existence of our invisible exports, very soon be on the other side, with resultant benefits to the Exchanges and with advantage to the community at large. Our exports to-day show a very large increase in value as compared with pre-war figures, but satisfactory as is this increase we must not assume that it means increased production. While the value of our exports has increased enormously, the weight of goods exported has not increased to the same extent and is still very far short of pre-war figures. For example, for the first six months of 1920 our exports of manufactured iron and steel were 850,000 tons less than for the corresponding period of 1913, although the 1920 figures represented an increase in value of £29,000,000.

From the shipping point of view the quantity of goods to be exported is the most important feature, in fact our future prosperity as a nation is largely bound up with the question of production; and the establishment of sound and mutually considerate relationships between employers and employed is essential. Trade union tyranny should not be tolerated any more than would capitalistic tyranny. Production is the keynote of the situation. The more we produce the greater the prosperity of the nation, and the greater our prosperity the more work there will be for all.

Our new head offices in London, with frontage on both Leadenhall street and Fenchurch street, are expected to be completed next spring, and our London associated enterprises, including Messrs Houlder Bros. and the Prince Line, will be domiciled there.

Since our last annual meeting Mr J. E. Furness, of Halifax, Nova Scotia, one of our directors, has, to our regret, retired from the board, and the vacancy has been filled by the election of Sir Osborne G. Holmden, K.B.E., one of the managing directors of H. Clarkson and Co., Limited, our interest in which company I mentioned in my speech last year.

I now have pleasure in proposing that the report and accounts be adopted, and that a bonus of 5 per cent., free of income-tax, be paid on the ordinary share capital for the year ended April 30, 1920.

This resolution was seconded by Mr R. E. Burnett and carried unanimously.

On the motion of the Chairman, seconded by Mr F. H. Houlder, the election of Sir Osborne G. Holmden, K.B.E., to a seat on the board was unanimously confirmed.

It was moved by the Chairman, seconded by Sir John Esplen, K.B.E., and resolved that the retiring directors, Mr H. C. Blackiston, Mr F. H. Houlder, Mr R. J. Thompson and Mr W. C. Warwick, be re-elected.

The auditors, Messrs W. T. Walton and Son, were re-elected.

On the motion of Mr G. A. Harradon, seconded by Mr J. B. Macafee, a hearty vote of thanks was accorded to the chairman and the proceedings then terminated.

ANCHOR LINE (HENDERSON BROTHERS), LIMITED.

SPLENDID YEAR'S RESULTS.

THE SHIPBUILDING AND OPERATION COSTS.

The twenty-second ordinary general meeting of Anchor Line (Henderson Brothers), Limited, was held on Tuesday, the 24th instant, at the Cunard Building, Liverpool. In the unavoidable absence of Sir Alfred Booth, Bart., the chair was occupied by Mr Francis Henderson. Amongst those present were Mr A. C. F. Henderson (managing director), Sir Percy E. Bates, Bart., Mr Robert Clark (directors), and Messrs J. Crossley Pratt, John G. Rees, R. G. Hughes, John S. Rees, J. M. Caw, Major J. H. Wrigley, W. Stewart Rees, and William Henderson.

DIRECTORS' REPORT.

The report of the directors for the year ended April 30, 1920, states that:—

The services of the company have been maintained during the year as regularly as circumstances permitted, but, owing to war losses and the difficulty of replacement, sailings are still far from normal.

The whole of the debenture stock of the company has now been paid off and cancelled.

The directors desire to record their sincere regret at the death, on September 21st last, of Mr Charles A. Nicholl, who was in the service of the company for upwards of forty years, latterly as assistant manager.

Mr A. J. P. Henderson and Mr William Henderson have been appointed joint managers of the company.

The new steamer *Cameronia* for the Atlantic service was launched on December 23, 1919, from the yard of Messrs William Beardmore and Co., Limited, and it is anticipated that she will be in operation towards the end of this year. Owing to the continual increase in the costs of both material and wages, the price to be paid for the new tonnage under construction for the company is causing the directors grave concern, whilst the rate of building progress leaves much to be desired. The directors confidently hope, however, that the two steamers building with the Fairfield Shipbuilding and Engineering Company, Limited, and the two with Messrs Alexander Stephen and Sons, Limited, will all be launched during next year.

The company's pension scheme has been extended so as to include benefits to the widows and orphans of contributing members.

The profits for the year which ended on April 30, 1920, after providing for depreciation and special reserves against income-tax, war taxation, and contingencies, amounted to		£258,937 3 9
Add balance brought forward from April 30, 1919		144,974 3 6
		403,911 7 3
Out of which there has been placed to reserve account	£200,000 0 0	
And there has been paid dividend on preference shares for year ending April 30, 1920, less income-tax	12,512 10 0	
		212,512 10 0
Leaving a balance of		191,398 17 3
Which the directors recommend should be applied as follows:—		
To payment of dividend on ordinary shares at the rate of 10 per cent., free of income-tax	25,000 0 0	
To payment of bonus on ordinary shares at 10 per cent., free of income-tax	25,000 0 0	
		50,000 0 0
Leaving a balance to carry forward to next year of		141,398 17 3

CHAIRMAN'S SPEECH.

The Chairman said: Gentlemen,—In the unavoidable absence of the chairman, who is taking a much-needed holiday, I have been called upon to preside at this meeting to-day, and I am happy in the fact that my presence in the chair should synchronise with the presentation to the shareholders of such a satisfactory balance-sheet. This year I celebrate the jubilee of my connection with the Anchor Line, and I have been privileged to peruse, therefore, many annual statements of accounts; but the one you have in your hands on this occasion is the best that I have ever seen, and is the best in the history of the company. The income of the company has materially improved as compared with the previous year, in consequence of the vessels having been released from Government control, so that we were able to employ them during the whole twelve months in our regular services. We are still at a disadvantage in our Glasgow and New York trade, owing to

our only having one large passenger vessel available, but we are in hopes that the *Cameronia* will be completed in a few months, and the other steamers in 1921.

HIGH COST OF NEW SHIPS.

In some of our other trades also vessels are not yet on normal service. These new vessels will be costly, as the chairman told you at previous annual meetings, but they will be so specially adapted in every way for the work they have to do that we feel assured we will be able to give complete satisfaction to all our supporters, passengers, and shippers of cargo alike. It will be observed, on a perusal of the accounts, that the total amount of cash in banks, securities, &c., held by the company has been considerably reduced since the last balance-sheet was issued. This is owing to large sums having been paid to shipbuilders as instalments on new steamers, and the value of the company's fleet has, of course, correspondingly increased. I think it may be taken as an axiom that to secure a large and enthusiastic meeting of shareholders one must present a bad balance-sheet. The reverse is our case to-day, and always has been since the commencement of the company, and it is therefore unnecessary for me to enlarge on what are very encouraging figures. I should like, however, to say a few words on two subjects—namely, the cost of operation and the cost of building. Both these are not merely passing incidents, but items of exceptional interest, which must be thoroughly investigated and studied in the light of the present state of business and the country generally. We are in an unsound and precarious period, if such it may be called, at the present time, and while no one who has the real interest of the country at stake wishes to see a reduction in wages, this mad race which is going on for wages to keep up with prices can only end in ultimate disaster. There is one solution, and one solution only. If present wages are continued, and unless dire poverty and distress, which no one wants to see, are to overtake the country this coming winter, not only must we have increased production, but a general realisation amongst all classes that the problem of facing peace is even more important than the problem of facing war, and that it cannot be done by sectional action, but only by a united action, as the country showed in August, 1914.

RESULTS OF HIGH OPERATION AND BUILDING COSTS.

The present costs of operation and building cannot continue, because they are uneconomic, and artificial values never can last. Present prices of building especially and of operation will cause absolute disaster in the shipping trade inside twelve months, and, unless they are reduced properly, circumstances will reduce them drastically. Ships operated at present first cost and operation cost are practically an impossibility, because a public, already overburdened by taxation both at home and abroad, cannot pay the charges necessary to meet interest on first cost. We must therefore do everything we can to try and bring down operation costs; but building costs have already been incurred in many cases, and we will just have to meet them as best we can. A healthy state of business must be our first consideration. There are many other things that I might reasonably take advantage of this opportunity to say to you with regard to the future, but what the next few years may bring to us is all so uncertain that I think it wiser to refrain. Even the most ignorant of us can see portents of the next few years, but there is no doubt we must look forward to a period of great difficulty and great anxiety.

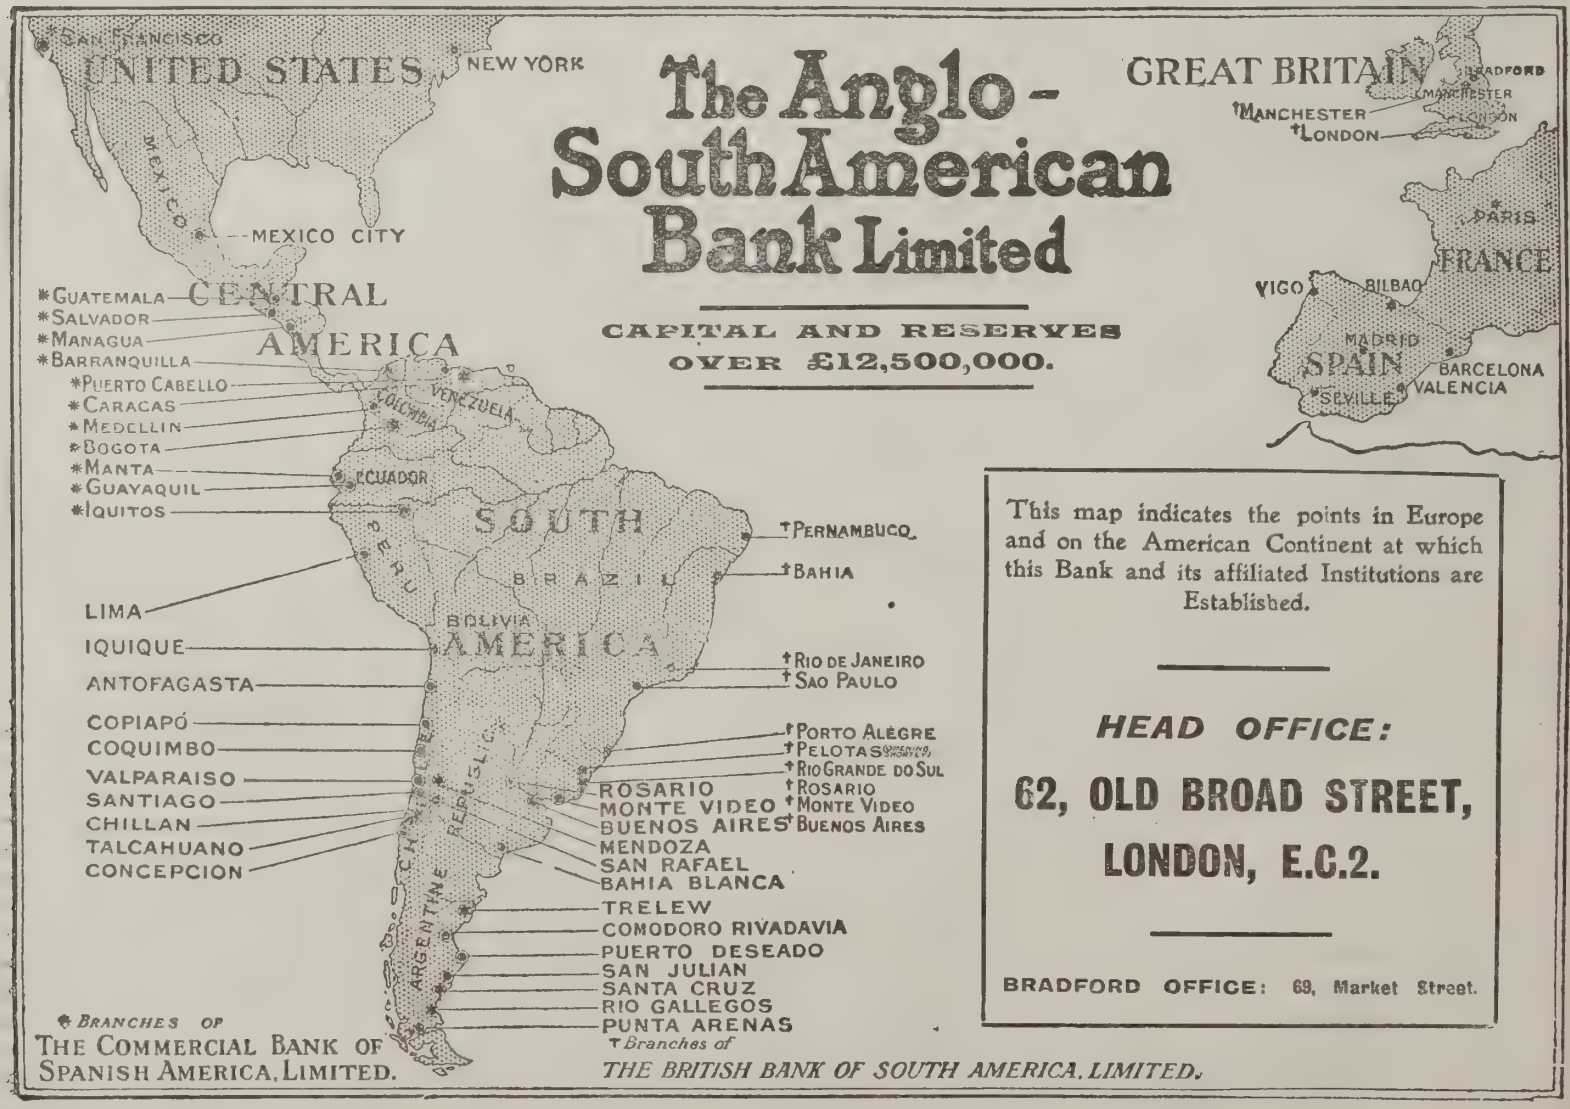
COMPANY'S FORTUNATE POSITION.

We are fortunate in this company in that our forces are well organised in all departments; we will shortly be in possession of many new and up-to-date vessels to add to our already well-equipped fleet, and we may therefore go forward with confidence that we will be able to surmount any difficulty we may encounter as satisfactorily as we have done those that we have met with in the years that are past; but there is no doubt that before normal times come again the whole world must regain a more normal outlook and, if I may say so, a more sensible spirit generally. With these few remarks I have pleasure in moving: "That the report of the directors and statement of accounts for the year ended April 30, 1920, submitted to this meeting be hereby received and adopted, and that, as recommended by the board, a dividend of 10 per cent. on the ordinary shares and a bonus of 10 per cent. on the ordinary shares for the year ended April 30, 1920, be and the same are hereby declared upon the 25,000 ordinary shares of £10 each, payable, free of income-tax, on and after the 31st inst."

I will ask Mr A. C. F. Henderson to second the resolution.

Mr A. C. F. Henderson: I have very much pleasure in seconding the resolution which has been proposed by the chairman.

The Chairman: Is it your pleasure that the motion be adopted?



Carried unanimously.

The Chairman: The next business is to move the re-election of the retiring directors, and I will call upon Sir Percy Bates.

Sir Percy E. Bates, Bart.: I beg to move that Mr Francis Henderson, Mr Robert Clark, and Mr A. C. F. Henderson be re-elected directors of the company.

Mr J. G. Rees: I have much pleasure in seconding the motion that Sir Percy Bates has moved that Mr Francis Henderson, Mr Robert Clark, and Mr A. C. F. Henderson be re-elected directors of the company.

The Chairman: Is it your pleasure to approve of that motion?

This map indicates the points in Europe and on the American Continent at which this Bank and its affiliated Institutions are Established.

Carried unanimously.

The Chairman: There is now the re-election of the auditors, and I will call upon Mr Pratt.

Mr J. Crossley Pratt: I beg to move that Messrs McClelland, Ker and Co. be re-elected auditors of the company.

Mr J. M. Caw: I beg to second that.

The Chairman: Is it your pleasure to approve of that motion? Carried unanimously.

The Chairman: That concludes the business of the meeting.

Mr Robert Clark: Before we separate I am sure you would like to propose a hearty vote of thanks to the chairman for presiding over this meeting, and for his very interesting speech.

The Chairman: Thank you very much, gentlemen. It has been a very great pleasure to be in the chair to-day, and especially as it is on the occasion of the celebration of my jubilee.

ARGENTINE ESTATES OF BOVRIL, LIMITED.

WORLD-WIDE PROBLEM OF FOOD PRICES.

ANTI-PROFITEERING CHAIRMAN PROPOSES INTERNATIONAL INQUIRY.

GREAT OPPORTUNITY FOR THE LEAGUE OF NATIONS.

The annual meeting of the Argentine Estates of Bovril, Limited, was held on the 26th instant, Sir George Lawson Johnston (chairman) presiding. In moving the adoption of the report and accounts he stated that he had just returned from the Argentine, where he had had the privilege of an interview with the President of the Republic. Sir George said that it was noteworthy that the increase in the cost of living was not only felt in an importing country like the United Kingdom. In the Argentine the prices of, for instance, bread, meat, sugar, and eggs were all over twice the 1914 prices, though these articles were all produced in, and surpluses were even exported from, that country; whilst coal, which was imported into Buenos Aires, cost about five times the pre-war price.

Argentina was a great exporter of wheat, but in Buenos Aires the hoardings were covered with official posters pictorially explaining economical methods in the use of bread.

At home we have been told by economic experts that high costs were in part due to the very large issues of paper money and consequent depreciation of currency values. It was obvious that this was not the cause in Argentina, as there the issue of paper dollars showed only a comparatively small increase—about 30 per cent.—whilst the relative proportion of gold to paper currency was higher than before the war.

Popular feeling had led the Argentine Government to prohibit exports in the case of certain foodstuffs, whilst the foreigner was made to pay taxes by way of export duties which had been put on nearly all products, on a basis of a percentage of the excess over pre-war price.

PROFITEERING AND INTER-CLASS SUSPICION.

In spite of record prosperity, the cry of "profiteer" was as frequently heard in South America as here, and wages and labour questions were at least as difficult. In fact, in comparison, inter-class friendship was less strained in the United Kingdom, probably owing to the special tax measures that had been taken to pluck the maker of war profits. Here the profiteer had lost many feathers through excess profits duties, and the old rich had been turned into new poor by income and super taxes, death duties, &c. In the Argentine Republic, on the other hand, where so many had grown richer since 1914, an important topic of conversation was the possibility of a tenpence in the pound maximum income-tax being imposed. The fact was that the bulk of the discontent all over the world was caused not simply by the increase in prices, but had arisen because popular opinion believed them to have been raised excessively by profiteers. As the Bovril group were somewhat persistent anti-profiteers in precept and practice, he took the liberty of suggesting that until the matter was investigated officially and internationally, and the instances and effects of profiteering were sifted out from the other causes creating the rise in the cost of living, we should not begin to get rid of the feelings of class suspicion and discontent so prevalent throughout the world.

THE LEAGUE OF NATIONS AND THE COST OF FOOD.

The League of Nations had committees on armaments, international health, transit, waterway problems, and international justice. Might he respectfully suggest to the authorities of that League that they could do a great world service by adding a committee to consider internationally the question of the cost of food?

It was only recently stated that the newspapers gave only brief summaries of even important speeches about the League of Nations—and who were better judges of what the public wants to read than the newspaper editors? He ventured to suggest that the tackling of this question of food costs by an authoritative committee of the League of Nations would do more to awaken practical public interest in the League, and to secure universal support for it, than any other single action it could take. This was the subject of all others that touched the daily life of the people, and unceasingly absorbed the attention of the masses in all countries throughout the world. National investigations were bound to be limited in scope—to stop short at the incidence of exchange and similar import problems—but a committee of the League of Nations would have at its disposal the official data from the greater part of the world, and its findings would be free from any suspicion of local political bias.

FOREIGN BANK RETURNS.

Owing to variations in rates of exchange, it is our intention to show in future the position of the undermentioned banks in their national currency. The position of those banks which are still shown in sterling we hope in the course of the next few weeks to give in the currency of their own country.

† Rates lowered 1/2% on Jan. 2, 1918, and lowered 1/2% on Feb. 14, 1918, but raised 1/2% on Oct. 6, 1919, and 1/2% on Nov. 6, 1919, and 1% to 5% on April 15, 1920. ‖ Lowered from 3 1/4% to 3% on June 5, 1918, but was raised to 3 1/4% on July 31, 1919, to 3 3/4% on Oct. 6, 1919, to 4 1/4% on Nov. 6, 1919, and 5 1/4% on April 15, 1920. * Changed from 4 3/4% to 4% on Dec. 27, 1917, and from 4% to 3 1/2% on Feb. 14, 1918, at which rate they remained until they were suspended on May 31, 1919. Daily sales resumed on July 14, 1919, when two months' bills were also introduced. The daily sales of two months' bills were stopped on August 15, 1919. Rates commenced on July 14, 1919, as follows:—Two months, 3 3/8% (July 14 to August 15, 1919, period of daily sales); three months, 3 1/2%; six months, 4%. On October, 6, 1919, the three months' Treasury bill rate was raised 1% to 4 1/2%, and six months 1% to 5%. On November 7, 1919, the three months' rate was raised from 4 1/2% to 5 1/2%, and the six months' rate from 5% to 5 1/2%. On March 19, 1920, daily sales of six months' Treasury bills at 5 1/2% were replaced by twelve months' Treasury bills at 5 1/2%. On April 14, 1920, three and twelve months' Treasury bill rates were raised from 5 1/2% to 6 1/2%. Sales of twelve months' Treasury bills were suspended on April 29, 1920.

		West Coast of Africa	1,725
Total value of imports of gold	2,160,576	Total declared value of exports registered in the week	1,022,321

Messrs Samuel Montague and Co. write as follows on August 26th :—"Gold : The Bank of England gold reserve against its note issue is practically unchanged—£121,532,830, as against £121,532,565 last week. The fair amount of gold which came into the market during the week was taken for India and the United States of America. The sale by the Ceylon Government of 199,500 sovereigns lying in the general treasury vaults at 14 rupees the sovereign to a well-known Pettah merchant, on condition that payment was made in silver of the equivalent value, is practical evidence of the statement made in our circular of the 12th inst. that the sovereign possesses no legal tender value in India pending the new ordinance fixing it at 10 rupees. (Ceylon, though a Crown Colony, adopts the same currency legislation as the Indian Empire as regards the ratio between gold and silver.) Silver : The price of silver rose 2¾d on the 20th inst. to 63¾d, the highest price touched since May 4th last. Chinese demand in America—driving the quotation several points above the dollar point—was the initial cause; the effect upon the market here was intensified by a fall in the American exchange, and the fact that Continental sales were temporarily lacking. A rumour has emanated from Bombay that silver rupees were being, or were about to be, shipped, presumably to be dealt with as bullion. Our circular letter of February 12th last announced that the Indian Government prohibition against dealing with current gold and silver coin otherwise than as currency had been cancelled. Hence Indian jewellers were again able to break up and use silver rupees just as they were accustomed to do before the closing of the mints to free coinage. At the highest price recorded for silver this week, namely, 63¾d, and at an exchange of 1s 10⅜d per rupee, there would have been a handsome profit on the importation of silver rupees, provided the necessary licence were obtained from the British Treasury to deal with the coin as bullion. The possibility of rupees being marketed as silver—in view of the vast quantities minted during the last year or so—is quite within view, but any sales of rupee bullion must necessarily depend upon the course of the Indian exchange. The Indian currency returns below show substantial increases weekly in the holding of silver rupees—although this period of the year is usually associated with withdrawals for the financing of crops.

INDIAN CURRENCY RETURNS.

(In Lacs of Rupees.)

	Aug. 7, 1920.	Aug. 15, 1920.	Aug. 22, 1920.

NOTICES.

The Canadian Bank of Commerce announces that branches of the bank have been opened at Kensington, Prince Edward Island, Hull, Quebec, and Naicam, Saskatchewan. The branch at Spalding, Saskatchewan, has been closed.

The London Joint City and Midland Bank, Limited, announce that a new branch has been opened in temporary premises at 6 The Square, Abingdon, Berks, under the management of Mr J. C. R. Gardner. It is also announced that in place of sub-offices full branches are now established at Turner's Hill, Cheshunt, Herts (Mr W. D. Richardson, manager), High road, Loughton, Essex (Mr D. O. Freeman, manager), Fore street, Lower Edmonton, London N. 9 (Mr W. P. Richards, manager), and at 672 Old Kent road, London, S.E. 15. (Mr S. F. Bishop, manager).

We regret to announce the death of Mr Maurice George Carr Glyn, a managing partner of Glyn, Mills, Currie, and Co.

The Commercial Bank of London has removed from Austin friars to Gracechurch street. On and after Monday the address of the bank and of the transfer offices of the home industrial companies with which it is associated will be 37-41 Gracechurch street, E.C. 3. The new telegraphic address will be Commerbank, Ltd, London, and the telephone number will be Central 7733.

We understand that Mr E. J. Stevenson, who was appointed a joint general manager as from January 1st last of the National Provincial and Union Bank of England, Limited, was unable to take up his duties owing to ill-health, and that he has now retired; also that the following appointments have been made:—Mr Arnold McClelland, joint manager, Princes street office, to be an assistant general manager at head office; Mr H. S. Eltenton, joint manager, City office, Bishopsgate, promoted to be joint manager, Princes street office, with Mr S. W. Ellis; and Mr E. B. Montesole, deputy-controller, advance department head office, to be joint manager, City office, with Mr J. D. Bright.

VICKERS, LIMITED.—The question of interim dividend on the ordinary shares will be settled when the accounts for the years 1916 to 1919, inclusive, are ready for presentation to the shareholders.

Reports and Notices.

Mr Alex. Spencer has been elected a director of Vickers, Limited, to fill the position recently vacated by Mr Dudley Docker, C.B.

Arrangements have been made between the London Assurance Corporation and the London Guarantee and Accident Company, Limited, whereby the London Assurance Corporation will, as from October 1st next, underwrite and transact marine business at its offices at 7 Royal Exchange, London, E.C., for and on behalf of the London Guarantee and Accident Company, Limited.

The Royal Exchange Assurance Corporation announce that Colonel Frank D. Watney, C.B.E., has been elected on the court of directors.

An amalgamation has been arranged between Messrs Mullens, Marshall and Co., and Messrs Steer, Lawford and Co. Mr H. A. Daniell, the official Government broker, and senior partner of the former firm, is retiring, as also are Messrs G. F. R. Farquhar and M. Meredith Brown from Messrs Steer, Lawford, and Co.

Mr J. W. Openshaw, the manager of the grain department of Spratt's Patent, Limited, has been appointed to a seat on the board of that company.

RAILWAY AND TRAMWAY TRAFFIC RETURNS.

No traffic returns of British Railways have been issued since the Government took control of the Railways at the outbreak of the War. The Government took over control of the Irish Railways as from January 1st, 1917.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Harvesting operations are proceeding rapidly under favourable climatic conditions, the absence of rain this week also permitting farmers to carry the balance of the hay crop. The temperature, however, keeps low for the time of year, and more warmth would greatly enhance agricultural prospects. Fair harvesting weather also prevails over Western Europe, and cereal crops are being secured in good condition. Only small quantities of new crop native wheat were marketed here, quality being variable, but with a good demand prices ranged from 90s to 96s per 504 lbs, according to condition. Imported grades were quiet of sale at regulation rates, with liberal allocations to millers chiefly of North American, Australian, and a small proportion of Argentine. Shipments of the latter are on a limited scale, but increased quantities come to hand from America. Reports from the principal exporting countries are mostly favourable, and the present outlook gives no cause for anxiety either with respect to the needs of importers or to the extent of available supplies in the chief producing countries. The flour trade remains quiet. English G.R. grade, 63s 6d per sack, ex mill, with small allocations of imported at 64s to 65s 9d per 280 lbs, ex warehouse. Barley in generally quiet request, but with moderate offerings rates were generally steady. English malting 80s to 97s, grinding ditto, 78s to 80s. Californian 105s, ex ship, per 448 lbs. No. 4 Canada, Western, 73s 6d, ex ship, and 75s 6d landed. Morocco, in latter position, 78s per 400 lbs. On c.i.f. terms a cargo of Dan/Bess/Kustendji, September-October, changed hands at 67s per 400 lbs. Parcels of superior Californian afloat sold 97s; September-October, 94s per 448 lbs. No. 4 Canada Western, afloat, at 71s per 400 lbs. Maize opened dull and weak, but subsequently became steadier. Plate, old, ex-ship, 66s, landed, 67s 6d; ditto, new landed, 73s; and ex-ship, sold at 70s 6d per 480 lbs. In the forward section cargoes were dull and inactive, with an easier tendency. Dan/Bulgarian, August-September, sold 67s 9d. Parcels irregular. Plate, July-August, sold 67s 6d; August-September, 62s 6d, 63s 9d, 62s 9d, and 63s; September-October, 61s 3d, 62s 9d, 61s 9d, and 62s per 480 lbs. Oats quietly steady after an easier opening. English whites, 62s to 64s; ditto, old, 64s to 70s; new blacks, 56s to 58s; Scottish, 72s to 74s. Plate, landed, 50s to 53s. American white, clipped, nominally 56s per 320 lbs. On c.i.f. terms business was concluded in Plate f.a.q., arrived, at 48s; afloat, 48s 6d to 47s 6d; July-August, 46s 6d, 48s 3d, 47s; August-September, 46s, 48s, 46s 6d; September-October, 46s 6d to 46s 9d per 320 lbs. A feature was the offer of a cargo of Roumanian, f.a.q. September-October, at 49s 6d per 304 lbs. Beans and peas quiet at late rates. Offals steady. Oatmeal in quieter request, but prices firm, with American slightly dearer. Grain chartering was on a moderate scale, but rates were steady in most directions. From Montreal, 11s per quarter was quoted, September, to U.K./Antwerp/Rotterdam, with similar figures from American Northern Range ports, and 13s to West Italy. Gulf quotes 12s first half and 12s 6d second half September, and 14s West Italy. Portland or Puget Sound paid 115s for wheat home. The River Plate section proved quiet, but rates quite steady for maize, with business passing on the basis of 87s 6d for 4,500 tons Rosario to U.K./Continent, September-October, with linseed at 92s 6d per ton. India quiet. Bombay quoted at 60s on dead weight to U.K. Further tonnage was taken up from Dalny, wheat and/or flour at 125s, Mediterranean/U.K., and heavy grain from Australia to U.K./Continent at 125s per ton. South Africa inactive and nominal. Time charter featureless, and rates weak at 12s for handy size vessels, six months' trading.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1919-20, contrasted with 1918-19, 1917-18, and 1916-17.—(Particulars of imports of wheat and flour temporarily discontinued):—

	1919-1920.	1918-1919.	1917-1918.	1916-1917.

THE IRON AND COAL TRADES.

Our Glasgow correspondent (writing on Thursday) says:—An unlooked-for change has developed in the Scotch pig-iron position. For some time back local and home consumers generally have been buying sparingly of Scotch brands—since prices reached their current comparatively high level. This has resulted, though the deliveries were large, in an accumulation of unseen stocks in makers' hands, and as there has been no indication of late of buyers departing from their conservative policy, producers have approached the authorities for permission to extend more freely into the export market. For a period now they have been exporting 10 per cent. of their outputs. The proportion has been increased to 20 per cent., with promise, it appears, of a further concession if it is found that the new arrangement does not militate against the interests of the home trade. Those concerned in the latter have, it is said, no stocks, and they are waiting for a fall in prices. Holders, however, are firm in insisting on existing terms, which run from 270s to 275s for No. 3, 280s to 285s for No. 1 at home, and round 330s for export. Steel works are getting hematites at 285s per ton, and are paying only £10 10s for heavy scrap, which is coming forward in big quantity. In this connection an enormous tonnage is going through the mills, chiefly in boiler and ship plates,

inquiries for which indicate no slackening off; in fact, there cannot be until the great volume of trade on hand in the shipyards and boiler shops gets worked off. In constructional and various engineering sections complaints are common as to scarcity of material, and not a few consumers complain that the interests of shipbuilders are receiving undue consideration—the outcome of the amalgamation of nearly all the steelworks with shipbuilding undertakings. More semi-manufactured iron and steel sections are on offer from Belgium at much lower quotations than obtain locally. Bar iron makers are full up with orders, as are tube makers, black and galvanized sheet makers, nailers, bolt, nut, and rivet makers, and, in short, all related branches. Owing to indifferent working, it is reported, supplies of coal have been more limited this week, and there has been a bit of a scramble for such as were available. Gas and electricity works have secured fair reserves.

Our Middlesbro' correspondent's report, dated August 26, 1920, is as follows:—Iron Pig.—The Cleveland ironmasters have agreed upon an advance of 7s 6d per ton for Cleveland pig-iron, which will now make the price 225s per ton for No. 3 and No. 4 foundry from September 1st. This, however, has not seriously affected business, as the rise was not unexpected. Cleveland pig-iron is still the cheapest in the country. The price of mixed numbers East Coast hematite remains unaltered at 260s per ton for home consumption. Manufactured Iron and Steel.—Work has been resumed after the local holidays, but it will be some days before the full output is reached. Meantime, the threatened coal strike is casting a shadow over operations. Steel ship plates, home, £23 10s; steel ship angles, £23; iron ship angles, £30 15s; iron bars, £30; steel rails, £23 net. Iron ore.—So far as can be ascertained very little new business has transpired during the last week, but a few odd cargoes have been sold on the basis of 48s per ton, c.i.f. Tees for best Bilbao Rubio.

CUMBERLAND IRON.

From our Workington correspondent:—No marked change has occurred in the Cumberland and North Lancashire hematite pig-iron market during the past few weeks. The fact that makers, with twenty-seven furnaces in blast between Workington and Carnforth, a total only exceeded in times of stress during the war, have sold practically the whole of the production to the end of the year is a sufficient indication of the requirements that exist at a time when a depression is stealing over the steel trade. More than this, the whole of the make has been reserved for home users, the bulk of the low phosphorus iron for the Midlands, Scotland, and South Wales, and most of the ordinary iron for the local steelworks, smelters still refusing the tempting business that is on offer from the Continent. The expectations that were held at one time of a break in prices have not been realised, Bessemer mixed numbers still being quoted firmly at £14 15s per ton. It is evident, however, that the peak has been reached, and it is doubtful whether any premiums which consumers were willing enough to pay earlier on in the year are now to be secured. The view taken in authoritative circles is that there is a full year of good trade before hematite pig-iron smelters, and that no considerable fall in prices, if any, will be witnessed until the end of 1921 or the beginning of 1922. There is, of course, no prospect of any expansion of output. The threat of a coal strike has vetoed any possibility of make being increased to satisfy promptly the needs that users would like to be met, and in any event the outlook is so certain that makers prefer supply to lag behind demand. There is a strong inquiry for manganese alloys, ferro being in active request for export, and spiegel is also a strong market. The activity in the steel trade is shrinking, tube and strip steel especially being smaller requirements, but the works are fairly well off for orders for railway material, and the mills are rolling a substantial tonnage for overseas. New business is not of large extent, and the chances are that operations may be further restricted before the end of the winter. There has been some improvement in the output of native iron ore, several of the mines having made good progress with development work that could not be started until this year, but twenty-seven furnaces require far more metal than can be mined in Cumberland, and the ore here is having to be supplemented by importations of Spanish and Indian ores. And it is obvious, it goes without saying, that there is no native ore available for the East Coast or for Scotland. The coal trade is phenomenally brisk. The local industries absorb a very large proportion of the production, and after urgent landsale needs have been satisfied there is very little left for the Irish market, the weekly shipments across Channel often being two or three thousand tons below the total which is allocated for export. The supply of Durham and Northumberland coal, however, is abundant, and but for this the shortage in this district would be very acute indeed. Householders are taking all the coal they can get in view of a strike in September. Shipping (house and industrial) is now quoted at 35s 11d per ton, f.o.b.; ironworks, 32s 8d per ton; iron ore mines, 37s per ton; and landsale, 40s to 41s 6d per ton. The entire make of the 390 by-product ovens is being absorbed by the furnaces here blowing on ordinary iron, and none, therefore, can be spared for the Continent, even if export licences could be secured. By-products command a strong market. All the tar is going to the chemical works, and the make of benzol and sulphate of ammonia is inadequate to satisfy requirements. The chemical works are busy. A dullish tone pervades the scrap-iron market, and prices are easier.

BY-PRODUCTS TRADE.

Tar Products.—There is very little change in these products since last report. Pitch remains very strong, and makers are by no means anxious to sell even at current high rates. London

Every Description of Banking Business.

quotes £11, East Coast £10 10s, West Coast £10, and South Wales £11 per ton. Naphthalenes are still in heavy demand, that for refined continuously increasing. The price is now about £55. Crude is needed in increasing quantities in the firelighter trade, and makes £16 to £22. Solvent naphtha is a shade better at 3s 5d, although there does not appear to be any improvement in demand from the manufacturing trade. Heavy naphtha is 3s 7d. Benzols are firmer. 90's are somewhat scarce, and is quoted 3s 4d on rail in the North and 3s 6d in London. Pure benzol is 3s 10d per gallon. Cresote remains firm at 1s 1d in the North and 1s 2d in the South. Cresylic acid is a slow trade. Dark, 95/97 per cent. quality, 4s 2d. Pale, 97/99 per cent quality, 4s 8d per gallon. Carbolic acid weak at 3s 6d per gallon for crude 60's and 1s per lb for crystals 40 per cent. Intermediate products are featureless, and there are no alterations of note to report.

SULPHATE OF AMMONIA.—Business is quiet, and orders are being accepted at £24 10s per ton for September and £25 for October deliveries.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The improved demand for wool at the sales which opened in London on Tuesday has helped matters somewhat in this centre, and the tone of the market is better than it has been for some weeks past. There is not a great deal of business passing even yet, but there are indications of increasing confidence on the part of buyers, and topmakers are putting up their quotations in sympathy with the enhanced prices paid for superior wools in London. Medium and low crossbreds, however, are still neglected. There is a moderate amount of business in home-grown wools, and prices generally are steady. New business in yarns is mostly of a hand-to-mouth character, but some firms have recently booked fair weights at current prices. Real expansion in this department cannot be expected until overseas markets are more settled. Manufacturers report a fair number of inquiries, but actual business is scarce. Some calcellations are still coming to hand, and many buyers are asking for delayed deliveries. Generally speaking, there are no reserves of coal, and in the event of a strike mills would have to close.

COLONIAL WOOLS.

(FROM A CORRESPONDENT.)

There was a very encouraging attendance of home and Continental buyers on the occasion of the opening of the seventh series of London sales last Tuesday. The opening day's catalogue was more than usually attractive, there being an excellent display of superior combing merinos from Victoria, while some shafty Adelaides provided an opportunity for Bradford topmakers to purchase freely. Altogether 90,000 bales of colonial wool will be catalogued this series, and the wide variety of the wools will provide a real opportunity to test the state of the trade. The opening was quite as good as the majority expected; in fact, the competition of the home trade for the best merinos was very encouraging, and if French buyers had purchased medium merinos in the same way there would have been nothing whatever to complain about. The outstanding feature of the week's auctions has been the very satisfactory demand for warp merinos. It was known last series that there existed some good buying orders for really good style merino wools, and the fact that one or two buying brokers have received orders to purchase this series without limit shows clearly enough that these wools are wanted. The general opinion prevails that really good warp merinos showing a four-inch staple are not going to be very plentiful, and buyers are doing the right thing in taking them while the opportunity offers. All reports regarding the new clip are anything but encouraging, on account of the recent drought, new clip wools which we have had the privilege of inspecting pointing distinctly to a very short-grown staple indeed. There will be plenty of quality, but little length, hence all superior warp merinos are certain to remain in excellent demand. These wools appreciated anywhere from 3d to 6d, and it may be fully expected that the demand will remain intact throughout the series.

Medium combing merinos have sold in a middling way, but without showing any improvement, and the same can be said for carbonising classes. Big stocks of these exist, and the Government will be wisely advised to let them go providing reasonable prices are offered.

Crossbreds are moving very similarly to merinos. Good greasy halfbreds are wanted by the home trade at about 5 per cent. improvement. Medium descriptions, both greasy, scoured, and sliped, are steady, while coarse crossbreds continue to be neglected. These are certainly feeling the competition of South American classes, and until the department lower their limits there is little chance of any marked improvement in the demand. Good sliped halfbred lambs continue to make good figures, and for home woollen and worsted trades they are still wanted.

The opening results are quite as good as could be expected, and clearly indicate some return of confidence in the present and future of wool values. Some regard the outlook on the Continent as better, and renewed business is being looked for at an early date. Better reports are also coming to hand from the United States, and among many buyers in Coleman Street the opinion prevails that the worst is past.

THE COTTON TRADE.

MANCHESTER, August 26.

The feature of the week in the market has been the slump in raw cotton rates, there being a distinct fall in both American and Egyptian qualities. Business in yarn and cloth has been thoroughly disorganised. Many producers have hesitated to give out quotations, and, on the other hand, buyers have adopted a waiting policy, pending more settled conditions. According to cables from India, supplies of piece goods are wanted in the bazaars, and despite the uncertain outlook moderate lines have been booked in light fabrics. Demand for China has been at a very low ebb. The position in Egypt appears to be improving, and isolated transactions have been arranged. Other smaller outlets have been slow, and nothing worth mentioning has been done in home trade circles. Cloth prices are distinctly easier on the week. Trade in all kinds of yarn has been of retail dimensions. Spinners have given way in price, and the tone in all quarters has been very irregular.

THE TIMBER TRADE.

The timber trade has experienced a quiet time over the past month, the demand from all quarters, excepting housebuilding, being dull. Although there are ample stocks of imported wood in the country, there is a shortage of 3 x 9 deals and the popular sizes of battens for building construction work, prices for which are fairly well maintained, whilst on the other hand there is an easiness in values for the less favoured dimensions.

Although most materials are advancing in price, it is difficult to prognosticate the early future of the wood trade; Swedish and Finnish shippers have still very large balances of their stocks unsold, and may offer reduced terms in order to clear their yards, whilst as regards the spot market the opportunity of clearing parcels for ready money may be an inducement to holders who, for financial reasons, desire a speedy turnover of their holdings. Indeed, there have been instances already of such sales by weak holders.

There is, therefore, a likelihood of consumers finding the spot market more attractive, but it must be stated that f.o.b. purchasing for next season's shipments show no slump in values, if anything it is the reverse, and unless Russia and the old Russian Baltic ports come more freely into the market, Swedish and Finnish shippers will continue to rule the roost.

The Baltic wood freight market is also in favour of lower prices. Tonnage is plentiful, and rates have made such a substantial falling off that owners declare that should this continue they will be compelled to order their steamers to lie up. Even now Baltic rates are about four times those ruling before the war.

The hardwood market has been dull over the past month. Stocks generally are heavy, but merchants are not in a hurry to quit their holdings, as American exporters are still out for high values for new shipments, thus strengthening the tendency in spot prices.

The demand for native-grown timber continues to increase, and this condition of affairs will remain so while foreign tmber is so high in value. Native timber merchants are alive to the opportunities which are afforded them by the high state of the imported wood markets, and are finding new outlets for their productions which, before the war, were served by foreign supplies.

OILSEEDS AND VEGETABLE OILS.

The outlook in the seed-crushing and oil industry is only moderately satisfactory. Trade in oil fails to develop so well as might have been expected, and it is regarded as unlikely that it will do so until better economic conditions prevail in Europe generally. Nevertheless, a fair trade has been done in the past few months, new markets have been opened out, and exports have expanded in many directions, and not least with the United States, which have been large purchasers of raw linseed oil to augment their own production. An agreeable feature is that trade is on steady normal lines, with prices of oil approximating more nearly to the true value than was the case in the early months of the year. This has been particularly so with linseed oil, in which trade continues to be done at figures which allow no more than a reasonable margin of profit to crushers. This week rather an easier tone and lower prices are reported, but on the whole the market is steady, though the volume of trade is small. This, of course, reacts upon linseed, transactions in which are governed by the oil demand and the disinclination of crushers to go beyond satisfying their urgent needs at present prices.

Cotton oils have again strongly advanced, existing supplies having been pretty well all absorbed, and good sales reported for both September and early October delivery. Egyptian crude at Hull, on Tuesday, have advanced to £76, an appreciation of £16 per ton since the close of July, while edible refined is quoted £87, ex Hull, mill. In sympathy, Egyptian f.a.q. has advanced to £21 for spot and shipment. Already the new Egyptian crop is being offered, £23 being the nominal value for September-October loading.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR CORRESPONDENT.)

The removal of the export embargo on British hides is still making itself felt, and all classes of hides again advanced in Bermondsey on Thursday; best ox made 13⅞d-14¾d per lb, an advance of ½d-1½d on last week's prices. Cows were ¾d-1d up, and calf ¾d-2⅝d up, lights selling at 18½d per lb. Pelts were lower, and declined 3d-12d in several classes. The demand for foreign hides is also improving, as large sales are reported of River Plates at 14½d-15½d, c.i.f. shipping weights. Dry and dry-salteds are not selling very readily, as tanners still have a good deal of low-grade sole leather in stock made from this class of material. Cables from New York report the American market as weak, with heavy best packer hides selling at 27 cents. Sales of frigorific hides are cabled at 54 Argentine dollars. Drys are neglected, and best horse hides are selling at 7.50 dollars.

The tone of the leather trade is improving, and the advance in market hides has led consumers to again enter the market, as they fear an advance in prices of leather of prime selections. Ten to 14 lb blends are selling fairly well, repairers being anxious to get other grades suitable for their use. Pinned offal is selling very slowly, and some very low prices have been taken for bellies.

Upper leather is dull, and values declining. Box calf and glace kid are falling in price, but the advantage, as usual, is finding its way very slowly to the shoe wearer, although prices were rushed up on him directly leather advanced in the early days of the war. French and German light leathers are arriving in large quantities, and this is not improving the position of the British light leather maker. Much Government glace is still in stock, and will have to be sold at a great reduction. Boot manufacturers are a shade better off for orders, but these are mainly for sports wear and ladies' fancy shoes for winter festivities.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, August 27.

General course of trade proved quieter this week, consumers in many cases having satisfied their requirements for the time being, but with no undue weight of supplies prices were not altered to any extent. Of fibres, Manila hemp, after hardening under the influence of reduced production and a good many covering orders being in the market, became quiet and weaker. Other fibres experienced a slow trade.

SUGAR.—There is no new feature to note with regard to free lots of manufacturing, the market, in fact, being quite idle and nominal. Some crystallised West India, sold, 110s to 115s; white Mauritius, 133s. American syrup still neglected. Only retail sales occurred in honey. Liquid glucose, spot, 57s.

COFFEE.—Spot business is still confined to the clearance of a few lots suitable to the home trade, export varieties being difficult of sale. Futures have been quiet. September delivery, sold, 68s 6d; and December, 70s to 69s 6d.

COCOA.—Only a meagre trade again resulted, and prices favour buyers.

TEA.—During the week 34,000 packages Indian and 33,700 packages Ceylon were catalogued in auction, and met with improved support, though very low rates were again current for inferior descriptions.

RICE.—A steady business was effected, mainly for export. Bran quiet.

SPICE.—A moderate business resulted in pepper, and market ruled steady. Fair black Singapore, spot, sold, 6⅝d; October-December, 6¾d; Aleppy, spot, 7¼d; Tellicherry, 7¾d; white Singapore, 1s 2d; and Muntok at 1s 3d, with ditto, October-December, 1s 0⅜d. Zanzibar cloves quiet at 1s 7d for spot lots. Pimento, sold, 4d. Tapioca steady, quiet. Fair flake, spot, 2½d; fair Penang seed, ditto, 26s. Sago flour, August-October, sold, 22s 6d; farina, ditto, at 30s to 31s. Desiccated coconut, fine cut, spot, sold, 82s 6d; medium, 95s.

JUTE.—Market dull during the week both with regard to old and new crop, while trend of values proved weaker. Native first marks assortment, actuals, old crop, August-September, sellers, £43; subs £39 value, new actuals, August-September, £47 10s; September-October, £46 10s; lightning actuals, £36 10s for new, and £34 old crop. Hessians and twiils steadily held, but slow of sale.

HEMP.—After being firm the market for Manila assumed a quieter tone. J grade, August-October, sold, £67 to £66 10s; October-December, £66 10s to £66. L, August-October at £56. New Zealand steady, quiet, and high points on spot, sold, £54 10s to £55. Italian steadily held, but there is only a limited trade.

SHELLAC.—Market rather unsettled, and spot trade quiet. Fair T.N., spot, 675s; October delivery, sold, 595s to 610s, and 590s.

COPRA.—Moderate sales transpired at irregular prices. Sundried Straits, August-October, London, sold, £54 to £54 10s; October-December, £55 to £54 10s, and £54 15s. F.M. Straits, October-December, Marseilles, £54 to £54 10s; and F.M.S. ditto, October-December, Antwerp, £55. Ceylon, October-December, London, sold, £55. Palm kernels steady but quiet. October-December, done, £37 to £37 5s.

MENTHOL.—Spot, Kob-Suz, sold, 36s; peppermint oil, ditto, 8s; aniseed, 4s 3d; and slab camphor, 6s 10½d per lb. Japan wax, spot, sold, 115s cwt.

EGG PRODUCTS.—Market remained quiet this week. Liquid yolk, October-December, sold, 102s 6d per cwt. Albumen, spot, done, 4s 10½d.

RUBBER easier on the week, and slightly irregular at times. Plantation crepe, spot, sold, 1s 10¼d to 1s 9d; October-December, 1s 11⅛d to 1s 10½d. Standard ribbed smoked sheet, spot, sold, 1s 9½d to 1s 7⅜d; October-December, 1s 10d to 1s 9¼d; fine hard Para, spot, 1s 9½d.

OILS. — Linseed quiet and easier. Spot, net, naked, 80s; September-December, 76s 6d. Rape firm. Crude, spot, 74s; refined 80s. Cotton dearer. Crude Egyptian, 77s; Bombay, 67s; refined edible, 90s. China wood firm. Hankow, spot (barrels), 108s; July-August, 100s; and Hong Kong, spot, 104s. Palm kernel firm. Crushed, spot, 80s; extracted, 79s. Palm firm. Softs, July-August, 62s 6d; Lagos, 63s 6d. Coconut dearer. Ceylon, spot, sold, 90s; August-October, 89s; Cochin, ditto, 98s. Soya quiet. Oriental,

afloat, 73s; August-October, 74s; deodorised, 91s. Japan fish firm. August-October (cases), 45s. Cod liver steady. English, spot, sold, 50s. Groundnut quiet. English crushed, naked, spot, 81s; deodorised (barrels) 100s. Turpentine easier, but fair activity prevailed. American, spot, 142s; September-December, 144s; January-April, 146s. Rosin slow. American, grade B, 45s; F, 56s; G, 56s; K, 57s; M, 57s 6d; WW, 59s; French, F/G, 53s; H, 53s; WW, 54s; extra pale, 55s. Petroleum steady, quiet; American, spot, 2s 1¾d; and water white, 2s 2¾d per gallon.

OILSEEDS.—Linseed market quiet and easier. Calcutta afloat sold, £39 to £38 10s; August-September sold, £38 10s to £38; Bombay, September-October, £39; Plate afloat, Hull, sold, £35 5s to £35; August-September, £35 to £34 15s. Rape-seed active and dearer. Toria, August-September, Hull, sold, £33 15s; real bold Ferozepore, £32 15s; brown Cawnpore, £31 10s. Cottonseed firmer. London Egyptian f.a.q., spot, old crop, August-September, sold, £20 10s to £21; September-October, new, £22 10s to £23; Bombay, spot, £14; August-September, sold, £14 10s to £14 5s. Castor seed inactive. Bombay, July-August, Hull, sellers, £28. Gingelly firm. Chinese, afloat, to Continent, sellers, £47. Groundnuts nominal. Coromandel, August-September, £40.

METALS.—Tin continued an easier market until the middle of the week, cash fluctuating down to £262 5s, and three months' to £269, these positions being since registered at £263 and £269 10s respectively. Improved buying on Thursday led to a smart advance, though values settled down below the best, cash being done at £266 to £271 10s, and since at £270; three months', £272 to £279 10s, and finally at £278 10s. Values further advanced at Friday's session, cash being registered up to £275 10s, while finally sold at £274 10s, and three months' to £283 10s, settling down at £282. English ingots, £274 to £275. Copper: The standard market opened rather dearer last Monday, cash being sold at £94 to £94 5s; and September, £94 5s to £94 7s 6d. General steadiness prevailed until the middle of the week, with cash registered at £94 7s 6d; three months', £95 5s to £95s 10d. The tendency was easier on Thursday; while cash changed hands at £94 to £93 17s 6d; early October, £94 15s; and three months', at £95 5s. At Friday's session cash reached £94 5s, and three months' £95 15s. Electros, £111 to £117. Lead rather easier at £35 17s 6d to £36. Spelter lower, at £40 to £41 10s. Antimony: Regulus, English ordinary to best, £52 to £55; foreign, spot, £45. Aluminium: Home trade, £165; export, £185. Wire bars quoted at £111 to £117.

TALLOW.—Messrs Colchesters and Woolner write on August 25th as follows:—The tallow market was quiet during the week, and prices declined 3s to-day. It is from export orders and not from home consumers' requirements that any improvement in the demand is likely to arise. At auction to-day 1,494 casks tallow were offered, and 65 were sold. Quotations are:—Australian mutton: Fine, 77s; good to fair, 75s to 72s; dull to dark, 69s 6d to 65s; hard, 79s. Australian beef: Fine, 77s; good to fair, 75s to 70s; dull to dark, 67s to 63s; sweet, 78s. Present shipment from Australasia: Mutton, fair coloured, 48 degs., 78s; and mixed, 43½, c.i.f., London, 75s. The market letter is lower: Tallow, 3s; stuff, 3s. Town tallow, 67s per cwt. Rough fat per 8 lbs, 8½d to 1s 4½d; melted stuff, 51s per cwt. Quotations are:—Town: 65s net cash, naked, ex works. Country: Frail casks, 57s; home melted, shipping casks, net, f.o.b., good coloured, none; fair to dull, 67s to 62s. Bone fat: White, none; pale, 62s; benzine, 57s; melted stuff, 57s, f.o.b.

Cheques and Post-office Orders to be made payable to the Proprietors of the "Economist," Granville House, Arundel street, Strand, London, W.C. 2.

Single Copies, ONE SHILLING.

Copies of the *Economist* may always be obtained in Paris: Messrs Galignani, 224 Rue de Rivoli; Messrs Brentano's, 37 Avenue de L'Opera. New York: *Economist* Office, 20 Broad street (Room 1,709), and *Journal of Commerce*, 32 Broadway.

THE MONEY MARKET.

REACTION to ease after the turn of the month was less rapid than had been expected by those who counted on Government interest payments and debt redemption to flood the market forthwith. The theory that the reaction was checked by the extent of the market's previous borrowings and consequent repayments seems to be groundless, because these borrowings were not large enough to have any appreciable effect on the figures of the Bank return. A more probable reason was that the monetary machine works slowly in these times, partly owing to holidays, and partly owing to commercial and industrial uncertainties. In any case, the fact was that on Thursday part of the sum due to the Bank had to be renewed, and money was quite uncomfortably scarce. Discount rates were steady at a slightly lower level. And so the market goes on from

a spell of ease produced by letting Treasury bills mature, and so causing a spasm of fear of a rise in Bank rate, to a spell of discomfort when sales of Treasury bills enable ways and means to be paid off, and so round and round again; and so it seems likely to be till the Treasury bills are dealt with by a forced loan or otherwise, and dealers in credit learn that its expansion *ad libitum* is not part of the scheme of the financial universe.

* * * *

The Bank return showed increases of £53,000 in the stock of gold and £1,639,000 in the circulation, and a consequent decrease of £1,586,000 in the Reserve. Government securities were swollen by nearly 16 millions, presumably in order to finance interest payments, but there was, to the general surprise, a small decrease in Other securities, showing that the amount borrowed at the end of August was not very considerable. Other deposits rose by 12¾ millions and Public by one. The circulation of Currency Notes was reduced by £826,000 to £355,186,200, which includes £4,081,600 for notes called in but not yet cancelled. The fiduciary issue is thus £308,086,200, or £12,513,800 below the maximum.

* * * *

The total amount at the credit of Post Office Savings Banks and Trustee Savings Banks accounts on August 28, 1920, was £341,104,250, which compares with £342,013,016 a month ago, and £329,611,420 at the corresponding period last year.

* * * *

The following table shows Public Income and Expenditure for the week ended August 28, 1920:—

Receipts.	Mln. £	Expenditure.	Mln. £
From Revenue	20·430	Supply Services	13·437
Taken from Exchequer balances	42	Interest on Debt.....	4·225
	20·472	Sundries	1·504
Less—Reduction of Debt	1·306		
	19·166		19·166

These operations reduced the debt by a sum of £1,306,507, and caused the following changes, which are reflected in our table of National Debt given in another column:—

	Mln. £		Mln. £
Treasury Bonds..	+ ·210	Advances by Public Depts. ..	— ·800
National Savings Certificates	+ ·100	Bank of England Advances..	— 4·250
Treasury Bills	+ 6·013	Surrenders of Bonds, &c.....	— 2·579
	+ 6·323		— 7·629

Property and income-tax yielded £4,823,000, while Customs and Excise contributed £5,387,000. Excess profits duty brought in £3,236,000. Special receipts under Miscellaneous yielded £3,500,000. The floating debt was increased by £930,000.

* * * *

In the exchange market the last seven days have been exceptionally quiet, and for the more important currencies changes in rates have been small in comparison with recent movements. In the middle of the week dollars had fallen again to 3.55, but they have now improved, and are back at about 3.57, as compared with 3.57½ a week ago. Francs have been unsteady within the relatively narrow limits of 51.10 and 51.50, and on Friday are at their highest at rather above 51.50, as compared with 51.10 a week ago. Forward rates in both cases remain practically unchanged, dollars being one to one and a-half cents per month over spot, and francs 15 to 20 centimes per month below. The main interest of the week has been the various hints that have appeared as to preparations for the redemption of the French portion of the Anglo-French loan. After several premature reports that a new loan had actually been concluded it now appears that the terms are still not finally settled, although their conclusion may be expected at any time. Gold has been sent over, although this action has come too late to have the favourable effect on the value of the franc which similar British action had on that of sterling some time ago. From Paris it is reported that $40 million of the loan has already been bought by France on the open market, and another $40 million is expected to be bought before redemption date. How much of what remains over will be met by gold and how much from the new loan is not yet definitely known. The Belgian franc has also depreciated somewhat on the week, but at 48.35, the spread between the French and Belgian franc has widened somewhat to 3f 15c, as compared with 3f 05c a week ago. At one time during the week the lira improved to 76, and although there has been a slight reaction it stands at 76.75, a little better than the figure of 77 on Friday last. Among neutral exchanges the most important movement is again that of the florin, which, after a temporary recovery at the end of last week, has again steadily fallen away in value to 11.17. Future quotations remain unchanged at 3 to 5 cents per month below spot. In the Scandinavian exchanges Stockholm, after remaining steady, has moved up sharply during the last two days to 17.70 as compared with 17.65 a week ago. Both Christiania and Copenhagen, however, showed a decided improvement in the earlier part of the week, and although they relapsed slightly, they are at 24.95 and 24.80, well below last Friday's figures of 25.12½ and 25.22½ respectively. At the same time the recent loan negotiations have as yet yielded no definite results. Madrid has moved slightly in our favour, Geneva slightly against us. After some improvement the German mark fell away again in value, and at 177½ remains practically unchanged on the week. Quotations for futures are a little wider at ¼ to ½ mark per month below spot. It may be noted that almost the only remaining restrictions on foreign exchange dealings have now been abolished, with the withdrawal of the rule that foreign currency derived from export should be handed over to the Reichsbank. Negotiations are also said to be nearing completion for the establishment of a clearing house, backed by a guarantee fund, for forward exchange transactions. Vienna, Helsingfors, Bucharest, and Warsaw, in which last city new exchange regulations have been recently introduced, all show some improvement on the week. Silver is again somewhat lower. Rupees are slightly cheaper, while both Hong Kong and Shanghai have followed the fall in silver.

EVENTS OF THE WEEK.

AUGUST 28TH.—Riots and bloodshed in Belfast. Statement of Poland's case at the Minsk Conference published.

AUGUST 30TH.—Petrol prices raised. Polish delegates recalled from Minsk.

AUGUST 31ST.—Miners' ballot in favour of coal strike. Revolt spreading in Mesopotamia.

SEPTEMBER 1ST.—Coal up 2s 10d per ton. Workmen's railway fares raised. Cost of telegrams, receipt stamps, &c., increased.

SEPTEMBER 2ND.—Coal strike notices to expire on September 25th. Breakdown of negotiations in engineering dispute.

"AFTER-WAR MENTALITY."

IN the joint report of the economic experts consulted by the League of Nations for the instruction of the Brussels Financial Conference it is observed that as a preliminary condition to the efficiency of the financial suggestions on which they are agreed the resumption of work and production in Europe is essential. In their individual reports the distinguished Professors naturally do not lay much stress on this aspect of our economic difficulties. They were asked to throw light on financial questions for a financial conference, and the industrial problem, as affected by the willingness of the worker to work, was thus to a great extent outside their terms of reference. Professor Bruins, of Rotterdam, makes a brief reference to a "certain post-war mentality," which he attributes to the sudden ceasing of the strain of war. Professor Pigou, in his admirably clear and sensible Memorandum, begins by saying that "as a result of the destruction and confusion wrought by the war, goods for consumption and goods for the construction of capital equipment are in short supply throughout the world. This general shortage can only be remedied by a combination of enhanced production and economy in consumption." But he goes on to deal with the matter in hand, namely, the financial problems on which he was consulted. This very logical and reasonable attitude on the part of his eminent colleagues on the inquiry seems to have caused some surprise to Professor Gide, who is further at variance with them as to the extent of the evil wrought by inflation, and also on the subject of an Entente guarantee of the German indemnity. This proposal would mean, in effect, that England would undertake to pay what Germany owes France if Germany does not do so. Could England really be expected to do this after the losses that the war has inflicted on her? Professor Gide seems to think so, for he protests against the dismissal by Professor Cassel of the plan of an Entente guarantee as impracticable, and states his view that it should be one of the principal tasks of the Conference to make it possible. We have contended ever since the Armistice that England ought to write off the debts of her Allies, and we are more than ever convinced that this is the right policy; but for us to be asked to guarantee the payment of the whole of the German indemnity seems a suggestion which is hardly worth discussing. Professor Gide apparently includes the United States among the Entente Powers. Is it likely that either of the Presidential candidates across the Atlantic will adopt a guarantee of the German indemnity as a plank in his platform?

Returning to Professor Gide's views concerning the attitude of the wage earners, they are embodied in the following very interesting passage in his Memorandum:—*

"There is another condition which appears to me still more urgent than the withdrawal of notes or even the balancing of Budgets, if the economic condition of Europe is to be restored, viz., a willingness on the part of the working classes to work well, and the discovery of some means of securing from them a conscious co-operative effort. I have seen no reference to this point in the memoranda and notes which have been submitted to me. Doubtless it has been assumed that this question was not within the competence of the Brussels Conference, which is confined to financial questions. It must, however, be remarked that all the financial and economic solutions are contingent upon the resumption of work in Europe, and that this resumption will only take place if some satisfaction can be given to the working-class aspirations, which are difficult to understand, and which they themselves cannot define. Workpeople in every country are suffering from profound unrest, which seems to be founded upon a fallacy. They have been so constantly assured during the war that they would see the birth of a new world, that they are naturally sore on finding to-day that nothing has changed (except a rise of wages which is insufficient to compensate for the increased cost of living), and that they must resume again the same wage slavery as before."

It is to be regretted that so distinguished an authority as Professor Gide should have given his endorsement to the question-begging expression, "wage slavery," though it is possible that the translator has done him an injustice. The wage-earner is no more a slave than the salary-earner, or the professional, or even than the capitalist, since the latter cannot earn a profit unless the industry in which he invests produces some commodity which consumers want to buy. Co-operation, which is the real basis of our present economic system, involves a certain loss of freedom to all of us. And is it true that "nothing has changed except a rise of wages, which is insufficient to compensate for the increased cost of living"? In this country, at least, we hope and believe that one of the good things effected by the war has been a real and very long overdue improvement in the wage-earner's standard. But it is certainly very true that, as Professor Gide says, a willingness on the part of the working classes to work well is an even more urgent condition to recovery than the withdrawing of notes or even than the balancing of Budgets. At present they very naturally feel that they have been deceived owing to the wickedly foolish promises made, in this country at the

General Election of 1918, and elsewhere, doubtless, when it was thought advisable to "bamboozle the electorate." They see companies and firms making huge profits on and in paper, and forget that these profits, like their own wages, are affected by serious depreciation in buying power, and are also, unlike their wages, subject to very stiff rates of income-tax, super-tax, and death duties; and many of them think that they can, by slack and grudging work and frequently recurring strikes, secure the maintenance of the improved standard won during the war. If they continue to cherish this fallacy there is no hope for economic recovery, but they are quite as shrewd as most of us, and they are beginning to see that it does not work, and that by these methods they do not hurt the capitalist nearly as much as they hurt themselves and their fellows. The strong minority that voted against a coal strike, and the evident desire of responsible Labour leaders to avert it, are most satisfactory indications of a widening recognition that stopping or reducing output hits the workers. All the more reason why members of the well-to-do classes should not lecture the wage-earners as if they were doing something wicked in trying to secure the best possible terms for themselves. There is nothing wicked about it. It is what every producer of any commodity or service is entitled and bound to do, in normal times, as long as he does it honestly and fairly. But when the producer tries to get more than his industry or business can stand he makes a bad mistake, which costs him dear if he persists in it. Surely it is better to try to convince the wage-earners that they are now making this mistake than to represent the coal miners, as Mr Chamberlain has done this week in a letter to a new Birmingham paper, as trying to "plunder the community." Mr Chamberlain carries great weight in the country, thanks to the universal recognition of his honesty and sincerity. We should prefer to see him using his authority by putting the facts of the economic case before the workers, rather than by increasing the output of bad temper—one of the few commodities of which we now have a substantial surplus—by unnecessary and ill-timed abuse. Good temper and simple explanation of economic facts are the only remedy for the fallacies which are restricting output. Mr A. H. Gibson, in a very interesting paper on Credit Inflation and Prices lately read before the British Association, argues that "as labour consumes probably 90 per cent. of the fruits of production, it has everything to gain by intensified output, and everything to lose by wilfully diminished production." It would be interesting to know how Mr Gibson arrives at his figure of 90 per cent., but there can be no doubt that his main contention is correct. Wage-earners want houses, and bricklayers, by reducing output, make them scarce and dear, and so on all round. These are the simple facts that want putting before the wage-earners. They are not included in the agenda of the Brussels Conference, and the Professors who have written for it were right in making only a passing reference to this part of the economic problem. But might not they be asked for an exposition, for general distribution, of this most important matter?

OUR INDEX NUMBER.

A FURTHER drop in our Index Number follows last month's slight increase, the total having fallen to 7743 for the end of August, as compared with 7876 a month ago, and 7847 two months ago. This reduces the percentage figure to 352, the lowest recorded since the end of last year. How wholesale prices have moved in the past 12 months may be seen from the figures below, the total at the time of the Armistice being taken as 100:—

November, 1918 = 100.

1919.		1920.	
End of September	106	End of March	134
„ October	109	„ April	132
„ November	112	„ May	132
„ December	118	„ June	126
1920.		„ July	127
„ January	125	„ August	124
„ February	131		

The decline in August, as may be seen from our usual table below, was fairly evenly spread over the different groups, the miscellaneous section being the single exception with a slight increase:—

All cereals except home-grown wheat are lower. There was a seasonal decline in potatoes, and while beef and pork were slightly higher, mutton declined a few points. In the group of secondary foodstuffs tea and coffee both declined, but this was mostly offset by the increase in butter. Cotton is entirely responsible for the large decrease in the textiles group, for other movements are all slightly upward. American cotton, cotton yarn, and cotton cloth show a substantial fall, but in Egyptian cotton the fall is less pronounced. Silk, hemp, and jute, on the other hand, are higher, the first-named showing a sharp rise. In the minerals section the movements are insignificant, being slightly downward on balance. Movements in the Miscellaneous section comprise increases in oils, oilseeds and tallow, and a slight decline in rubber.

BREWERY PROFITS.

DURING the war period brewery companies very pleasantly surprised their shareholders by largely increasing their profits, in spite of the severe limitations on production, which, when they were first imposed, were thought to spell lower earnings. Generally speaking, brewery accounts for the year 1918-19 showed a check to the growth in profits, and in some cases an appreciable setback. But the latest batch of reports discloses that, with unlimited brewing once more permitted, the advance has been resumed in no uncertain fashion, despite the very heavy taxation which "the trade" has to shoulder. Below we examine the most recent accounts of a number of leading brewery companies. Some of the reports cover the year ended June 30, 1920, while some refer to the calendar year 1919, while one or two relate to a period closing even earlier. The most up-to-date reports, on the whole, show the best results, which suggests that the

Profits shown in the first column of the above table were earned not entirely, but mainly before the war, and, it may be said, wholly before the war produced any measurable effect on earnings. The increase shown in the last year in the aggregate profits of the 16 companies is nearly £2,000,000, or not far short of 50 per cent., while the increase on 1914 is over 100 per cent. The largest contribution to the latest advance is made by Arthur Guinness, whose remarkable profits we recently discussed in the *Economist*. But most of the companies in the list advanced their net profits very substantially during the latest period, and there is only one instance of a slight decline. Between them the 16 companies placed about £750,000 more to reserve, &c., than in the previous year, Guinness, Barclay Perkins, and Newcastle Breweries being prominent in this respect. Watney, Combe, Reid find it necessary to reserve only £243,000 for deferred maintenance and contingencies, against £350,000 a year before, but place £35,000 to a special account for redemption of capital. In some cases the reserve allowances include provision for excess profits, but, on the whole, the companies appear to have been reasonably conservative in the amount of increased profit distributed in dividends.

A final table shows yields on the securities of these 16 companies at present prices, and on the basis of latest dividends :—

* Yield calculated on a 10% basis. † £10 shares.

The quotations of the shares of some of the concerns that were struggling before the war have naturally risen strongly in recent years, but in the case of the more firmly established companies quotations generally are rather below the pre-war level. It is difficult to see any reason for predicting anything but a continuance of prosperity in the current year. The market has had one or two bursts of activity during the year, but quotations to-day are in most cases a long way below the highest touched in 1920.

Business Notes.

A Bank Amalgamation.—It was announced on Thursday that Messrs C. J. Hambro and Son and the British Bank of Northern Commerce have entered into an agreement to amalgamate as from October 1st next under the name of Hambro's Bank of Northern Commerce, Limited. The share capital will be £4,000,000, in £10 shares, of which £2 10s will be paid up, making a total issued capital of £1,000,000. Sir Everard Hambro, the senior partner in Messrs C. J. Hambro and Son, will be chairman, and Sir Eric Hambro vice-chairman. Mr H. Bendixson, who is vice-chairman of the British Bank of Northern Commerce, will be second vice-chairman, Mr H. Hambro and Mr Olaf Hambro will be managing directors, and Mr G. L. D'Abo, at present manager of the British Bank, will occupy that position in the amalgamated company. The firm of Hambro, established 120 years ago, is a private one, and no details are published as to its capital and resources. The British Bank of Northern Commerce was formed by a group of British, Scandinavian, French, and Russian banks in 1912, and has an authorised and issued capital of £2,000,000, of which £500,000 is paid up. On March 31st last deposits amounted to £16,209,043, while the reserve fund stood at £1,050,000, including £300,000 from a premium on 50,000 shares.

War Contributions of the Colonies.—A Treasury Minute dated August 4, 1920, sets out the contributions offered by Colonies and Protectorates towards the cost of the war, and states that the Chancellor of the Exchequer proposes to devote such sums as and when received to the cancellation of war debt. The contributions in question are as follows :—

Bermuda.—£40,000 payable in the form of an annuity of £3,450.

Ceylon.—Two contributions of £1,000,000 each—one payable by instalments of £100,000 annually for ten years, and another by such instalments as may be convenient to be paid within ten years.

Gold Coast.—£200,000 payable in ten annual instalments.

Falkland Islands.—A sum equal to one-tenth part of the Customs Revenue for the year annually for a period of ten years from January 1, 1917.

Straits Settlements.—£200,000 for five years from July 1, 1916, and for a further five years if the finances of the colony permit (so far the sums received have largely exceeded £200,000 a year, as the colony has contributed the proceeds of a special war tax in addition to this provision from general revenue).

Sarawak.—£5,000 annually for six years beginning April, 1919.

In addition to the above, the Protectorate of Nigeria offered to pay, if the financial situation should permit after the conclusion of peace, the charges for interest and sinking fund on a share of the Imperial war debt amounting to £6,000,000. The Colony of Jamaica has promised £60,000 a year for 40 years from the termination of the war to be applied in reduction of the war debt of the United Kingdom. Since the date of the Treasury Minute of December 31, 1917, all sums paid on account of these gifts have, with the assent of the colonies and protectorates concerned, been paid into the Exchequer as miscellaneous revenue, and have thus been available to reduce the amount which his Majesty's Government would otherwise have had to borrow for war purposes.

American Cotton Crop.—Our Manchester correspondent writes :—This week the Agricultural Bureau of the United States Government has published a report on the condition of the cotton crop on August 25th, the statement being 67.5 per cent., against 74.1 per cent. on July 25th, and 61.4 per cent. in August last year, the ten-year average for this time of the year being 68.2 per cent. The report as a whole was not equal to expectations, and prices advanced on the publication of the figures, but since then a weak tone has prevailed in the New York market. The statement is said to indicate a crop of 12,783,000 bales, but it is anticipated in trade circles that the commercial yield will be quite 13,500,000 bales, as compared with 12,443,000 bales for last season.

South Metropolitan Gas.—From a letter addressed to the shareholders of the South Metropolitan Gas Company by Dr Charles Carpenter, the chairman, we extract the following :—"The unjust sliding scale has now disappeared for good from the company's charter, its place being taken by provisions framed more in accord with present-day conditions. In substitution for an antiquated piece of legislative machinery (the need for which ceased long ago) which has wrought great and cruel injustice upon gas shareholders during the war, Parliament has now adopted the basis that capital invested in gas supply is as much entitled to a fair return for its use as is Labour for its service therein. It has fixed that return at 5 per cent. per annum in respect of the issued, and at 6 per cent. per annum in respect of the unissued ordinary stock of the company, which rates, under all circumstances, the shareholders will henceforth be entitled to divide. Profits earned beyond this will be divisible in the proportion of three-fourths to the gas consumers by way of reduction of price, and one-fourth in equal parts to the shareholders and co-partner employees. Both capital and labour will thus be encouraged to progressive effort, the one by extending business in all directions, the other by economical working and production. As a result it is confidently hoped that these bonus additions to, on the one hand, the standard rate of interest on capital, and on the other to standard rates of pay for labour, will become quite substantial."

Increased Cost of Stock Dealings.—Transfer stamp duties on Stock Exchange bargains became doubled from last Wednesday, September 1st, and on the same day there came into operation the revised scale for Stock Exchange commissions, which has the effect of increasing charges for brokerage on various British Government securities and registered stocks, including those of railway companies. The effect upon Stock Exchange business may be described as practically nil. In regard to the extra stamp duty, this might well have been imposed when the suggestion was put forward in the *Economist* some time ago, when considerable activity prevailed in the markets, and when the doubling of the charge for transfer stamps would have made a substantial difference to the revenue drawn from this particular source. The national Exchequer is not likely to derive appreciable benefit from the alteration until there is a revival in speculation. A certain amount of investment business goes on automatically all the year round, but a good part of it is turned into securities upon which no stamp duty is payable by the public. There are few Colonials, for instance, upon which transfer stamps are charged. In some of the short-dated issues recently made by the Colonies, the latter elected to have each transfer stamped as it is made, although this, of course, does not affect the public in any way. The bank where such an issue is domiciled has to send up its transfer books to Somerset House periodically for the transfers to be stamped, and this necessitates the use of a double set of books, one set remaining with the Inland Revenue for a fortnight, while the other is kept at the bank for purposes of daily transfers. The charge for stamps rests in these cases with the colony, corporation, or whoever the borrower may be. On the face of it, the probable effect of the double stamp duty should be to render more popular the inscribed and registered stocks, which can be transferred free of cost to the purchaser, who would be inclined to argue that the saving of 1 per cent. *ad valorem* justified his selection of a stamp-free security, as against Home Railway stocks, for instance, and others upon which the transfer duty has to be paid. Stock Exchange brokers admit amongst themselves that protest against the added stamps has been surprisingly little, and that their clients are accepting the alteration as inevitable, while, so far as the increased brokerage rates affect the public, it would seem that there is a fairly general consensus of willingness on the part of clients to acknowledge that the latest scale of commissions upon dealings is not onerous. The fact that the Stock Exchange Committee have not altered in any way the commissions upon transactions in shares, but have confined their atten-

tion to stocks, prevents the murmur which would probably have arisen had commissions on shares been advanced. The change which has just taken place has come about, it may be said, with a minimum of disturbance to business and protest from the public, and the fact of its having been introduced during the height of the holiday season has assisted in the acceptance of the increased charges by the public with no more than a ripple of discontent.

United Steel Companies.—The report for the year ended June 30, 1920, of the United Steel Companies, Limited, incorporated in March, 1918, as an amalgamation of several important iron and steel companies in the North of England, including the Workington Iron and Steel Company, shows a net profit of £745,661. Dividends from associated companies brought in £915,477, and sundry revenue £15,044, while administration expenses absorbed £38,007, and debenture interest £146,854. The previous report, which presumably covers the period from incorporation to June 30, 1919, shows gross revenue of £1,164,585, and a net profit of £956,632. How profits have been appropriated is shown in the table below :—

	1918-19.		1919-1920
	£		£
Gross revenue	1,164,585	..	930,521
Administration expenses and income-tax	48,133	..	38,007
Interest	209,820	..	146,853
Net profit	906,632	..	745,661
Brought forward	..	..	64,674
	906,632	..	810,335
Reserve and written off	41,822	..	119,369
Preference dividend	79,024	..	79,051
Ordinary dividend	721,112 (10 %)	..	507,042 (10 %)
Carried forward	64,674	..	104,873

Preliminary expenses amounting to £91,487 are written off, and £27,881 is transferred to reserve for sinking fund. The balance-sheet shows increases of £2,100,200 in creditors, which include advances by associated companies, and of £2,427,200 in advances to associated companies. The directors propose to acquire by exchange of shares the ordinary share capital of two more iron and steel companies, Daniel Doncaster and Sons, of Sheffield, and the Martino Steel and Metal Company, of Birmingham, and also £50,000 shares in Thomas Smith's Stamping Works, Limited, of Coventry. For this purpose the capital of the United Steel Companies will have to be increased by the creation of £413,915 ordinary shares.

Cuban Railway Fusion.—A circular has been issued to the shareholders of the United Railways of the Havana and Regla Warehouses, Limited, by the London manager, pointing out that in 1911 the company acquired a large interest in the Western Railway of Havana, Limited, and at present holds nearly 99 per cent. of the entire capital. In 1913 a large interest was also acquired in the Cuban Central Railways, Limited, and to-day the company holds 99 per cent. of the ordinary shares and 50 per cent. of the preference shares. The directors now propose to absorb these two undertakings, and, with this end in view, meetings of the Western and Cuban Central Railways are being convened, at which schemes for the absorption will be submitted for approval. For a nominal £100 of Cuban Central 5½ per cent. preference £110 5 per cent. cumulative preference shares in the United of Havana are offered, and for every £100 nominal of ordinary shares £71 10s of United ordinary capital. Ordinary shareholders of the Western will receive a similar nominal holding in the United. As far as debentures are concerned, Cuban Central Five per Cents. will be raised to a 5¼ per cent. basis, with redemption at or below par, instead of at 110, and interest on the Western debentures will be raised from 4½ to 4¾ per cent.

The Georgian Republic.—Georgia, which had a long and honourable history as a mediæval kingdom, is now entering on a promising career as a modern Republic. In 1783 the menace of Turkish conquest compelled its king to seek the protection of Russia, to which it was eventually annexed by the Tsar Alexander I. During the Russo-Japanese war it achieved a brief and imperfect control over its own administration, and, on the collapse of Russia in 1917, it promptly declared its independence, joined the Entente, and declared war against the Porte. The downfall of Turkey has removed one of its chief dangers; others are averted by its peace with Bolshevist Russia, which has formally recognised its independence, and with its neighbour, the new-born Republic of Azerbaijan. Internally, as we are informed on the best authority, there is peace and order; boards established by the Government regulate work and wages, and there have been no strikes since the revolution. The great majority of the Government and of the Constituent Assembly are Socialists of a moderate type. As in other States of the Middle East, stability is being promoted by the establishment of a peasant proprietary through a scheme of land purchase carried out by the State. No proprietor is allowed to hold more land than he can cultivate, the amount varying in different districts from 7 to 15 dessiatines (about 18 to 40 acres), according to the fertility of the land retained. A State bank was established last June, and there are various native banks, with one Italian and one British. A commercial mission is now in Europe, and is about to pay a second visit to London. The country specially needs agricultural machinery, textiles, and glassware, and is rich in manganese—the export of which, and of some other commodities, is a Government monopoly—tobacco, wool, and silk, of which last a large quantity goes to France and Italy. Wine is also an important export, and the cereal crop, which last year was poor, now exceeds the home need. A British Socialist Mission has just gone out, and whenever overseas travel is freed from its present hindrances, the country should attract a considerable tourist traffic. Meanwhile, it seems to afford a promising market for British goods, and its Government is desirous of attracting foreign capital. It is likely to enjoy great prosperity in the near future.

FRANCE. — RUHR COALFIELD — ESSEN OUTPUT — MEAT — SEA FISHERIES — A NEW OIL PIPE-LINE—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, August 31.

THE Polish victory has removed one of the causes of the anxiety France has felt for many months past in regard to the execution of the peace treaty by Germany. On one point, however, which is vital to the industrial life of this country, recent events have had no solacing effect, and that is in regard to the *bonâ-fides* of Germany in connection with the carrying out of the coal clauses of the treaty. There is a growing feeling here that, notwithstanding the fact that Germany's obligations in this respect have been relieved to the extent of something like 43 per cent. by the Spa Conference, she has no real intention of furnishing the coal France so badly needs for the restoration of her economic life. The possibility that France will sooner or later be compelled to occupy the Ruhr coalfield has therefore once more come into prominence. Germany has all

along pleaded that her inability to furnish France and the other Allied nations with the coal called for under the terms of the peace treaty is due to the falling off in her output, as compared with that of 1914. Herr Hugo Stinnes admitted at the Spa Conference, however, that German industry was receiving 85 per cent. of the coal it required, and investigation has since shown that this figure was far below the truth.

As a matter of fact, according to figures published here, many of the German industrial concerns, since the armistice, have more than doubled their output of 1914. The most striking example of this is that of the great Krupp works at Essen, which employed 33,000 men in 1914, and are now employing 54,000. Quite apart from the fact that Krupp's are now undoubtedly manufacturing 12-inch and other calibre guns, much the same as before the war, in spite of the express terms of the Versailles treaty, people here find it difficult to understand how Germany justifies her failure to furnish France with the coal to which she is entitled, when it is known that the consumption of coal and other materials by the Krupp works alone, in 1914 and 1920, is represented by the following striking comparative figures (covering the period down to the end of June in each year) :—

	1914. Tons.		1920. Tons.
Coal	1,500,000	..	2,500,000
Coke	1,558,000	..	3,763,000
Cast-iron	1,100,000	..	1,800,000
Iron ore	4,600,000	..	7,820,000
Fluxes	500,000	..	850,000

The returns from the Thyssen concerns show a consumption of 2,750,000 tons of coal during the first six months of this year, as compared with 2,000,000 tons during the corresponding period of 1914, and for the works under the control of Herr Hugo Stinnes of 2,500,000 tons of coal this year against 1,200,000 tons in 1914, and of 1,200,000 tons of iron ore this year, compared with 750,000 tons in 1914. In face of such figures it is not difficult to realise the tragic position of the French metallurgists. "Unless we can get combustibles," writes a leading ironmaster, "we are doomed to ruin. Obviously, if we have to pay 275f a ton for coke, we cannot compete even with the Belgians, who can buy it at 167f, to say nothing of the British and the Germans, who have coal in abundance. Unless some radical change is made, the whole of our export trade will be lost, and the French military victory will be transformed into an economic defeat." The situation is sufficiently explained, perhaps, to render it unnecessary to point out that a very strong and influentially backed movement may be expected in this country in the near future, having for its object a military occupation of the Ruhr coalfield, for the purpose of ensuring the carrying out by Germany of the coal clauses of the treaty.

In view of the fact that, as the direct result of the war, the national yield of meat of all kinds has now fallen some 400,000 tons below the amount normally required to meet the consumption of the population, close attention is being paid to the best means for meeting the deficiency. In this regard, the problem is seriously complicated in France owing to the extraordinary lack of anything like adequate cold storage organisation which is a vital factor in any country that is compelled to draw any substantial proportion of its meat supply from across the seas. As matters stand France possesses to-day cold storage capacity of something like 200,000 tons. France is also seriously lacking in refrigerator cargo boats. In order to make up her deficit of 400,000 tons in native grown meat, France is able to count on perhaps 50,000 tons from Madagascar, Senegal and Algeria, but the balance of 350,000 tons must be procured elsewhere, and largely conveyed in foreign bottoms, as the maximum that could be transported in the existing fleet of French refrigerator boats is only 200,000 tons.

This triple problem of the shortage of meat, cold storage warehouses, and cargo boats fitted with refrigerating plant, has resulted in the organisation at Lorient, the great Brittany fishing centre, of a "Fish Fortnight," for the purpose of developing and popularising the use of fish as food. The manifestation, which began on Saturday, has been directly organised by M. Paul Bignon, the Under-Secretary for the Merchant Marine, who is keenly interested in the possibilities offered by the wider industrialisation of the fishing trade. Starting with the proposition that France, with her 1,700 miles of coast-line, ought to be able to furnish herself with more than enough fish to make up for the deficit of meat, and thereby avoid having to spend something like 2,000,000,000f a year on imported meat, M. Bignon has focussed his attention on the need for replacing the primitive fishing smacks that are so largely used in France with numbers of steam and motor trawlers, such as are used so largely round the British coasts. The British fishermen, he points out, with a much smaller number of vessels than those possessed by the French, are able, owing to the fact that something like 95 per cent. of their boats are fitted with steam, to draw a harvest of some 900,000 tons of fish per annum, or twice the amount of the yield from the French fishing fleet. Further, owing to the lack of cold storage facilities, the French fishermen are often obliged to throw much of their catch back into the sea, while for the same reason, in 1918, at the Paris Central Markets alone, 547 tons of fish, after it had been brought to Paris, had to be destroyed as unfit for consumption. Simultaneously, the Third National Cold Storage Congress (which begins on Thursday) will also take place at Lorient, so that, under the energetic impulse of the Under-Secretary for the Merchant Marine, there is good reason to believe this novel "Fish Fortnight" will produce really practical results in more than one direction.

The Presidential decree authorising the construction of a pipeline for the transport of mazout or crude petroleum from Havre to Paris has now been signed, and it is expected that the work will be commenced within the next two months and completed in a year. The pipes will pass by way of Bolbec, Yvetot, Barentin, Rouen, and Pontoise, and will be constructed to deliver 2,400 tons of mazout per day. The reservoirs that are to be built to contain the petroleum at Havre and in the Paris district are to have a capacity of 60,000 tons. Branch lines are to be installed at certain points on the route of the pipeline for the purpose of serving those districts passed through which have need of this form of combustible.

At the outset of the week the Bourse was markedly firm, owing principally to the Polish victory, but later, as a result of the uneasiness felt in London at the Irish agitation and at the threatened mining strike in England, there was considerable depression. French Funds have remained firm, 3 per cents. standing at 57, 1917 4 per cents. at 71.45, 1918 4 per cents. at 71.15, and 5 per cents. at 102.25. Banks have shown a tendency to decline, Banque de France dropping from 1,255 to 1,180. Shipping has shown a certain improvement, Chargeurs Réunis advancing from 1,274 to 1,307, and then dropping back to 1,292. Messageries rose from 418 to 441. Electrical undertakings have varied, Thomson dropping back from 1,180 to 1,160, and the Générale d'Electricité rising from 1,115 to 1,152. Metallurgical shares have generally fallen, Métaux dropping from 1,400 to 1,355, Longwy from 2,005 to 1,970, and Chantiers de la Loire from 1,680 to 1,640. Tintos are back at 805. Petrol shares have shown a considerable improvement, though without attaining their previous high level, Mexican Eagle rising from 607 to 502, Royal Dutch from 33,950 to 35,700, and Shell from 363 to 417, to finish at 397.

The returns of the Bank of France for last week, the previous week, and the corresponding week of 1913 are as follows :—

GERMANY.—POLITICS—COAL—EXCHANGE AND BOURSE—TRADE CONDITIONS—POTASH—STATE TRADE ENCOURAGEMENT.

(FROM OUR CORRESPONDENT.)

BERLIN, August 26.

THE conflict between Germans and Poles in Upper Silesia, which is not purely racial, but is partly religious and social, during the past week threatened to take sharply anti-French forms, and promises new international complications. It is beginning seriously to affect local industry, which up till now, at least in the dominant coal, iron, and zinc branches, has resisted the general industrial stagnation better than industries in the West. The Silesian coal output (until last month, when already disorder weakened it) was satisfactory; and an agreement was lately come to for extra mining shifts, which promised six million tons more a year. The Silesian ironworks and steel mills reported that they had orders for a long time ahead. The Ruhr coal production in July was 110,000 tons more than in June, and 860,000 tons more than in July, 1919; but the output per shift fell 8 per cent., as a result of irregular working of the extra shifts arranged for in March. A new agreement has been come to with Ruhr miners, under which employers will take on their shoulders 4½ m. per shift hitherto borne by the State. The March extra-shift agreement will be extended to all Ruhr mines. The Rhenish-Westphalian Coal Syndicate reports that coal deliveries to the Entente have now reached the level of the Spa agreement. The Federal Coal Council has decided to allow industry only 70 per cent. of the pre-Spa ration, the deficit being made up of Central-German or Saxon brown coal or brown coal briquettes. The Government has recommended all industries to prepare themselves for use of brown coal as rapidly as possible; and it is announced that Krupps will adapt a great part of their works to this fuel.

The foreign exchanges last week registered their highest point since the decline of March-May, sterling selling on the 23rd at 184.20, and the dollar at over 51, since when there has been a drop, sterling to-day touching 174.20. The proposal to establish trading in foreign exchange for future settlement on the Berlin Bourse has at last yielded a definite plan, the chief feature of which is the establishment of a "Liquidation and Guarantee Fund," with a capital of half a million marks, to which members will contribute, according to the dimensions of business, sums between 250,000 and 2,500,000 m. Ten per cent. will further be paid as security for engagements for a month; and for the chief foreign currencies an official monthly ultimo course will be quoted. Berlin Stock Exchange, in accord with the exchange movement, but checked somewhat by the Silesian troubles, has been, on the whole, upward. Averages are now not far short of the year's highest. The sum quotations of 10 loans and 25 interest-paying securities, which on March 1st was 13,722, and on June 1st only 9,557, was 12,721 on August 14th, and 12,431 on August 21st. In connection with fusion plans, most of the stocks of the big mixed coal, smelting, steel, and finishing metal companies have risen sharply during the past three months:—

	June 1st.		August 26th.
Bismarckhuette	360	.....	632
Laurahuette	190	.....	339
Mannesmannröhrenwerke	303	.....	435
Phœnix	347	.....	463
Rheinische Stahlwerke	293	.....	386·25
Gelsenkirchenr Gusstahlwerke	415	.....	694

Oil stocks showed large advances at beginning of the week. The mining and iron rises were influenced by a boom in Bochum Gusstahl (Cast Steel), due to attempts at capture by other companies. The price movement of State loans during the present year has been:—

	Dec. 31, 1919.		May 31, 1920.		Aug. 26, 1920.
5 % German War Loan	77.50	..	79·75	..	79·50

THE MECHANICS & METALS NATIONAL BANK

OF THE CITY OF NEW YORK

Capital (fully paid), Surplus and undivided Profits

$25,000,000

This Bank finances exports and imports, buys and sells foreign exchange, cable transfers, etc., and makes collections on all parts of the world.

LONDON CORRESPONDENTS:

London Joint City and Midland Bank, Ltd.
London County, Westminster and Parrs Bank, Ltd.
Barclays Bank, Ltd.

was founded in 1919 with a capital of 400,000,000 marks, the company is entitled to issue bonds to a tenfold larger amount. On the security of these bonds, money is borrowed from the Darlehnkassen, and the yield is devoted to buying loan stock.

The bad condition of business is reflected by the condition of the Leipzig autumn fairs. The former single fair is this year organised into two separate fairs, one for technical appliances and processes, which has partly the character of an exhibition, and the other, a general (selling) fair. The first showed a great many new fuel-saving appliances and labour-saving machine tools. The space provided for exhibitors was far from filled; the attendance of foreigners was small, and little business was done. The general fair space is fully occupied by 12,000 exhibitors, but buyers entirely dominate the market, and little selling is being done. Weak foreign trade has compelled the Government to cut down several more of the export duties. The duties on iron construction and bridge parts, boilers and reserve parts, iron, gas, and water reservoirs, marine buoys, iron brewery vessels, and aluminium-alloy goods have been reduced to 2 per cent.; on concrete ships to 1 per cent.; on firearms to ¼ per cent.; on wire springs, wire brushes, hooks, metal box-handles and other small articles of this class to 6 per cent. A report on the iron foreign trade trade shows that those exporters who invoiced their goods in currency of importing country reaped enormously greater profits than those who invoiced in marks, the difference, of course, varying with the exchanges. In February, when the mark was lowest, foreigners in countries with high exchanges who agreed to pay in their own currency were paying 9 marks a kilo more than foreigners who were charged in marks; but the excess fell in May (after the mark's recovery) to 21 pf. Buyers in countries with low exchanges, who were usually charged in Reichsmarks, were in May paying prices 100 per cent. more than buyers in countries with high exchanges. This led in midsummer to a general underbidding of Germany by America and England in the former Austrian countries and in the new Baltic States. Since then Germans have agreed to sell to these countries at the lower German home prices. The potash export trade, upon which Germany must largely count to correct her passive trade balance, is in difficulties owing to refusals of Americans to pay the high price demanded by the new compulsory Potash Syndicate. The syndicate lately tried to double its dollar prices, although its component companies this year announced profits between five and ten times greater than in the financial year 1918-19, this as result of the high yield of marks of dollar payments. Sharp attacks are being made on the syndicate for not diverting its abnormally big foreign profits to the cheapening of potash for home agriculture.

A Commission of the "Reichswirtschaftsrat" has reported that the present industrial-commercial stagnation is due, as far as the home market is concerned, to underconsumption, not to over-production; and that the only cure is a reduction of the price level. Concrete measures recommended are prohibition against dismantling of idle factories, and against closing down of factories without an experts' certificate declaring closing inevitable, the giving to manufacturers of public orders for goods on condition of fixed prices, the compelling of raw material companies to sell to manufacturers at prices corresponding to market conditions, and the advancing of working capital on security of manufacturers' stocks. For particular industries are recommended regulation of the wood trade with aim of supplying paper mills at bearable prices, and establishment of a leather monopoly, and meantime official controlling of leather sales with aim of ensuring cheaper leather for boot factories. Preparations for restoring the commercial fleet are also recommended.

CANADA.—FREIGHT RATE INQUIRY — THE RAILWAY CASE—DIFFICULTIES OF THE PROBLEM—CROP CONDITIONS — LATEST REPORTS — A SUPER-FARM—STOCK MARKETS AND BUSINESS CONDITIONS — THE INDUSTRIAL OUTLOOK—GOLD SHIPMENTS TO U.S.—THE TARIFF COMMISSION AND THE FARMERS' CASE.

(FROM OUR CORRESPONDENT.)

OTTAWA, August 19.

AFTER the junketings and oratory of the Imperial Press Conference Ottawa is now back to stern and prosaic realities in the shape of a railway rates inquiry. On August 10th the Dominion Railway Commission began the public hearing of an application by the railways who, operating conjointly under cover of the Canadian Railway Association, ask for an increase of 40 per cent. in freight, 20 per cent. in passenger rates, and 50 per cent. in sleeping car charges. The original application had been for a 30 per cent. in freight rates, but since it was filed the railway employees in Canada as the corollary of an award by the Railway Wage Board at Washington, are due to secure a large increase in wages, with the result that the railways declare a 30 per cent. increase quite inadequate to the new conditions.

The railway case was comparatively simple. Their counsel claimed that operating costs had far outpaced any increase of revenue since 1914; they had risen 100 per cent., and freight and passenger rates had only been increased 31 per cent. and 15 per cent. respectively. The C.P.R. president, Mr E. W. Beatty, who was formerly its chief counsel, outlined the situation from his company's point of view. He showed that the ratio of operating expenses to income had risen from 63.87 per cent. in 1916 to 81.39 per cent. in 1919. During the first six months of 1919 it had become as high as 93.10 per cent., and even if the full application were granted would still be at least 84.6 per cent. for the whole year. Expenditure had risen in an alarming manner from $87,000,000 in 1916 to $143,000,000 in 1919, and was steadily mounting. He thought that in two years' time there might be a reduction of operating costs. Mr Moule, of the C.P.R. statistical department, produced a plethora of statistics to confirm Mr Beatty's statements, and gave figures of the actual increases in costs of labour and raw material. He stated that in 1920, under existing rates, the C.P.R. would scarcely earn its operating expenses, and if it continued to meet its charges and pay dividends on last year's scale would face a deficit of $37,450,672. If the full increase asked for was granted, and an anticipated increase in freight of 20 per cent. during the second half of 1920 materialised, the C.P.R. surplus for 1920 would only be $4,731,771. He claimed that the company had made every effort to economise, and had 10,000 less men on its pay-roll than in 1913. Mr Howard Kelly, president of the Grand Trunk, and Mr D. B. Hanna, the chief execu-

tive officer of the National system, gave evidence in similar terms.

The railway case was attacked from various angles. Counsel for the Ontario farmers showed the effect of the increases on the farming industry, whose prices are fixed in outside markets. Mr Blain, a leading wholesale grocer in Toronto, asserted that the nominal amount of the increase would be twice or thrice as much by the time it reached the consumer because the wholesaler, jobber, and retailer each calculated his profit as a percentage of the value of the commodity, plus the freight rates. Others contended that the C.P.R. should be judged on its own merits, and the inevitable deficits on the National system met out of public funds. There was an adjournment of four days to enable the anti-railway forces to prepare their case, and when the hearing was resumed the C.P.R. statistician was subjected to a rigorous cross-examination by Mr Symington, the very able counsel representing Manitoba. He managed to elicit some interesting admissions, the chief of which was that the C.P.R. had built up an accumulated surplus of $317,000,000. Of this $116,000,000 was liquid, consisting of $53,000;000 cash, $16,000,000 in accounts collectable, and $37,000,000 in Government securities. $160,000,000 of the surplus was in the form of deferred payments on lands or lands yet to be sold. Against these assets stood $27,000,000 in due accounts, and $52,000,000 in note certificates maturing in 1922 had to be provided for. It was also admitted that C.P.R. operating expenses were much lower in the West than in the East, and the western representatives contended that if any increase was granted a lower rate should prevail in the West. Counsel for interests in the Maritime province made a similar plea, taking the ingenuous ground that the Intercolonial Railway had been built as a condition of political union and ordinary business terms should not be applied to it. The C.P.R. witnesses also admitted that their system was in better condition than in 1913 and subsequent years, when the train mileage was higher, and that it was much superior to the state of any of the American roads. Representatives of various industries, urban and rural, have appeared before the Commission to protest against the increase, and have each in turn claimed that it would have calamitous effects upon their particular industry. The Manufacturers' Association would be willing to concede part of the application, but they fear that if it is granted in full, British competition taking advantage of water transport will become very formidable in territory adjacent to the seaboard and the Gulf of St Lawrence. The increase is bound to fall with disproportionate severity upon the population living in the central regions, and if the statements of Mr Walker Hines, lately Director-General of the American Railways, and Mr R. W. Woolley, of the Interstate Commerce Commission, as to the cumulative effect of freight increases are correct, the cost of living is bound to be seriously affected in an upward direction, and the present basis of wage adjustments and manufacturing costs will be badly disturbed. The inquiry is still proceeding, and while it may conclude by the 21st an early decision is not expected. The C.P.R. case had been severely shaken by to-day's evidence, and it is unlikely that the whole application will now be granted. The railways of the National system are clearly in a hopeless position as far as making both ends meet.

East of the Great Lakes most of the grain crop has now been reaped, and farmers are busy with threshing operations. There is general satisfaction with the crops, though the yield of hay is somewhat light. The fruit crop is excellent, and will bring good returns. In the prairie provinces harvesting is now general in Manitoba, in most districts of Saskatchewan and in Southern Alberta. Another week or ten days will elapse before the crops in the N.W. and S.W. corners of Saskatchewan, and in the northern half of Alberta, are ready for the binder. Weather conditions have been exceedingly favourable during the past fortnight, and in many districts a marked improvement has been visible, fields which were regarded as unlikely to repay cutting, promising to yield eight or ten bushels per acre. The latest crop survey of the Manitoba *Free Press* finds that 74 points in the province report an average wheat yield of about 18 bushels per acre, the lowest being five and the highest being 40. Rust has appeared in a number of localities, but has fortunately come too late to do serious damage.

Alberta is this year in the best case of all three prairie provinces. The wheat crop will probably average at least 20 bushels per acre, and in the area south of Calgary, which suffered badly from drought in 1918 and 1919, many farmers have crops exceeding 40 bushels per acre. The province has also an enormous hay crop, and there will be no repetition of last year's desperate problem about feed for live stock. Throughout the West oats and other coarse grains make, like wheat, a somewhat mixed showing. In Alberta there have been many fine crops of winter rye. The flax crop is very disappointing in all provinces, being thin and weedy. The experts still keep to their estimate of a total wheat crop for the West of about 240 million bushels. Trading in futures has been in full swing this week on the Winnipeg Grain Exchange, and prices for No. 1 Northern have been ranging a little below $2.70. There are some enormous farms in the West, of which possibly the largest is called the Noble-ford. Mr Noble was a farmer who won a bet that he would grow over 50 bushels to the acre on 1,000 acres, and won the bet in 1915 by growing 52 bushels. To-day he has 8,000 acres of wheat, 2,000 of oats, 3,500 of winter rye, and 6,000 acres in summer fallow. Off this farm alone there will be reaped 350,000 bushels of grain, and he has 6,000 acres in crop elsewhere. To save a long haul over indifferent roads he is installing an aerial railway to carry part of his crop to the granaries.

After a severe setback Canadian stocks have been somewhat firmer in the past week, but trading on the exchanges has been within comparatively narrow limits. The paper stocks are still active, and have kept life in an otherwise listless market. There have been rumours, still unconfirmed, that the Northcliffe interests have purchased the holdings of one of largest paper companies operating on the North shore of the St Lawrence. Now that a satisfactory crop is well assured, a resumption of activity on the stock exchanges is looked for in the autumn. Manufacturers and wholesalers still find business quiet, but there are signs of impending briskness, and in the West, especially in Alberta, good orders are flowing in from country merchants whose territory has an abundant crop. Money rates are still high, and there will be little funds available for investment till the western crops have been finally moved.

Industrial prospects for the winter are none too bright in certain directions. The Canadian Car and Foundry Company has just shut down all its plants in the Montreal area, and several thousand men are out of work. The nominal cause is some labour dispute, but there is also a shortage of orders. However, the Canadian Woollen Manufacturers' Association has just secured an order from Roumania for more than $7,000,000 worth of goods, which will help the textile factories. It is now disclosed by the U.S. Government that Canada's gold shipments across the border during the financial year ending June 30, 1920, amounted to $39,700,000, which would only have made up, if applied thereon, a small fraction of Canada's unfavourable trade balance. During the same 12 months Canada imported from the United States $861,100,000 worth of goods, and exported $488,900,000, leaving an adverse balance of $372,200,000. In the last six years Canada has shipped in all to the United States gold to the value of almost one and a-half billion dollars, distributed as follows :—

Fiscal Year Ended June 30—	$
1915	218,900,000
1916	579,300,000
1917	515,000,000
1918	102,900,000
1919	36,500,000
1920	39,700,000
Total	1,492,000,000

When the Tariff Commission holds its sessions in Winnipeg, on September 15th, the United Farmers of Manitoba will present a detailed case against the existing tariff system. They will demand, among other things, the removal of duties on all instruments of agricultural production, and the elimination by gradual stages covering five years of the tariff on all British imports.

GREECE.—GENERAL CONDITIONS—THE BOURSE—FOREIGN EXCHANGE RESTRICTIONS REMOVED—MORTGAGE BANKS.

ATHENS, August 21.

THE treaty of peace with Turkey, signed in Paris between the Allies and Turkey, restores Greece to an important part of its ancient territory, which had been under Turkish rule for nearly 500 years. A new era is thus opened to Greek enterprise, which is reflected in an optimistic spirit prevailing throughout the country. Foreign trade is now in a satisfactory way, but official up-to-date statistics are unfortunately not available. The money circulation is very nearly the same as at the end of last year, when it had been estimated that the per capita circulation was 240 drachmas, a figure relatively small as compared with the circulation of other European countries. The increase in circulation since 1915 has been about fourfold, though the system of payments by cheque has not been introduced in Greece during the war, as it was done in other countries, and the area into which the Greek drachma is used as a medium of exchange has been considerably extended since that year. Consequently, the money market is very tight. The National Bank of Greece's official discount rate is now 6½ per cent., but other banks and bankers are discounting at higher rates. Some complaints have been heard from interested parties for the stringency of money, and a plea for an increase of the circulation is made. Cost of living has not advanced since the end of last year. No estimates exist as to the increase of the cost of living since 1914. One can, however, safely put the increase at, roughly, 300 per cent. Thus, the increase of money in circulation and of the cost of living, since the outbreak of the war, seem to be equal or very nearly equal. Shipping profits and remittances from Greeks established abroad, which constitute the chief items of invisible exports, and largely contribute to a favourable balance of trade, continue on an increasing scale.

A general fall in prices has prevailed in the stock exchange for some time lately. An exception is marked in Greek bonds, especially of the older gold bonds, which have rather gained some points. It was expected that the interim dividends for the half-year, paid by the banks and the various companies, and which were on the whole very satisfactory, would have influenced the market favourably, but the undertone is still weak.

By a Royal Decree all restrictions imposed during the war and after on the free movement of capital to and from abroad have been removed, the only restriction still left in force being the prohibition of the import of depreciated foreign paper money (roubles, crowns, levia, lei, and Turkish pounds). Consequently, the buying and selling of foreign exchange, and remittances abroad, are no more subjected to any formalities at all, exactly as it used to be before the war.

The Government presented to the Chamber during its last session a Bill providing for the establishment of mortgage banks. The Bill is now law. Its aim is the development of credit based on real estate. Loans against mortgages were hitherto made chiefly by the National Bank of Greece. But a number of private persons were making it a profession of giving such loans, usually at exorbitant rates of interest and on exacting terms of repayment, in consequence of which the borrower was very often evicted from his property. The new law is expected to remedy this situation, and to promote the building of new houses and the acquisition of new ships, by creating capital available for that purpose on easy terms, and by simplifying the proceeding required for the registration of the mortgages and the fulfilment of the necessary legal formalities. The banks to be created under this law will have a capital of 10,000,000 drachmas at least. They will have the right of issuing mortgage bonds, backed by loans on first mortgage on buildings, building plots, and ships. The maximum nominal value of bonds they are entitled to have at any time in circulation cannot exceed ten times the total of their paid-up capital, and their ordinary and special reserves. Should the amount of bonds in circulation at any time exceed the total value of loans secured by mortgages, the excess has to be covered by one or more of the following assets: actual cash, Treasury bills, Greek bonds, bonds of the National Bank of Greece, and bonds of other limited companies, secured by real property.

SWEDEN.—THE IRON INDUSTRY—STOCK EXCHANGE DEPRESSION—IMPROVEMENT IN EXPORTS—FAILURES.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, August 21.

THE glint of hope of an improvement in trade conditions which was traced in the Swedish iron industry during May and June last has now vanished, and prices have gone back to what they were in April last. The last week has been characterised by a series of exceedingly gloomy days on the Stock Exchange, and the loss in values must have been considerable. One of the leading Swedish trade journals calculates the depreciation in stock values since the beginning of the year at an average of about 8 per cent. per share, which is quite considerable when taking into consideration that most shares had already declined enormously at the turn of the year. The market value of the shares of many of the leading Swedish concerns is now standing at or below par, so, for instance, those of the Stockholms Superfosfat, which are quoted at 475 (500 par), Allmanna Svenska Elektriska 100 (100 par), Baltic 46 (100 par), Bofors-Gullspang 85 (100 par), Gasaccumulator 70 (100 par), L. M. Ericsson Telephone Co. 73 (100 par). Several of these companies gave last year substantial dividends, for instance, the Superfosfat as much as 50 per cent., A.S.E.A. 12 per cent., or enough to compensate the shareholders for the coming year's meagre results, because even if an improvement sets in, the taxes which will be levied by the State will absolutely prevent any huge net profits being made. One consolation is, however, the admirable result of the Swedish export trade, for the first half of this year, registering a rise of over 400 million kr value. Calculating for the sake of comparison with pre-war prices, there is still an increase in the export values for clothes and textiles of 9 per cent., for unwrought timber 10 per cent., for paper 35.8 per cent., and for minerals 28 per cent., whereas cattle, grain, hides, and leather show lower figures. Reports about new formations and increase of capital for old concerns are now very rare, and the only notable one of late is the Falu Yelefabrik, which has increased its capital from 1.5 to 3 million kr. No doubt the advice issued by the State Bank in this respect is having a wholesome influence on the situation generally. On the other hand, cases of payment suspensions and failures are frequent. The other day it was reported that the large A. B. Thulin works, with 6.6 million kr share capital, had suspended payment. Efforts are being made to reconstruct this concern. In view of the high cost of fuel, the State railways have decided to restrict materially the number of trains running after September 15th next, without, however, causing the public too much inconvenience. The strike in the mining industry has come to an end, and work has been resumed in the mines and at the shipping places on practically the same conditions as before, but in the building industry efforts of conciliation have so far failed.

DENMARK.—A COMMISSION ON EXCHANGES—THE HARVEST—BREAD PRICE REGULATIONS.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, August 27.

WITH the £ at 25.50 and the $ at 722.00, it is hardly to be wondered at that the Danish Government has decided to take some steps with a view to improving the position. The Minister of Commerce has decided to appoint a Commission, which is to lay before the Government proposals tending to improve the Danish exchange. It is to be hoped that the Commission in question, the composition of which has not yet transpired, will press on with its task, for matters are very unsatisfactory. The above exchanges are those of the 25th, and they have since receded a little, the £ to-day being at 25.15 and the $ at 705.00; Swedish kr have gone back from 144.00 to 143.00.

Luckily, the harvest promises to be fairly satisfactory, the reports for all kinds of grain showing an average crop or a little over. The same applies to potatoes, turnips, &c. The Government has introduced a new Corn Bill, which maintains the prohibition against using for fodder,

or exporting, corn suitable for bread. The Government is to take over the wheat and rye production for 1920, and to fix prices for flour and bread. The present prices for bread remain in force up till April 1st, when the price of an 8-lb rye loaf is raised 30 öre. The arrangement will entail a State expenditure of 90,300,000 kr. This expense or loss on rye bread, the national Danish loaf, will be almost counterbalanced by profit on wheat, by tax on export of other kinds of grain, malt, &c., which sources of income are calculated to yield some 70,000,000 kr.

Letters to the Editor.

THE WORLD'S MONETARY PROBLEMS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I notice in last week's *Economist* that Mr Frank Morris, while discussing your leading article under the above title, and dealing with Professor Cassel's memorandum, indulges in the popular but very undesirable habit of supposing that the "worker" is chiefly responsible for our monetary difficulties. Perhaps I may be attributing rather more to Mr Morris' remarks about the worker "trying to avoid the simple truism" than the remark was intended to imply. But it does imply that the worker as distinguished from other members of society is to blame for trying not to recognise the truth. This method of throwing the responsibility for social mismanagement on to any particular class, such as "workers" or "capitalists," is greatly to be deprecated as a most futile method of approaching any economic question; and it too often leads to extravagant and altogether false generalisations, such as those about the workers in the letter by Mr J. E. Havens in the same issue of the *Economist*.

I gather from the expression of opinion by the working men of my acquaintance, that the worker appreciates the futility of the upward scramble of prices and wages quite as much, and desires its cessation quite as honestly, as does any business gentleman or learned economist who contributes to our social enlightenment. But unfortunately he does not see any better than the other learned gentlemen how it is to be prevented. Nor do I see what right Mr Morris has to expect that he should.

Still, he may be right in expecting our economic salvation to come from the worker. For the guiding lights of the learned, though many and variously coloured, throw but a pale and confusing illumination upon the dark places of economics. For instance, Mr Morris tells us the "world view about wages is psychologically wrong." Yet a little further on he says, "the demand of the workers for a standard of living" puts up wages and makes prices unnaturally high. So it seems the worker knows better than the "world," and realises that what he wants is "what money will buy."

Mr Morris, on the other hand, seems to fall into this worldly error, for he says that "this natural rate of wages .....depends upon the amount of currency." No doubt he means that is so if the amount of currency issued depends on the quantity of goods produced ("production"). But how could it so depend? There is no earthly connection between quantity of goods and value or quantity of money. If there is, will Mr Morris tell us what value in money a ton of goods is worth?

Obviously he must first know what value or price the ton of goods is supposed to be; and that can only be known by finding how much money will be given for it. If the issue of paper money of merely nominal value is to depend on the value of the ton of goods, and the value of the goods is to depend on the issue of money, I do not see how the value of either is to be determined.

I agree with Mr Morris in thinking there is a natural wage depending on a natural price, which price depends upon the amount of *labour* embodied in the goods and gold (the price) respectively. But without that labour-value on both sides of the equation there can be no *natural* price. Unfortunately, if there is any class that it would be just to blame more than others it would be the economists who have taught the worker that the price of things does not depend upon the labour they have cost. And therefore it would be most unreasonable for them to demand that the "worker" should correctly know the *value* that he can get out of the "pint pot" that his labour has helped to fill.—Yours faithfully, ALBERT WALLIS.

Westacre, Kettering, August 30th, 1920.

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3

Capital Authorised	£3,000 000
Paid Up Capital	1,050,000
Reserve Fund and Undivided Profits	1,146,430

Branches:

INDIA, BURMAH, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.

On **Current Accounts** interest is allowed at 2 per cent. per annum on daily balances.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

Ticket.	Account.
September 14.	September 15.

September has entered with little encouragement to Stock Exchange markets. The most pressing competition of the moment is the crisis in the coal trade, and on account of this many industrial shares are inclined to droop, although brief spasms of firmness occur now and then to illustrate the narrowness of markets in which a very small demand has an immediate effect upon prices. Movements in the New York exchange brought about rises, ranging from 2 to 20 points in the prices of most of the dollar securities. Business on the whole has been meagre, and there is no disposition yet to discount the end of the holiday season. If the miners' strike does come to a head, on or before next Saturday fortnight, the Stock Exchange recognises that it would not be long before business throughout the country became more or less paralysed.

British Government stocks are a trifle easier, although a decline in the War Loan was partly recovered. The Stock Exchange is hoping that the autumn may be negotiated without the necessity for the Bank of England to raise its rate, but the possibility of an 8 per cent. minimum is not entirely ignored. Quotation of the Victory Bonds ex dividend has given the price a cheap appearance, and a number of Foreign Government bonds are also ex their coupons due September 1st. The deductions have had no effect, however, in bringing in fresh buyers at the lower figures. An exception to the general heaviness amongst Government issues is afforded by Mexicans, which improved on more hopeful advices from Washington in regard to the Mexican prospect. Japanese 4½ per cents. fell back, after their sharp rise, on what is described as profit-taking.

In spite of the coal outlook, the market for Home Railway stocks manages to keep fairly steady. The position is not unlike that of the good man struggling with adversity, and the buying which comes in consists mainly of small orders. In spite of the handsome yields now available from the dividend-paying stocks, the market is certainly in a tender condition, and its supporters admit that they are afraid to trust it far. Canadian Pacifics have moved up with Americans. Grand Trunks and Mexican Rails remain somnolent. Argentine Railway stocks have fallen on dull days, to the disappointment of those who bought the stocks three or four months ago for purposes of speculative investment; a little offering found the market unwilling to take the stock. On the other hand, Great Western of Brazil shares and United of Havana stock have advanced, owing, in the first case, to the revision of the contract with the Brazilian Government, and, in the second, to the fusion with the United of Havana of the Cuban Central and Western of Havana undertakings.

The rubber market goes softly, owing to the continued heaviness of raw material. Evidently the American manufacturers have got as much rubber as they require at the present time, and the demand from Central Europe has still to materialise. There is no outstanding feature on the week. Oil shares have been the most active, and, on the whole, the firmest market in the House. The rise in the price of petrol is hailed as a bull-point for profits, and every unfavourable development in regard to coal is regarded as a fresh advertisement in favour of oil as a fuel. Several important new companies are known to be on the stocks, and the speculative investor takes oil shares on any noticeable fall in prices. A sharp rise occurred in textiles on premature hopes of immediate settlement of the coal dispute, but the advances were not maintained, while in the shipping market, which is also influenced by the miners' action, the changes on the week are negligible. Demand from the West of England caused recovery in the iron and steel group. Vickers and Armstrongs participated in the firmness, but here, again, the market did not hold, and prices soon slipped back. A jump occurred in Van den Berghs, to the accompaniment of rumours of a cash bonus in the near future. Insurance shares are heavy, and in the banking market business has dawdled to a minimum. Australian and New Zealand shares are better. There has been a partial recovery from the flatness which occurred amongst electrical manufacturing shares in consequence of the threatened lock-out in the trade, and a slightly better tone is apparent in electricity supply shares, owing to the declaration of an increased interim dividend by the City of London Company. Motor shares are not quite so weak as they have been recently, but in the absence of general business, the various sections of the industrial market, apart from that devoted to oil shares, are listless.

Gold keeps up in price, which is more than can be said for the majority of the shares in the Kaffir Circus. These have been under the influence of a fresh outbreak of selling in Paris, said to be due to fears of the situation in Russia. A fall in Kaffirs and Diamonds spread to Rhodesians, and affected copper shares as well. On the other hand, the Mexican mining market is cheerful, owing to good developments announced from the Esperanza property. Broken Hills are also harder once more, on the expectation that the protracted strike is on the point of settlement. The various tin-mining groups attract no public attention, and Indians are colourless. In some directions, the disinclination of the public to enter upon Stock Exchange transactions is attributed to the increased charges for transfer stamps and commission, but it may well be doubted whether business would have been any better had there been no such changes. After all, it is not surprising that the public should hesitate to enter upon either investment or speculation with the general outlook at home and abroad so obscure and unsettled; brokers and jobbers admit that no real change for the better is likely, so long as the miners' strike hangs over the country.

NEW ISSUES.

5-15 Year Treasury Bonds, repayable at par on May 1, 1935, bearing interest at a minimum rate of £5 per cent. per annum, payable half-yearly on May 1st and November 1st. Price of issue fixed by H.M. Treasury at £100 per cent., payable on application. These are still on offer. For full particulars see *Economist* of May 1, 1920, pages 899 and 915.

London Housing Bonds.—Registered bonds for £5 each or multiples thereof are obtainable for terms of 5, 10, or 15 years, at applicant's choice. Six per cent. interest and full repayment when due are guaranteed by the London County Council on the security of London's rates. Interest payable each September 30th and March 31st. The money will be applied solely for the purpose of housing schemes approved by the Government, and in particular to finance the housing schemes of the Metropolitan Borough Councils. We referred to these bonds in a leader in the *Economist* on June 12th, page 1282.

The London Paper Mills Company, Limited.—Authorised capital, £250,000, divided into ordinary shares at £1 each. This is an offer for sale of £250,000 6 per cent. (free of income-tax up to 6s in the £1) guaranteed first mortgage redeemable debentures at 98 per cent. The debentures will be secured by a deed of trust between the company, Albert E. Reed and Co., Limited, as guarantors, and the National Provincial and Union Bank of England, Limited, as trustees, con-

stituting a first specific mortgage on the company's land and buildings, fixed plant and machinery, and a floating charge on the undertaking. They will be repayable on or before April 1, 1946, by annual drawings at 102½. The London Paper Mills Company, Limited, was incorporated in the current year for the purpose of acquiring from a company of the same name the business of paper makers carried on at Dartford for over 30 years. Net assets are valued at £526,878, including the net proceeds of the present issue. Of this sum, land, buildings, plant, &c., are valued at £284,572. The guarantors of the debentures—Albert E. Reed and Co., Limited—according to a balance-sheet issued for the year ending March 31, 1920, have net assets valued at £727,848. Profits of the London Paper Mills Company, Limited, and Albert E. Reed and Co., Limited, are shown from 1916 only. The offer is a reasonable one of its class, but it is, of course, subject to the usual industrial risks.

Hartley and Moore, Limited.—Authorised capital £75,000, divided into 72,500 10 per cent. participating preference shares of £1 each and 50,000 ordinary shares of 1s each. The whole of the ordinary and 23,801 preference shares have been issued. This is an issue of 48,699 preference shares, and also £50,000 of 10 per cent. short-term debentures of £10 each at par. The participation rights attached to the preference shares entitle holders to 33 1-3 per cent. of the balance of profits available after all prior charges have been paid. The debentures will be redeemed at 3 per cent. premium by annual drawings, and the whole issue will be discharged by 1929. The company was incorporated in November, 1918, with a capital of £5,000, and it is interested in supplying cocoa, chocolate, and confectionery, &c., to shopkeepers. The value of assets is given as £48,377, and it is stated that, after the present issues are subscribed, the debentures will be covered by assets nearly three times over. Both these issues have a margin of security, and the directors appear to be men actively engaged in the business. The future of the company is difficult to determine, and the issue must be described as too speculative for the small investor.

Brighton and Hove General Gas Company, Limited.—This is an issue of £50,000 7 per cent. redeemable debenture stock, offered at par, on behalf of the company, by Messrs A. and W. Richards. It is to be redeemed at par on June 30, 1935. The net revenue of the company for 1919 was £39,734, and interest on existing debentures (including the present issue) amounts to £9,971. These are well secured debentures, but investors may not find them easily marketable.

The Elite Picture Theatres (Hastings and Bristol), Limited.—Authorised capital £125,000, divided into 62,500 10 per cent. cumulative participating preference shares and 52,250 ordinary shares, all of £1 each. This is an issue at par of 52,250 preference and 52,250 ordinary shares. After the ordinary shares have received a dividend of 15 per cent., the preference shares will rank for a further dividend of 5 per cent. The company has been formed for the purpose of:—(1) Purchasing a freehold picture theatre known as "The Royal Cinema de Luxe," Hastings; (2) purchasing and converting into a picture theatre the freehold premises known as the "Royal Concert Hall," Warrior square, St Leonards-on-Sea; and (3) purchasing a leasehold cinema in Park row, Bristol, known as "The Coliseum Picture House," Bristol. The company will obtain these three picture palaces for £81,627. This sum includes £10,000 for goodwill. Of the purchase price, £67,227 is payable in cash. The promoters—the Ideal Improvement Syndicate. Limited—apparently, in addition to the above-mentioned sums, are asking for £9,000, of which £3,000 is payable in cash, for transferring options and contracts. Independent valuations of the properties are submitted, and the directors appear to be men who understand the business. Cinemas, valued on the basis of present-day building costs, require efficient management to show the substantial profits needed for such speculative ventures.

The British Road Train Corporation, Limited.—A prospectus has been issued of a company bearing the above title, which states that the "initial capital" is to be £100,000, divided into ordinary shares of £1 each. These are offered to the public at par. The intention of the promoters is to establish "15 regular passenger services by motor coaches," which will start from Manchester, Birmingham, and London, to various places all over England. The scheme is ambitious, and we doubt if the directors sufficiently enjoy the public confidence to be able to make the company a success. Costs of promotion may, apparently, amount to £17,500—a rather heavy percentage on a capital of £100,000. In the *Economist* for July 12, 1919 (see page 49), the position of a little group of undertakings emanating from the same quarter as this company was dealt with at some length. Their chief claim on public attention was their spectacular objectives, and the small investor was advised to leave them alone. In the *Economist* for November 29, 1919 (see page 994), the prospectus of another offshoot company—the Summit Motor Engineering and Transport—was adversely criticised. It is understood that this company has now been put into voluntary liquidation. It is noteworthy that the bankers to these companies are given as the Manchester Commercial Bank, Limited. There is no trace of this concern in the "Bankers' Almanac." This prospectus again is entirely unsatisfactory, and persons investing in it must be incurable optimists.

ACTIVE SECURITIES.

The following tables show the movements of the week in the more active securities of the various markets:—

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, *3 Arundel street, Strand, London, W.C. 2.*

COMPANY MEETINGS, &c.

THE NATIONAL BANK OF SOUTH AFRICA, LIMITED.

BANK'S PROSPEROUS YEAR.
INCREASED PROFITS.
CHAIRMAN'S REVIEW OF SOUTH AFRICAN TRADE.

The ordinary general meeting of shareholders of the company was held in the Bank Building, Pretoria, on Wednesday, June 23, 1920, Mr J. Emrys Evans, C.M.G., presiding.

The secretary having read the notice convening the meeting, the minutes of the previous ordinary general meeting of June 25, 1919, having been confirmed, the directors' report and statements of accounts taken as read, and the auditors' report read,

The Chairman said: Gentlemen,—Having been called to the chair at practically the last moment, I cannot do better than read to you the remarks prepared by my colleague, Mr Crawford, whose absence, through illness, from this meeting we all very much regret.

BANK'S GOLD RESERVES.

Again I am able to place before you figures which speak eloquently of the progress made by the bank. The year has not been without difficulties, and certainly the most formidable of these has been the maintenance of our gold reserves. All through the war period we made strenuous efforts to keep the bank's gold reserves up to an adequate standard, but the Imperial Authorities could not see their way to allow us to supply ourselves with sovereigns, except to a limited extent, and the exports of the country could only be financed by depleting our reserves unduly. When the embargo on the export of gold from Britain was removed in August last, the price of this commodity immediately jumped to a premium, and has ever since fluctuated severely. At one time the premium reached almost 45 per cent., but stands lower to-day at 23 per cent. It will be understood that under such conditions it has been an expensive matter for the bank to replenish its reserves.

The Union Government is giving the matter its earnest attention, but the subject is one which bristles with difficulties, and in order to cope with the situation it has meanwhile been necessary to increase our exchange rates very materially. On the one hand, the gold mines have experienced great benefit from the higher price, but on the other hand, the producers of other commodities for export have been severely handicapped by the exchange difficulties with which the banks have been contending. The exchange and currency problem has pressed on us very severely during the last few months, and has added enormously to the difficulty of carrying on our every-day business.

THE BANK'S EXPANSION.

However, in spite of the troubles I have mentioned, your directors are able to place before you to-day a balance-sheet showing great expansion, and reflecting the prosperous condition of the country. During the war period we were not able to open many new branches, but in the course of the last eight months or so quite a large number have been established in various parts of South Africa. Since we last met, an office of the bank has been opened in Antwerp, and we have now also our own branches at Bombay, Port Louis (Mauritius), and at St. Helena.

BALANCE-SHEET ITEMS.

I would now direct your attention to the balance-sheet, and I am sure you will feel that the figures set forth are most encouraging. The paid-up capital now stands at £2,965,000, having been increased by the issue of a further 10,000 shares, as referred to in my remarks of last year. The reserve fund appears at £1,050,000, an increase of £200,000 over the figures of the previous year. Deposits stand at £61,323,000, as against £40,521,000 the preceding year. Notes in circulation amount to £4,327,000, as against £3,070,000 on March 31, 1919. The increase is due to the greater prosperity enjoyed by the country, which has necessitated the circulation of more currency. The increased cost of financing dealings in practically all commodities is another reason for the greater volume of currency now required. On the other side of the balance-sheet it will be observed that cash assets, including money at call in London, total £13,761,000. Investments stand at £12,185,000. These appear in our books at or below market quotations on March 31, 1920, and, as was the case last year, they may be described as of the gilt-edged class, comprising principally British and Colonial securities. Unfortunately there has been a heavy depreciation in all these stocks, with the result that we have had to provide no less than £100,000 in order to bring our investments down to under market quotations. I am sorry to have to add that the trend of prices seems likely to render it necessary for us to appropriate a further sum against these assets during the current year. Bills of exchange stand at £14,429,000, as compared with £9,210,000 last year. Bills discounted, loans, &c., aggregate £32,961,000 as contrasted with £24,370,000 the year before.

BANK PREMISES.

Bank premises have been again substantially written down, and stand at £768,030. This account reflects premises used by the head office and numerous branches of the bank, and the asset is one essential to our business. It is considered that the figure at which the premises stand in our books is well represented by tangible value.

Liquid assets, comprising cash, money at call in London, investments, and bills of exchange aggregate £40,375,000, and represent 58 per cent. of the bank's liabilities to the public.

PROFIT AND LOSS ACCOUNT AND DIVIDEND.

The profit and loss account reflects a profit of £515,000, as against £438,000 for the year ended March 31, 1919, after allocating £50,000 in reduction of bank premises account.

The board of directors recommend a dividend at the rate of 7 per cent., and a bonus of 1 per cent. per annum, which makes a distribution of 8 per cent. for the year. Should this recommendation be adopted, the amount distributed in dividend and bonus during the year reviewed will be £235,483. It is further recommended that an amount of £60,000 be placed to officers' pension fund, and that £200,000 be placed to reserve fund, increasing the latter to £1,250,000 when capital and reserve will then aggregate over £4,200,000. A balance of £43,200 will thus remain to be carried forward.

The board is again able to assure shareholders that ample provision for bad debts and outstandings of doubtful character has been made.

EUROPE AND SOUTH AFRICAN PROSPERITY.

At our meeting last year reference was made to the relief experienced when the Armistice was signed, and, although it is more than a year and a-half since that joyful event, the world is still in a very unsettled state. Vast areas of Europe, indeed, are in turmoil, and the final outcome is obscure. In South Africa, however, prosperity continues to reign, and probably few countries in the world have experienced so little of the terrible consequences of the war.

It is very important to us and to all producing countries that the great European nations should recover their financial status. South Africa has such a wealth of raw products to market that it cannot continue to be prosperous and to expand its trade unless countries oversea are able to buy. There are, I think, indications that Europe generally is slowly emerging from the unhappy position created by the war. As with all developing countries, we shall probably experience periods of depression, and meet with set-backs from time to time. I am confident, however, that we shall emerge from each of these, and be tided onwards to increased prosperity. The country is so rich in raw products that it cannot for long remain depressed, and to convince ourselves of this we have only to examine our past industrial history, which is a record of vicissitudes, one following the other with kaleidoscopic rapidity. Through all these changes runs, however, a line of advancement. We have, of course, been aided tremendously by our gold and diamonds, and naturally these remain to-day some of our greatest assets. We have others, which are expanding into greater importance year by year, and I will allude to these presently.

MINES.

On this annual occasion it is usual for me to dwell for a little upon the principal industries of the country, and, taking minerals first, it is natural to begin with gold mining. The production of the Union for 1919 was valued at £35,390,609, as against £35,758,316 in 1918. It is thus clear that from the point of view of production, the industry has practically held its position. The continued increase in costs is, however, a disturbing feature, and but for the premium on gold, the consequences would certainly have been serious. It is unfortunate to have to record the closing

down of some of our lower-grade mines, and to foreshadow the probable cessation of operations on the part of others. The increasing cost of working these mines has outweighed the additional revenue obtained from the gold premium.

GOLD FIELDS.

We must not, however, forget that our gold fields are now over 30 years old, and it is natural that some of the older properties should drop out of the producing rank. We must also not overlook that a number of rich mines are in process of being developed, and will in due course enter upon the producing stage. I do not argue that these are sufficiently numerous to compensate for the loss of output by reason of the closing down of the older and lower grade propositions, but nevertheless, the new producers will help before long to fill the gap. It is clear, moreover, that other industries now coming into their own will help to make up for our diminishing production of gold.

DIAMONDS, TIN, COPPER, ETC.

With regard to diamonds, we find again an astonishing increase in the value of the output. In 1918 2,537,360 carats, valued at £7,114,862, were produced, whereas in 1919 the figures were 2,588,017 carats, valued at £11,734,495.

In the case of tin there has been a falling-off in the output, only 1,628 tons, valued at £275,111, having been produced, as compared with 2,346 tons, valued at £470,238 the preceding year.

The output of copper has continued to seriously decline. In 1919 4,904 tons, to a value of £208,902, were produced, as against 6,823 tons, valued at £358,627 in 1918.

The coal output was 10,261,859 tons, valued at £3,430,361, against 10,658,644 tons, valued at £3,483,493 the year before.

It may be a little early, perhaps, to say much about our iron fields, but I am confident that the iron industry opens up immense possibilities, and I hope before very long that we shall see very large iron works established. The iron works in the Pretoria district have scarcely passed the experimental stage, but have shown that the strong hopes entertained concerning them should be fulfilled.

WOOL, MOHAIR, OSTRICH FEATHERS.

In 1919 184,740,104 lbs of wool were exported, representing a value of £17,885,713. The figures for the preceding year were 115,634,498 lbs, valued at £9,689,630.

Statistics regarding mohair show that in 1919 16,942,021 lbs were exported, the value being returned at £1,654,235. The value of the mohair exported was approximately the same as in 1918, although more than 3,000,000 lbs less were exported in 1919 than in the preceding year.

Last year it was pleasing to be able to record a distinct revival in the ostrich feather industry, and, although the figures for 1918 then quoted were not encouraging, it is very satisfactory to observe that the records for 1919 reveal a remarkable increase. Statistics show that 904,611 lbs were exported to a value of £1,646,014, as against 108,924 lbs, valued at £88,628, in 1918. We shall hope that the resuscitation of the industry is no passing phase, but it is well to remember the fickle market for this luxury, and, as I have more than once remarked in the past, farmers should not specialise in ostriches to the entire exclusion of other branches of farming.

MAIZE AND WATTLE BARK.

With regard to maize, I have no export figures to quote. The 1920 crop in the Union, according to last estimates, will be about 20 per cent. below normal, and it is calculated that the production will amount to round about 10,000,000 bags. The estimated consumption of the Union is 9,500,000 bags, but as these are merely broad estimates, it is perhaps unwise to reply upon any considerable surplus for export.

Wattle bark in 1919, to a value of £602,182, was exported, as against £287,220, representing the value of bark exported the previous year. The increase is surely a very marked one, and justifies the prediction I made last year to the effect that when shipping facilities were freer, the quality of our bark would gain for it a welcome in increasing quantities in the markets of the world. The industry of tanning extraction continues to be prosecuted with success, and is expanding in a healthy manner. I have more than once in the past made reference to the desirability of encouraging tree planting in every possible way. I do not refer in particular to wattle planting, but to afforestation generally. There can be no doubt about the tremendous benefit conferred upon the country by enterprise of this kind, which, moreover, brings within a few years a handsome reward to the people promoting it.

FRUIT.

With regard to the fruit industry, I do not know that our export trade has yet thoroughly set out on the path of progress which we hoped it would follow on relaxation of the shipping restrictions which hampered it during the war. Its future must, however, be a great one. South Africa is situate at no prohibitive distance from the great European markets, and the incidence of our seasons is all in favour of this trade. We hear most favourable accounts of the development of citrus farming in various parts of the country, and with a full measure of shipping facilities it should be possible to expand the export trade in citrus fruit enormously.

Fruit culture and the manufacture of preserves must surely be industries capable of very wide development, in view of the demand in the oversea markets for dried fruits of all descriptions, preserves, &c.

COTTON.

Cotton growing is attracting a good deal of notice, and I see that in the Rustenburg district alone a million lbs of cotton were produced.

In the Barberton district and also in Natal considerable attention is now being devoted to cotton growing, with encouraging results, and there is no doubt suitable land available for this class of farming in other parts of the Union—particularly in the Northern Transvaal.

In view of the world shortage of cotton and the prospects of profitable prices being maintained for some time to come, it seems that more and more attention will be paid to the cultivation of this crop.

It will be noted that a cotton factory was recently established in Cape Town, which, like the woollen factories which have recently sprung up, is likely to be a great success.

With regard to tobacco, it is understood that the crop has responded to favourable weather conditions, and that the estimated production is something in the neighbourhood of 819,000,000 lbs.

SUGAR.

The "sugar year" which ended on April 30th was a favourable one, a yield of 189,173 tons of marketable sugar being recorded.

It is interesting to note that the oversea value of sugar has advanced to £90 per ton, and averaged over the whole year the equivalent of 57s per 100 lbs, whereas the average price obtained by Natal producers during the same period was probably about 25s per 100 lbs. There is, I understand, some uneasiness with regard to the coming crop, owing to the unfavourable weather conditions experienced in May.

BEEF.

We have had pleasure on the last few occasions upon which we have met in welcoming the advent of a new export trade for South Africa in regard to the export of beef, and I see that during 1919 some 285,367 qrs were exported. It is understood that the quality continues to please the London market, although at times our meat suffers a little by comparison with some of that sent forward by longer established competitors. There is, however, no reason why the trade should not be steadily developed, and why cattle ranching should not become a more and more important section of the farming industry. We have vast areas of suitable land with much of which little is being done at the present time. We have markets awaiting us, and, I believe, we have the class of farmer who will, in good time, make the most of these tremendous possibilities.

INDUSTRIES.

Industrially the country continues to move forward in a very gratifying manner. The latest statistics show that the factories of the Union produce annually goods to a value of nearly £61,000,000, and it is estimated that in the last four years the output of manufactured goods in the Union has increased by roughly 50 per cent. These figures, it should perhaps be emphasised, refer only to manufactured goods, and do not take into account the output of the mines. During the last four years 2,000 additional factories have come into existence, and to-day there are nearly 6,000 factories operating, giving employment to 134,000 hands, and paying annually 12¼ million sterling in wages. The capital invested exceeds £35,000,000, and the factories consume raw and semi-manufactured material to an estimated value of £34,000,000 per annum. Over 300 different classes of manufactured goods are produced. Approximately 40 per cent. of the output of these factories is composed of manufactured articles of food and drink, and it is pleasing to know that this Union of ours is to-day practically self-supporting so far as the real necessaries of life are concerned. This healthy position has, no doubt, been induced to a great extent by the protection against overseas competition, brought about by the lack of shipping facilities during the war period, but the opportunity seems to have been seized, and many of the new industries have certainly come to stay.

EXPORTS AND IMPORTS.

The export trade in purely South African products amounted in 1919 to over £48,000,000, excluding the gold output, and this, it is interesting to see, represents an increase of 74 per cent. over similar exports during 1913. The country's total exports in 1919 were over £52,000,000, excluding raw gold.

The value of imports for the year was £52,397,000, and when to the export figures is added the value of the raw gold exported,

namely, £35,000,000, there is a notable balance in favour of the Union.

All this is most encouraging and augurs well for our future. Prior to the war imports and exports almost balanced, but during the war period exports have altogether outrun imports owing to the shortage of shipping tonnage and arrested production in the belligerent countries. Consequently credit balances have been piled up overseas. However, from the fact that our production and our export trade have so increased it may be safely argued that our imports will be stimulated. A great deal of machinery will be required by our industries, and many classes of manufactured goods which we cannot as yet produce are already badly wanted, and will assuredly be imported freely as soon as shipping permits. As the balance of trade is thus rectified we can hope for a gradual improvement in the exchange situation.

LABOUR.

To fulfil our industrial destiny we shall require increased manhood power. More population of the right type would enable us to do far more than we can expect to achieve with the limited operative forces available to-day. In common with most parts of the world, we have had our industrial disputes. All of us, perhaps, have had to alter our attitude of mind, and to bring our ideas into tune with present-day sentiments. The world's mode of thought is changing, and the mind of man is becoming more receptive of new industrial teachings. Both sides to industrial dissensions are, I think, coming to grasp the fact that the keynote should be co-operation between employer and employee, and recognition of the mutual dependence of capital and labour. With this spirit abroad, and a determination to increase production, there need be no fear for our future.

DECIMAL COINAGE.

Once again I should like to refer to a reform for the adoption of which I have for some long time been an advocate, and the merits of which I have been wont to plead on several occasions such as this. I mean the system of decimal coinage, and the metric system of weights and measures. You are aware that the Royal Commission which has been inquiring into the question recently pronounced against the adoption of decimal coinage. I am not convinced that the objections expressed in the report are vital, or that the question has been settled once for all by the commission. However, the matter must apparently be dropped for the time being.

THE STAFF.

Our thanks are due to our staff, whose exertions enable me to report such gratifying results. Reference was made in my survey last year to the Widows' and Orphans' Fund inaugurated just two years ago. This has proved a great blessing, and I am sure is thankfully appreciated by the staff.

Last year I alluded to the possible negotiation of a scheme in terms of which the bank's staff would have greater participation in our profits. Unfortunately difficulties have arisen which made it impossible to bring the scheme to fruition, but in lieu of it the board recommends, and I am sure shareholders will have pleasure to-day in voting, the payment of a bonus of 20 per cent. to the staff as indicated in a circular addressed to them on April 15th last.

Since we last met, Mr James Rankin Leisk has been appointed a director of the bank by the board, and this appointment you are asked to confirm.

Mr Edward Charles Reynolds, the general manager, has also been appointed to a seat on the board, with the title of managing director, and of this appointment your confirmation is requested.

I now beg to move the adoption of the report, balance-sheet, profit and loss statement, and the recommendations of your board.

Mr J. B. Taylor seconded the motion, which was unanimously adopted.

The appointments by the board of Mr J. R. Leisk, C.M.G., and Mr E. C. Reynolds as directors of the bank, were confirmed, and the retiring directors, the Hon. Hugh Crawford and Messrs J. B. Taylor and J. Emrys Evans, C.M.G., were re-elected.

The remuneration for the past audit was fixed at 500 guineas, and Mr Robert Baikie and Messrs Dougall, Lance and Webber were reappointed auditors for the current year.

VOTE OF THANKS TO THE STAFF.

Mr Patrick Duncan, in proposing a vote of thanks to the staff, said: I have pleasure in moving a very hearty vote of thanks to the general manager and staff for the work they have performed during the past year, the results of which we have just heard. I am sure that the shareholders already appreciate what they owe to the general manager, and I can assure them that the board are most keenly appreciative of what the bank owes to the untiring energy and ability which Mr Reynolds has displayed, and continues to display, through most trying times, in the interests of the bank, and it is a great pleasure to the board to welcome him as a colleague, an appointment which you have just confirmed.

To the staff we owe a debt of gratitude, and we know that the trying times we have just passed through have cast a very great burden on their shoulders, and we are very grateful for the zealous and efficient manner in which they have coped with the situation. Of course, the staff of this bank, like those of other banks in South Africa and probably elsewhere, are passing through very critical times. We are having experiences which I believe are unique in the history of South African banking: we are threatened with strikes, and we seem very near to seeing how far these threats are going to be carried out. We have also had another novelty in connection with South African banks—namely, the recognition accorded to the Union of Bank Officials in this country by the Association of South African Bank Managements at the conference convened by the Government recently. These things are new to South African banking, and we need not look upon them with any undue apprehension.

EMPLOYER AND EMPLOYEE.

As a means of settling differences, whether in banking or other business and commercial matters, free and frank discussion between employer and employee is undoubtedly recognised as the best medium. The world has been changing in late years in regard to what employees expect and require, and we, as employers, must not be behind the times in these matters. I myself look forward with confidence to a sense of responsibility on the side of the employees, and a sense of equity and justice on the part of the managements should see us through the disturbed times we are passing through. We should look for a sense of responsibility from banking officials, and I feel sure we shall find it.

I think this bank especially is influenced by principles of justice, and I feel confident, therefore, that the outcome of the new and unprecedented circumstances we are now in will be a peaceful and honourable settlement of the differences outstanding between the employees and the managements. At any rate, this is the spirit in which we have approached the present situation and, in conclusion, I ask the staff to accept a very hearty vote of thanks for the strenuous work they have performed during the past year.

Mr O. R. Dunell, a member of the London Committee of Management of the Bank, seconded the motion, which was carried with acclamation.

Mr W. Dunlop, assistant general manager, said:—

I return thanks for the resolution which has been passed. I very much regret that Mr Reynolds is not here to-day to respond to this vote, but I would say on behalf of the staff that we appreciate very much indeed the manner in which the shareholders evidently regard our exertions during the past year, and in particular that this appreciation has taken a very tangible form in the declaration of the bonus of 20 per cent. I feel sure I am expressing the feelings of my colleagues by tendering their thanks for and appreciation of the action of the board of directors in this matter.

VOTE OF THANKS TO THE CHAIRMAN AND DIRECTORS.

Mr A. H. Rennie then said:—I ask you to join with me in passing a vote of thanks to the chairman and directors of the bank. I feel sure you have all listened with great pleasure to the chairman's speech. It discloses wonderful figures and wonderful progress, and that being the case it needs very few words from me to give due credit to the directors. One thing we have to be thankful for is that we are not threatened with a strike of directors! The directors of this bank are gentlemen of very high standing and ability, and we all know the difficulties they have met with during the past year. The world is still up-side-down, and trade and business of all descriptions is experiencing new problems coming forward from day to day. Under the circumstances the directors have great weight thrown on their shoulders, as directing the affairs of a bank of this magnitude requires a clear brain, a steady hand, and great forethought, not to say prudence. I feel certain, gentlemen, that we all appreciate what they have done, and we have thorough confidence regarding the future.

The Chairman has mentioned the wonderful development of this bank and of this land, but I venture to state that years to come will show that he has much under-estimated the future that lies before us. I have travelled a good deal, but in my opinion there is no country in existence to-day that has got as bright a future as that which lies before this if we make proper use of our opportunities. Our coal exports can be extended tremendously, and our other commodities—sugar, wattle bark, mealies, &c., will all find a ready market. In the old days South African products used to be neglected, but that is not so to-day. The world has got its eyes on us now, and it depends on us what we do.

The future brings on the board of directors responsibilities with which I feel sure they will cope, and I now ask you to join with me in passing a very hearty vote of thanks to the chairman and directors.

Mr H. L. Malherbe seconded, and the motion was cordially agreed to.

THE CHAIRMAN'S REPLY.

The Chairman in response said:—

I beg to thank you for your remarks. I should like to say how

sorry I am that our chairman, Mr Crawford, is not here to-day, and I feel sure you will all join with me in the hope that he will very soon be restored to health. I understand he is making progress, and I hope in a day or two he will be in his normal condition. Gentlemen, I thank you for your attendance at the meeting this afternoon.

This concluded the proceedings.

SOUTH METROPOLITAN GAS COMPANY.

IN VIEW OF THE RECENT ACT OBTAINED BY THE COMPANY REQUIRING ITS GENERAL MEETINGS TO BE HELD ANNUALLY, THE MEETING ANNOUNCED FOR THE 11TH AUGUST DID NOT TAKE PLACE, AND, IN THESE CIRCUMSTANCES, THE FOLLOWING LETTER HAS BEEN ADDRESSED TO THE SHAREHOLDERS.

IMPORTANT NOTICE TO SHAREHOLDERS.

DEAR MADAM OR SIR,

I desire to take the opportunity afforded by the transmission of the enclosed dividend warrant to ask your special attention to the following observations.

The dividend is at the same rate as that declared during the preceding six months, and is the maximum allowable under the provisions of the Government Act passed two sessions ago, which was intended to afford relief from the intolerable conditions imposed by previous sliding-scale legislation.

Shareholders in this company will need no reminder of the inadequacy of that relief, having—between them—suffered loss in dividend of over half a million sterling since the outbreak of war, irrespective of the heavy taxation levied on the remainder.

It is not surprising that such conditions have rendered unpopular the investment of capital in gas supply in spite of the encouraging outlook for the future of the industry.

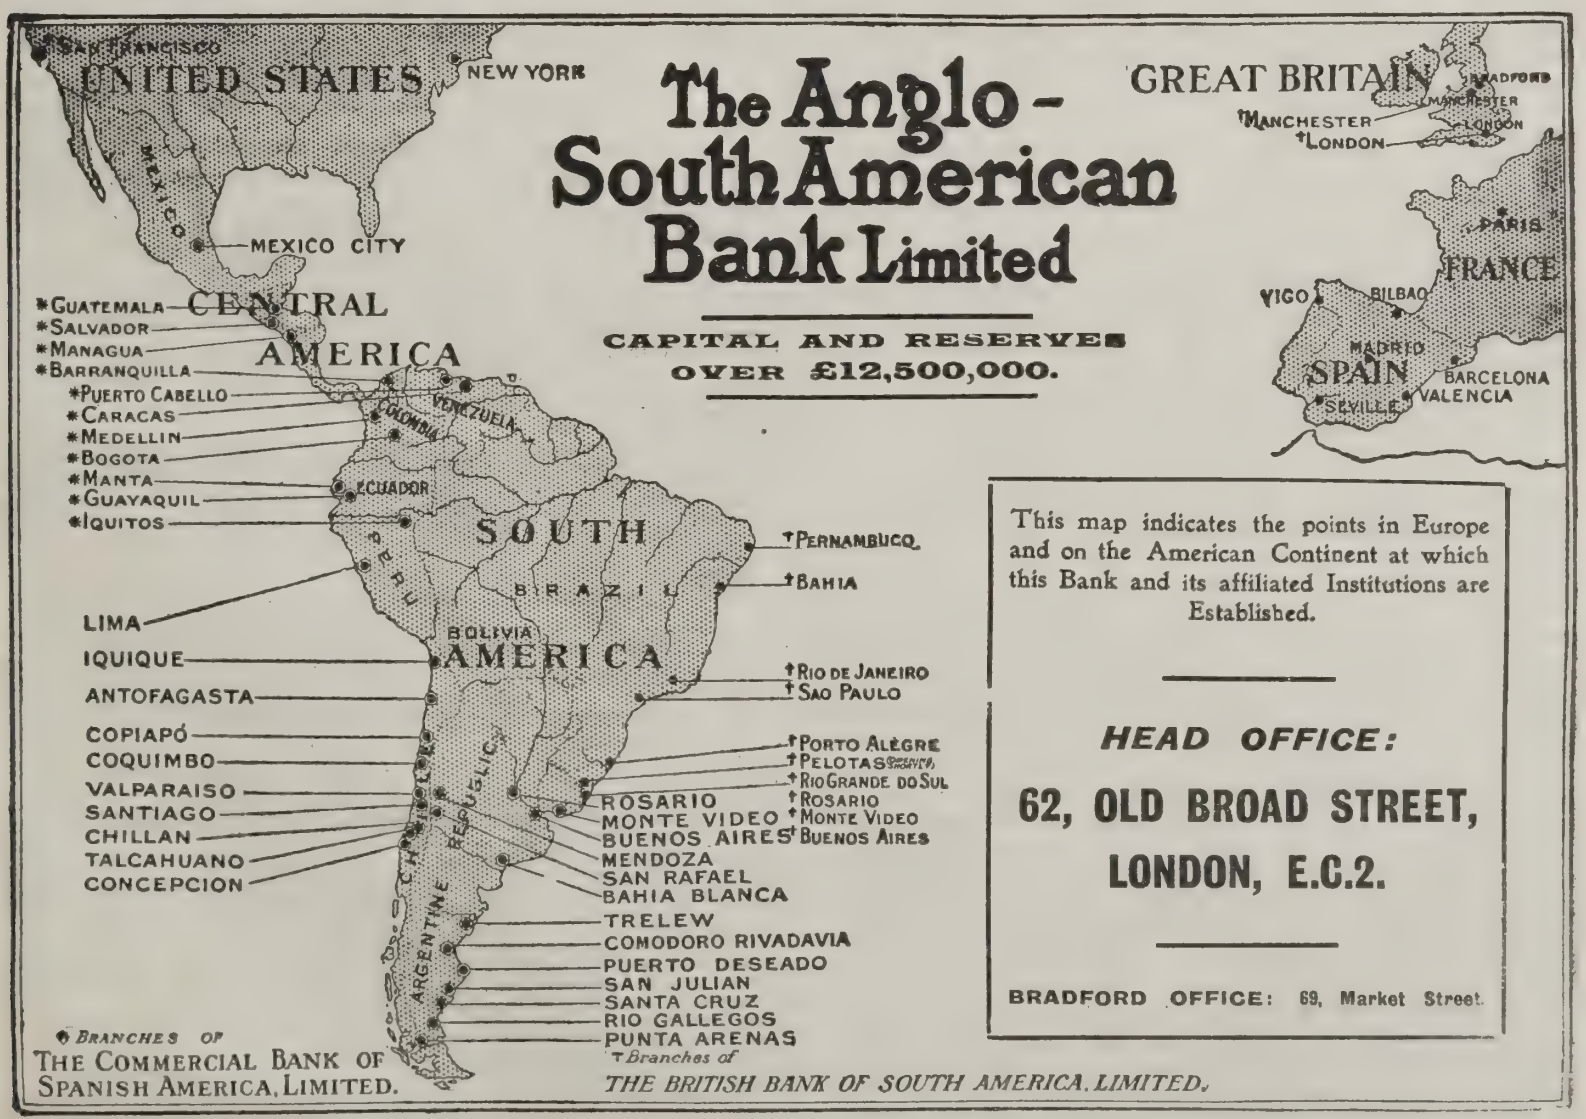
With the object of getting this grave injustice remedied the directors promoted a Bill in the recent Session of Parliament, and were fortunate in obtaining the highest financial and scientific assistance in the country in support of its provisions.

In this connection the board desires to acknowledge its great indebtedness to (among others) Sir William Plender, Sir Harry Goschen, Sir Herbert Hambling, Sir William Pope, Professor Henry Louis, Dr E. F. Armstrong, Mr J. G. Buchanan, Mr Andrew Young, Mr Frederick I. Pitman, Mr Doig Gibb, its leading counsel Mr Vesey Knox, and last but not least its indefatigable Parliamentary agent, Mr T. Seager Berry, for the invaluable assistance and support these gentlemen so unreservedly placed at its disposal.

The principles for which they contended were completely vindicated before, and accepted by, Committees of both Houses of Parliament.

The unjust sliding scale has now disappeared for good from the company's charter, its place being taken by provisions framed more in accord with present-day conditions. In substitution for an antiquated piece of legislative machinery (the need for which ceased long ago) which has wrought great and cruel injustice upon gas shareholders during the war, Parliament has now adopted the basis that capital invested in gas supply is as much entitled to a fair return for its use as is labour for its service therein.

It has fixed that return at 5 per cent. per annum in respect of the issued, and at 6 per cent. per annum in respect of the unissued ordinary stock of the company, which rates, *under all circumstances,* the shareholders will henceforth be entitled to divide. Profits earned beyond this will be divisible in the proportion of three-fourths to the gas consumers by way of reduction of price, and one-fourth in equal parts to the shareholders and co-partner employees. Both capital and labour will thus be encouraged to progressive effort, the one by extending business in all directions, the other by economical working and production. As a result it is confidently hoped that these bonus additions to, on the one hand the standard rate of interest on capital, and on the other to standard rates of pay for labour, will become quite substantial.



The valuation of gas according to its illuminating power—towards the supersession of which the company, at a sacrifice of present advantage, took the first step in 1900—is now abolished, and its place filled by a rational system of selling gas according to its heating value, which will enable the company in future to produce gaseous energy less wastefully and with more regularity of quality.

In this great change the company has played a not unimportant part.

Its present-day consumers of self-luminous gas will not be prejudiced thereby, as there is no intention of sacrificing their necessities to the luxury production of motor spirit.

Parliament has also again confirmed its earlier recognition of the need to encourage in every way the supply of gas having the highest degree of purity, and in future the attainment of this ideal in the interests of gas consumers will be dealt with as a legitimate aspiration and justly entitled to reward. By the adoption of processes for its complete purification, any foundation for the remaining prejudice expressed by some to the use of gas for all domestic purposes will thus disappear.

With the foregoing adjustments of the conditions under which

This map indicates the points in Europe and on the American Continent at which this Bank and its affiliated Institutions are Established.

†*Branches of* THE BRITISH BANK OF SOUTH AMERICA, LIMITED.

the company carries on its business, the directors feel a heavy burden of anxiety has been removed from the shareholders, and they desire with complete confidence to draw their attention to an important particular in which they will have an opportunity before long of doing their part in building up the future organisation of the company upon the new foundation which has been provided.

Owing not only to the extension of business, but largely to the need for more floating or working capital entailed by the higher costs of materials and labour, it will be necessary to make, at the first favourable opportunity, a substantial issue of capital, and thus replace the temporary loans at present obtained through banking sources.

This necessity, experienced by all industrial undertakings, is one the directors feel they can with no uncertainty appeal to existing shareholders to meet, and thus to do their part towards the post-war re-establishment of the undertaking in providing a substantial portion, if not the whole, of the new moneys required.

I am,

Dear Madam or Sir,

Your obedient servant,

CHARLES CARPENTER,
Chairman.

September 2, 1920.

FARROW'S BANK, LIMITED.

ANNUAL MEETING.

IMPORTANT DEVELOPMENTS.

The annual general meeting of Farrow's Bank, Limited, was held at Anderton's Hotel, Fleet street, London, E.C., on Tuesday, the 31st ult., under the presidency of the chairman and managing director, Mr Thomas Farrow. The bank's 5,000 shareholders were represented by a record attendance, due to the interesting and important proposals which it was known Mr Farrow would place before the meeting.

In the course of his speech, the Chairman observed that the growth of the institution from its inception as a joint stock bank was well illustrated by the following comparative table :—

Current Account.		1908. Deposit Account.		Assets.
£		£		£
87,626	.....	78,679	.....	226,286
		1920.		
1,458,316	.....	2,678,000	.....	4,657,786

During the year the total figures had increased by £670,000, despite the fact that there had been issues of Government loans, persistent appeals for public money for housing bonds, and the abnormal demands for funds for the re-establishment and development of industrial enterprises throughout the country.

The bank had continued to maintain its steady progress and strengthened its resources generally, notwithstanding the economic depression caused by industrial unrest, unusual depreciation of securities, and heavy additional expenditure. The directors recommend a dividend of 6½ per cent., being ½ per cent. more than that paid for the previous year.

Branches had been opened, extended, or improved in various parts of the United Kingdom, districts had been selected for new branches, and an immense and ever-increasing volume of business had been transacted by the bank's numerous departments, in particular the stock and share and foreign exchange branch at Angel court, Throgmorton street, E.C.

INCREASED CAPITAL GUARANTEED.

In the opinion of the directors, the time had arrived when the present capital of the company, of £1,000,000, should be increased to make it commensurate with the bank's capacity for public service. Mr Farrow proceeded to outline his proposals for the achievement of this end, including the adoption of new articles of association and the provision of the whole of the further capital required without making any issue to the public.

So far as the new articles of association were concerned, they would be submitted to the extraordinary general meeting to follow, while as to the increased capital, Mr Farrow announced that certain gentlemen had undertaken to subscribe at par for the remaining 300,000 shares and the 2,000,000 shares of 10s each to be created, subject only to the recognised rights of existing shareholders to make whatever application they chose for these additional shares. By the adoption of this plan the share capital of the bank would stand at £2,000,000; an extended field of operation would be opened up, and the bank would secure the active co-operation of well-known business men.

After dealing exhaustively with questions affecting the bank's general administration, including the staff superannuation scheme, the new benevolent fund, and increased salaries, the Chairman concluded by moving the adoption of the report and balance-sheet.

The resolution was seconded by Mr W. Walter Crotch in a review of the international banking situation and the possibilities available for Farrow's Bank in that direction, and carried unanimously. The retiring directors and auditors were re-elected.

EXTRAORDINARY GENERAL MEETING.

At the extraordinary general meeting the proposed new articles of association were, after an interesting discussion, unanimously adopted, and the directors warmly congratulated on the scheme.

† Rates lowered ½% on Jan. 2, 1918, and lowered ½% on Feb. 14, 1918, but raised ½% on Oct. 6, 1919, and ¼% on Nov. 6, 1919, and 1% to 5% on April 15, 1920. ‖ Lowered from 3½% to 3% on June 5, 1918, but was raised to 3½% on July 31, 1919, to 3¾% on Oct. 6, 1919, to 4¼% on Nov. 6, 1919, and 5¼% on April 15, 1920. *Changed from 4¾% to 4% on Dec. 27, 1917, and from 4% to 3½% on Feb. 14, 1918, at which rate they remained until they were suspended on May 31, 1919. Daily sales resumed on July 14, 1919, when two months' bills were also introduced. The daily sales of two months' bills were stopped on August 15, 1919. Rates commenced on July 14, 1919, as follows:—Two months, 3⅜% (July 14 to August 15, 1919, period of daily sales); three months, 3½%; six months, 4%. On October, 6, 1919, the three months' Treasury bill rate was raised 1% to 4½%, and six months 1% to 5%. On November 7, 1919, the three months' rate was raised from 4½% to 5½%, and the six months' rate from 5% to 5½%. On March 19, 1920, daily sales of six months' Treasury bills at 5½% were replaced by twelve months' Treasury bills at 5½%. On April 14, 1920, three and twelve months' Treasury bill rates were raised from 5½% to 6½%. Sales of twelve months' Treasury bills were suspended on April 29, 1920.

British South Africa	837,077	France	1,320
		Switzerland	83,500
		Italy	1,780
		Gold Coast	1,718
		United States	825,500
Total value of imports of gold	885,787	Total declared value of exports registered in the week	914,038

Messrs Samuel Montagu and Co. write on September 2nd as follows :—Gold : The Bank of England gold reserve against its note issue is £121,552,420—an increase of £19,590, as compared with last week's return. A fair amount of gold came into the market and was taken for the United States of America, with the exception of a small quantity acquired for India. Silver : The silver market occasionally has moments when the future movements of the price are a matter very difficult to conjecture. Speaking broadly, the reason is that the position of affairs is largely artificial. Government regulations in different countries (as to trade, as well as currency) interfere with the law of supply and demand to such an extent that ordinary methods of judging the course of silver prices cannot be relied upon. We are passing through one of these periods. Under apparently strong pressure last week the price in the United States moved well over the dollar point. Supplies in London seemed likely to dry up outside of those that came from America, and the price made a hasty leap to 63¾d. Since then a considerable reaction has ensued. The fall of about 10 points in the American exchange evidently cannot be looked upon as indicating confidence in a much higher level, as some might have been assumed from the sharp advance beyond the Pittman dollar limit. A further perplexing element has been sales on account of the Indian bazaars to this market. Whether these are owing to a distrust of the general outlook of silver, to less assured prospects of the monsoon, or to an anticipation that the rupee exchange may decline from other causes, it is impossible to say. It is significant, however, that the onus of support for the silver market lies upon China alone, now that the Continent is more seller than buyer, and that India—the great Eastern absorber of the metal—has, temporarily at any rate, become a seller. There seems uncertainty as to the actual amount of silver Mexico is likely to export. If the quantity retained for coinage be really considerable, there would be little risk of any important setback in the world price so long as the U.S.A. is a buyer at a dollar the ounce. The London quotation, however, will be influenced by the course of the American exchange, another factor of great complexity. We understand that the Chinese exchange at the present time does not correspond with the condition of trade—it is still guided by speculative influences. A reaction has taken place to-day mainly on account of absence of business. The stock in Shanghai on the 28th ulto. consisted of about 35,400,000 ounces in sycee, 22,000,000 dollars, and 270 bars of silver, as compared with about 33,450,000 ounces in sycee, 21,000,000 dollars, and 2,170 bars of silver on the 21st ulto. The Shanghai exchange is quoted at 5s 9d the tael. Statistics for the month of August are appended :—

NOTICES.

The National City Bank of New York announces the opening of a branch at 11 Waterloo place, London, S.W.1.

The National Bank of New Zealand, Limited, announce that branches have been opened at Dannevirke, Masterton Te Aroha, and Whangarei, also an agency at Ruawai (sub Paparoa branch).

Mr H. T. Hanson has commenced business as a discount broker at 3 Salters' Hall court, E.C. 4, having been associated for the past 30 years with the firm of Messrs Smith St Aubyn and Co. The style of the firm will be H. T. Hanson and Co., and Mr Perceval Lowndes Frith, Associate Chartered Accountant, is authorised to sign per procuration.

The Standard Bank of South Africa, Limited, announce the opening of branches at Taungs Station, in the Cape Province, on August 25th, and at Lindi, Tanganyika Territory, on August 26th, also the opening of an agency at Mulders Vlei, near Stellenbosch, in the Cape Province.

The directors of the London County Westminster and Parr's Bank, Limited, have appointed as assistant general managers of the bank, Messrs P. H. Mortimer, F. E. Steele, and W. J. Woolrick. Mr E. L. Price and Mr J. Harriss have been appointed superintendents of branches.

At a meeting of the Executive Committee of the board of directors of the Guaranty Trust Company, of New York, Mr Richard P. Staigg was appointed assistant manager of the London office of the company, 32 Lombard street, E.C. Mr Staigg has been, until recently, assistant manager of the Brussels office of the company. He will take up his duties in London in the near future.

The directors of the Commercial Bank of Spanish America, Limited, have issued a further 238 583 £1 fully-paid "A" shares, making the total paid-up capital £500,000. The new shares have been subscribed at par by the Anglo-South American Bank, Limited, which holds all but about 4 per cent. of the capital.

The National Bank of South Africa, Limited, have received a cable from their head office, Pretoria, intimating that a branch of the bank has been opened at Lindi, Tanganyika Territory.

BROKEN HILL PROPRIETARY.—Cable: "Report for four weeks ended August 18th—Coke ovens—Produced 20,900 tons of coke. No. 1 blast furnace—Produced 10,956 tons of pig-iron. No. 2 blast furnace—Produced 11,330 tons. Production considerably curtailed owing to shortage of iron ore. Open hearth—Produced 21,018 tons. Blooming mill—Produced 19,168 tons. Rail mill—Produced 7,564 tons. 18-in mill—Produced 6,762 tons. 12-in mill—Produced 2,469 tons. 8-in mill—Produced 961 tons. Rod mill—Produced 4,681 tons. Broken Hill—Position unchanged."

MOUNT MORGAN.—Cable: "For four weeks ended August 22nd, treated 9,248 tons Mount Morgan ore, 674 tons Many Peaks ore, 4,791 tons concentrates and 3 tons of purchased ore and secondary products; produced 550 tons blister copper, containing 542 tons copper and 8,112 ozs gold, including 10 tons copper and 5 ozs gold from Many Peaks; also 1 ton of copper from purchased ore and secondary products. Concentrator treated 16,285 tons ore, for a production of 5,785 tons of concentrates, containing 306 tons copper and 4,324 ozs gold. In addition have matte on hand containing 19 tons copper and 237 ozs gold."

PLANET-ARCTURUS.—Cable:—"Trial run June-July 20 stamps ran 26 days; one Chilean, 17 days. Crushed 3,641 tons; yield from mill, 581 ozs fine, cyanide 354 ozs fine. Estimated value, £3,973. In addition, 230 tons of concentrates were recovered. Estimated value, £1,906."—(Office note.—If the gold in the output is taken at £5 10s, the value, exclusive of concentrates, is £5,142.)

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

The improvement in weather conditions has generally been maintained, and which facilitated harvesting operations, so that the wheat crop is being rapidly secured, and, given favourable weather during the next few weeks, it is quite possible that final returns will show an average yield. Samples marketed show variable condition, quality having deteriorated, owing to soaking rains during July and the early part of last month; but the limited supply on offer was steadily absorbed at 90s to 96s per qr 504 lbs, delivered. Imported descriptions generally quiet and more freely obtainable, while mostly consisting of North American grades, official prices being unaltered. Crop reports continue favourable from the United States, Canada, and Australia, but further rains are needed in India and Argentina. Shipments from North America continue satisfactory, but Plate clearances are on a small scale. The position of flour so far remains unaltered, the demand for G.R. grade being quiet at 63s 6d per sack, ex mill, with limited allocations of imported at 64s to 65s 9d, ex store, per 280 lbs. The maize market has been firmer, owing to higher c.i.f. offers, but business shows no appreciable expansion. La Plata new, ex ship, quoted 71s 6d,

PARTNERSHIPS.

What provision does your Partnership Deed contain as to payment out of capital to a retiring Partner? It would pay you to send a card for particulars of the special life schemes to meet such cases as drawn up by the Western Australian Insurance Co., Ltd. General Manager, G. M. Wyatt, 45-47, Cornhill, London, E.C.3.

Assets exceeding **£750,000.**

ditto old 66s 6d., landed 68s 6d per 480 lbs. On c.i.f. terms cargoes were held for 1s to 1s 6d per qr advance, despite freer offers, the tone being influenced by rising freights and moderate Argentine shipments, though same has been augmented by consignments from the Danube while offers from this direction are steadily increasing. Steamers of Plate shipping shipped sold 66s 6d, now held for 68s 6d; ditto early September loading changed hands at 67s 9d to 68s, September-October 66s 9d, Galatz-Foxanian-Bessarabian, October 15th, 70s. Composite cargoes, comprising Plate maize old crop, loading, 67s; Plate oats, 42 lbs, 51s. Cargo Danubian-Galatz-Foxanian-Bessarabian maize, first half September loading, 69s, ditto September-October 68s 3d, and Danubian-Bessarabian-Kustendji barley at 68s. Parcels firmer, but only moderate sales occurred in Plate, loading, at 67s to 69s, August-September 64s 9d, 65s 6d and 66s, September-October 63s 6d, 64s 6d and 65s per 480 lbs. Barley steady on the spot, and new English commands up to 96s per 448 lbs. Imported in light supply, and Canada Western quoted at 73s 6d ex ship, 75s 6d landed, per 400 lbs. Favourable crop prospects are reported from the United States, Canada, and Continental growers, but estimates of the Pacific North-West are reduced by two million bushels. The movement from the Danube continues to improve, and fairly liberal quantities are now coming forward from South-East Europe. Only a small business was concluded on c.i.f. terms, but prices were slightly firmer. Apart from the part cargoes of European previously mentioned parcels of Danubian-Bessarabian-Kustendji, September-October, were sold to Hull at 68s, and Manchester 69s. Oats firmly held, but trade generally quiet, with supplies in manageable compass. English white (new) quoted, 62s to 64s; old 65s to 70s per 336 lbs. Scottish, 72s to 74s. Plate, ex ship, 48s 9d; ditto, landed, 51s 6d per 320 lbs. In the forward market a fair trade resulted at dearer prices. Plate, f.a.q., afloat, sold, 47s 9d to 48s; August-September, 47s 3d to 48s; September-October, 47s 3d to 48s 6d; ditto, 42 lbs, August-September, 48s 9d to 51s per 320 lbs. Beans quiet. English quoted 90s to 105s per 532 lbs. Peas steady. English blues, 100s to 105s; Maples, 110s to 125s per 504 lbs. Oatmeal firmly held. Grain freights generally steady, while firmer rates were paid from the River Plate. A steamer Rosario to U.K.-Continent, end September, cancelling, obtained 95s, with option Genoa at 105s maize, while 100s is now asked for September 20th-October 15th to U.K., with 87s 6d established for October 1st-31st home, and 82s 6d, September-October, direct to Antwerp. North American markets steady, but chartering on a moderate scale with no material alteration in rates. India ruled firmer, with a better inquiry. Bombay, on dead weights, was fixed at 72s 6d one, 75s two ports U.K., and 115s paid for wheat and/or beans from Dalny home. Australia fixed at a vessel at the reduced rate of 120s to U.K.-Continent. Several charters were reported from the Danube to U.K.-Continent at 57s 6d, September-October, with Mediterranean options. Time charter business inactive.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1919-20, contrasted with 1918-19, 1917-18, and 1916-17.—(Particulars of imports of wheat and flour temporarily discontinued):—

THE IRON AND COAL TRADES.

Our Glasgow correspondent writes:—A good demand has ruled this week for Scotch pig-iron for export, and under the new regulations in force as to shipments, makers, who can now dispose in this relation of 20 per cent. instead of 10 per cent. of output, have been enabled to fairly meet requirements. But the inquiries from the Far East and from South American markets for No. 1 are such that it would require greatly increased available supplies to cover the wants of buyers effectually. It is also reported that there is an expansion felt in the home demand for Nos. 1 and 3 Scotch, the explanation being that consumers who have been playing the waiting game for a favourable change in prices have run themselves rather short of stocks and are now replenishing. Hematites are active, though the quantities of scrap coming forward are unusually heavy at quite ten guineas a ton. Advices as to shipbuilding construction on the Clyde show that a big volume of work is going through on old contracts, but there are not many (there are a few) new orders being placed. Steel works are very busily engaged running off plates and large sections, and are yet unable to cope successfully with the needs of consumers, mainly bridge builders, general engineers, boiler makers, and machinery builders. For black sheets inquiry remains surprisingly pressing, and the tonnage produced, the greatest ever known, is insufficient to meet buyers' claims. Tube makers are fully engaged; pipe founders are finding export inquiry improving, notably from Australia, and for nuts, bolts, and nails the outlets beat all past experience. There are not many departments which could not be doing with a larger supply of finished and semi-manufactured materials. The position in the coal trade gives cause for anxiety, and it will be an immense relief to industry if the present controversies have a happy, definite, and speedy ending.

Our Middlesbro' correspondent's report, dated September 2nd, is as follows:—Pig-iron: The demand for pig-iron is rather easier. The threatened coal strike is holding up buyers, who prefer to await developments before doing anything. Prices are now as follows:—Cleveland No. 3 and No. 4 G.M.B. foundry, 225s per ton; mixed numbers East Coast hematite, 260s per ton for home consumption, with 5s per ton more for export to Allied countries. Manufactured iron and steel: There is not quite so keen a demand, but rolling mills continue very busy. Steel ship plates (home), £23 10s; steel ship angles, £23; iron ship angles, £30 15s; iron bars, £30; steel rails, £25 net. Iron ore: Business very quiet. Works have good supplies, and there is no pressure to sell.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The advance in wool values at the London auctions has had the effect of stiffening this market, and quotations for merino and fine crossbred tops have been raised all round. Although the improvement in the demand for wool has imparted a much firmer tone to this market, it cannot be said that there is any material expansion in the amount of new business being done. Most topmakers are prepared to make concessions when they have definite offers, and while good average 64's may be quoted at anything between 8s 6d and 9s, cheaper lots are occasionally to be found. There is still a wide discrepancy between the price of tops and the cost of tops made out of wool purchased in London this week, and if wool values are maintained it seems inevitable that fine tops will have to appreciate to be brought into line. Some spinners report a moderate amount of new business, but yarn quotations remain very irregular, and prices depend almost entirely upon the position of sellers; 2-48's yarn out of 64's tops may be quoted at about 13s. The export markets continue very quiet, and English spinners are finding increasing competition from yarns spun in Belgium and France. The piece trade remains dull, and although manufacturers are still fairly well engaged on old contracts the outlook in this section is anything but satisfactory.

THE BANK OF TAIWAN, LIMITED.

Incorporated by the Special Charter of the Imperial Japanese Government, 1899.

Capital Subscribed	Y60,000,000
Capital Paid Up	Y45,000,000

Head Office - - TAIPEH, FORMOSA.
London Office - - 58 OLD BROAD ST., E.C.2

Branches: Amoy, Batavia, Bangkok, Bombay, Canton, Foochow, Hankow, Hongkong, Kiukiang, Keelung, Kobe, Moji, New York, Osaka, Semarang, Shanghai, Singapore, Soerabaya, Swatow, Tainan, Tokyo, Yokohama, &c., &c., and Correspondents in every principal town in the World.

The Bank is incorporated by Special Charter of the Imperial Japanese Government, and is authorised to issue its own notes in Formosa, conducts general Banking Exchange Business, undertakes Trust Business, and acts as Business Agents for other Banks. Special facilities are available for Exchange Business on Japan, China, India, Straits Settlements, Dutch East Indies and France, where the Bank has special working arrangements with Cox & Co. (France) Ltd. Deposits are received for fixed periods on terms which may be ascertained on application.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

All accounts agree that Australia at the moment is enjoying a wonderful season, the spring opening with the outlook of the best. Several cables received recently stated that both pastoral and agricultural prospects could hardly be better, and as the last four months have been on the whole good, there should be a good lambing. This is very desirable for more reasons than one. Sheep stocks throughout the world show shrinkages almost everywhere, and unless countries whose chief export is wool put their house in order and augment sheep stocks it will be a bad look-out for the textile world. Notwithstanding very big stocks of raw material in sight, sheep everywhere are fetching very big figures, and the pastoral industry even in South America can be conducted to-day without a loss. One very much regrets the price of coarse cross-bred wool having fallen so seriously, until it almost seems as if it is hardly worth growing, but when one considers the high price of the carcase, pastoralists can afford to overlook to-day's low values for wool, the last few years of high prices more than compensating for to-day's poor values. There is specially a need for Australian pastoralists to inaugurate a forward programme. Better stud sheep cannot be found the world over; in fact, there are quite a number of high-class studs which were never so good in the world's history, and, given good seasons, there is hope that the losses of the recent drought will soon be made up.

The current series of sales come to a finish this week, and the record is the best seen since April. The rot seems to have been partially stopped, the steady and encouraging demand for merinos during the series being very good. A fortnight's sale at a time is just about as much as the trade can comfortably get through, although it would be better if a bigger weight of wool could be distributed. Still it is useless attempting too much until trade revives, for there is an undoubted slump both in woollens and worsteds at the piece end. The series are finishing with values just about where they were at the opening, the steady call for wool at opening rates showing a very healthy situation. Still, some say they would have liked things better if the move had come from the piece end, though it has often been the case that the first move towards improvement has arisen in the raw material. There is no doubt that many firms have been covering recent sales, while the excellent character of the offerings has also tended sensibly to increase competition. Even in a slack time good wools always sell the best, and the way the raw material has gone has certainly had a beneficial effect upon the trade in general, everybody hoping that the development of more confidence in the future will lead to an increase of business all round. Next month the sales open in Australia, and the effect they will have upon both auctions and prices in this country will be watched with considerable interest.

MANCHESTER, September 2.

Business in the market has been disorganised by the weakness and wide fluctuations in raw cotton prices, and confidence in current rates is absent for the time being. Inquiry in piece goods has been of considerable extent, and dealers in India seem anxious to secure larger supplies. A few more sales have been put through in light bleaching descriptions for Calcutta, Bombay, and Madras. Operations for China have been very restricted. Rather more business has been about for Egypt in standard makes and printing styles. Most home trade buyers have looked on. The labour situation throughout the country continues to cause anxiety. Prices in American yarns have favoured buyers and the tone has been very irregular, buying being of retail dimensions. There has been no activity in Egyptian counts, and spinners of yarn as a whole tend to lose ground.

OILSEEDS AND VEGETABLE OILS.

(FROM OUR CORRESPONDENT.)

In the absence of any considerable demand linseed oil has eased off about £2 per ton on the week, and is now to be bought £3 10s below the highest recorded a fortnight ago. Trade is very disappointing, and the hopes entertained of a revival of the Continental demand as yet show no sign of materialising, though the low price at which linseed oil is now quoted ought to stimulate

"SWAN" FOUNTPENS

Express your individuality when writing your letters. The "Swan" Pen lends itself to the writer and is always responsive to his or her moods. Its smooth gold nib glides over the paper without effort, and it will express your thoughts almost unconsciously.

MABIE, TODD & Co., Ltd., Swan House, 133-135, Oxford Street. London, W.1. Branches: 79 & 80, High Holborn, W.C.1; 97, Cheapside, E.C.2; 95a, Regent Street, W.1, and at 3, Exchange Street, Manchester. Paris, Brussels, Zurich, Sydney, Toronto and Cape Town.

business. Cotton oils are nominally unchanged, very little being available for September delivery. The demand, however, is not so keen, and buyers forward insisting on lower quotations than those now ruling. Soya bean oil is offered sparingly, the English product now having to meet the competition of Oriental imported oil at lower figures made possible by reduced freightage from the Far East. Rape oil continues a moderate trade, and some business is reported in palm kernel and ground-nut oils, though only on a modest scale.

The oilseed market is on the quiet side. The nature of the oil demand does not require crushers to buy linseed forward, while shippers' prices are still much above consumers' ideas. Nevertheless, there does not appear to be much pressure to sell, and values are about unchanged. Egyptian cottonseed is easier and £1 per ton lower, while £14 is reported paid for Bombay for shipment.

Supplies afloat are not great, those of linseed being 22,800 tons to the United Kingdom and 19,900 tons to the Continent; cottonseed, 4,200 tons to the United Kingdom; and rapeseed 14,200 tons to the United Kingdom and Continent. From January 1st to August 30th the shipments of linseed from India were: To the United Kingdom, 76,350 tons; to the Continent, 21,750 tons; from Argentina to the United Kingdom, 128,400 tons; to the Continent, 122,000 tons—in all, to the United Kingdom, 204,750 tons; to the Continent, 143,750 tons. The aggregate is 175,200 tons less than a year ago. The total shipments of linseed from Argentina in the same period were 683,400 tons, including 435,000 tons sent to the United States. The shipments of rapeseed from India to the United Kingdom and Continent are 124,450 tons, and of cottonseed from Egypt and India to ditto 210,130 tons.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The hide market was again slightly weaker at Thursday's Bermondsey auctions; best ox and heifer made 13⅞-14d, showing a slight drop of ¼d-⅞d in two classes. Cows were firmer, both grades selling at 11⅜d, and thus showing an advance of ½d per lb over last week's prices. Calf were down ⅝d on heavies, and 1½d down on the light selections. Lambs were firmer, and advanced 2d each, best making 13s 8d each. Pelts also shared in the appreciation, best making 9s each and showing an advance of 1d-4d each.

There is a better business in foreign hides, the inquiry from the Continent having helped matters. The home trade, however, is still quiet. Smithfield frigorific ox are reported to have changed hands on a basis of 15d c.i.f., and 30,000 fregorifics have also been sold to the U.S.A. at $53½ to $54. Indian kips are wanted by Germany, and large sales are reported to have been made during the past week, following the removal of the export embargo. The American market is still cabled as depressed, with best heavy packers making 27 to 28 cents.

The feature of the leather trade this week has been the demand for low-grade sole leather; this is not a good sign, as it shows makers of footwear are again meeting competition by putting an inferior boot on the market, instead of lowering prices in accordance with the drop in sole and upper leathers. Prices of the better grades are firmer, and slight advances are reported. In rough dressing leather there is little to report, London and Walsall curriers not being interested in view of the slack state of their business.

In upper stock the demand has been for low-grade box sides and semi-chrome kips. Glazed kid is a falling market, and big cuts in price are frequent in view of the quantity of imported stock now arriving.

Shoe manufacturers are badly off for orders, and a good deal of short time is being worked. Fancy leather goods are also selling very slowly, and the demand for travelling requisites also reflects the dull state of trade.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, September 3.

The markets throughout the week proved rather featureless, a quiet demand being in force while measured by wants of immediate necessity, while with respect to forward positions only slight support was again accorded. Financial considerations and labour unrest all tend against improved trading conditions at the moment.

SUGAR.—All free manufacturing parcels were again difficult to sell, and the general situation proved more or less nominal. Crystallised West India, quoted, 110s to 112s; white Mauritius, 130s; and Java, 133s. American granulated, 138s. American syrup quite neglected. Good mid grocery, quoted, 45s. Honey quietly steady.

COFFEE.—Market quiet, and moderate quantities brought forward in auction only partially sold at about late rates. Export descriptions remain dull of sale. Costa Rica, ordinary to fair bold, sold, 128s to 135s 6d. The terminal market proved dull and weaker. December delivery, sold, 68s 6d.

COCOA.—This market shows no improvement, and in auction of 29,175 bags offered, only about 700 bags found buyers. West India ruled from 1s to 5s per cwt under recent private rates. Good red Trinidad, sold, 89s; Grenada, fine, 85s.

TEA.—During the week 32,000 packages Indian and 31,000 packages Ceylon were offered in auction, and while all the better liquoring sorts met a fair demand at a steady range of prices, low descriptions moved off quietly at irregular quotations.

RICE.—Market firm, with a fair demand, partly on export account. Bran firmly held, though trade proceeded quietly. Beans and peas quiet.

SPICE.—A moderate trade resulted in pepper, and a firm tone prevailed, especially for white descriptions. Fair black Singapore, spot, sold, 6¾d; ditto, October-December, 6⅞d to 7d; Lampong, spot, 7¼d; Aleppy, 7d; Tellicherry, 7¾d; white Singapore, 1s 2d; Muntok, 1s 3d; ditto, October-December, sold, 1s 1¼d. Zanzibar cloves, spot, sold, 1s 7d. Pimento, spot, sellers, at 4d. Tapioca slow. Fair flake, spot, 2⅜d per lb; ditto, October-December, steamer, 22s 6d; fair Penang seed pearl, spot, 25s; ditto, October-December, 26s; small sago, spot, 33s to 35s, as to sample; sago flour, September-November, sold, 22s 6d to 21s 6d. Farina, spot, 31s; afloat and September-November, sold, 31s to 30s. Desiccated coconut, fine cut, spot, sold, 83s; medium, 95s; coarse, 75s to 76s.

FRUIT (DRIED).—Currants firm, and confectionery kinds scarce. Amalia quoted 60s to 70s; Gulph, 80s to 92s; Vostizza, 90s to 96s. Sultanas firmly held with a fair inquiry. Dates steady. Hallowee, spot, 48s.

JUTE.—Only quiet trading ensued, but with sellers offering with some reserve, prices ruled firmer for new crop. Native first marks assortment, old crop, August-September, actuals, quoted £43; subs, £39 10s; actuals new, August-September, sold, £47 to £47 10s, closing sellers, £49; and September-October, sold, £48. Lightning subs, old crop, August-September, Antwerp, sold, £33 10s. Hessians and twills steady, but slow.

HEMP.—Manila dull, and prices barely steady. J grade, spot, sold, £65-£65 10s; K, ditto, £56; J, August-October, £66; K, ditto, quoted £56, New Zealand steadily held, but general trade slow. Italian quiet,

SHELLAC.—Market rather irregular. Fair T.N., spot, 670s; October, sold, 600s to 585s and 580s.

COPRA.—Market steady, though quiet. F.M.S. Straits, arrived, London, sold, £53; August-October, £53 15s; October-December, £54 5s to £54 10s; Ceylon, October-December, Antwerp, sold, £56; London, £55 to £55 5s; Rotterdam, £56 10s; F.M. An International Bank for the Development of Trade

THE Guaranty Trust Company of New York, through its Offices in London and Liverpool, offers its facilities to meet the financial needs of established merchants and manufacturers.

Acting in co-operation with the Company's Offices in the United States and Europe, with affiliated companies in South America and the Far East and correspondents and connections in all the chief centres of the world, these Offices are in a position to finance imports of raw materials and exports of manufactured goods, whatever their origin or destination.

Behind these facilities there is a readiness and ability of the Company to serve its customers and business men generally in matters of trade and credit information.

NATIONAL BANK OF COMMERCE 1839 IN NEW YORK

(*Continued from page* 382.)

the middle of the week, on moderate offers, which were quietly met, cash fluctuating down to £269 10s, and three months' to £276, subsequently done at £276 5s. Thursday's movements were somewhat irregular, with better buying, chiefly forward. Cash sold at £267 10s to £268 10s; October dates at £271 to £274 10s, and finally at £273 10s; three months', £274 to £276 5s. At Friday's session values declined, dealings being limited in cash at £268 to £267; October dates, £271 to £270; and three months' £275 to £274, settling down at £274 10s. Copper: The standard market opened rather better, and values moved in a steadier direction, cash by Wednesday improving to £95 5s, and three months' to £96 10s, while since registered at £96 5s. Little change occurred on Thursday, business comprising cash at £95 to £95 2s 6d, and early October at £95 5s. At Friday's session the tendency was again in sellers' favour, cash being sold at £95 to £95 15s, and three months' at £96 10s. Electros, £111 to £117; best selected, £106 to £107; strong sheets, £166. Lead firmer at £36 10s. Spelter easier at £39 5s to £41 10s. Antimony: English, Regulus, ordinary to best, £52 to £55. Aluminium: Home trade, £165; export, £185. Quicksilver reduced to £18 10s.

TALLOW.—Messrs Colchesters and Woolner write on September 1st as follows:—The tallow market was steady during the week, and prices were maintained to-day. The business done during the week was on a fair scale, mere attention being given to better qualities than to inferior kinds. The stock in London on August 31st, as returned by the wharves, amounted to 25,712 packages, being an increase during the month of 662 packages. At auction to-day 1,374 casks tallow were offered, and 277 were sold. Quotations are:—Australian mutton: Fine, 78s; good to fair, 77s to 72s; dull to dark, 69s 6d to 65s; hard, 79s. Australian beef: Fine, 77s; good to fair, 75s to 70s; dull to dark, 67s to 63s; sweet, 80s. Present shipment from Australasia: Mutton, fair coloured, 48 degs., 78s; and mixed, 43½, c.i.f., London, 75s. The market letter is unchanged. Town tallow, 67s per cwt. Rough fat per 8 lbs, 8½d to 1s 4½d; melted stuff, 51s per cwt. Quotations are:—Town: 65s net cash, naked, ex works. Country: Frail casks, 57s; home melted, shipping casks, net, f.o.b., good coloured, none; fair to dull, 67s to 62s. Bone fat: White, none; pale, 62s; benzine, 56s; melted stuff, 57s, f.o.b.

THE MONEY MARKET.

MONEY has not been nearly as plentiful as dealers in credit would have liked to see it, and there was much discussion and doubt as to why this should be so. Probably the explanation is that there is really enough money in Lombard Street to go round, but it nevertheless seems to be scarce because the monetary machine is working slowly and cautiously owing to the many reasons, including the possibility of a coal strike, which make people think rather longer than usual before they put any operation through. The general sentiment seems to be rather "jumpy," and on Wednesday a quite small amount was borrowed from the Bank of England apparently by accident. On Thursday October bills were offered to the Bank for discount, and were only taken subject to the condition that the pro-

ceeds should be invested in December Treasury bills. This condition tended to increase the market's jumpiness, but when people ask for unusual facilities instead of borrowing outright, or offering bills of the usual short currency, they cannot complain if they receive abnormal treatment, especially in abnormal times. The desire to enforce applications for Treasury bills was also understood to be the cause of the Bank of England's action in intimating that any attempt to raise credits here for Norway, which have lately been the subject of tentative negotiation, would be met by a rise in Bank rate. Thus the Treasury bill nuisance was very much to the fore this week, and seems likely to be a clog on the free movement of the money market until it is got out of the way, to which end a forced loan receives growing recognition as the simplest method. A considerable payment was made on account of German debts to British creditors, and might have been expected to increase the supply of credit since the funds presumably came out of a Government department. But a large part of the proceeds was no doubt used in repayment of advances against bills that have been in "cold storage" since the beginning of the war. The net result of these baffling cross-currents was a distinct hardening in discount rates.

The Bank return showed decreases of £5,000 in the stock of gold, and £624,000 in the note circulation (in spite of the transfer of £50,000 to the Bradbury reserve), and a consequent increase of £619,000 in the Reserve. Government securities rose by £2,220,000, and Other by £874,000, and so there was a total increase of £3¾ millions in the deposits, nearly the whole of which went to Other. An addition of £2,000 was made to the circulation of currency notes, making it £355,188,600, including £3,628,900 for notes called in but not yet cancelled. The reserve of Bank of England notes was increased by £50,000, making the fiduciary issue £308,038,600, or £12,561,400 below the maximum.

* * * *

The following table shows Public Income and Expenditure for the week ended September 4, 1920 :—

Receipts.	Mln. £	Expenditure.	Mln. £
From Revenue	16·029	Supply Services	10·564
Taken from Exchequer balances	216	Interest on Debt	18·291
Amount borrowed	12·856	Sundries	246
	29·101		29·101

These operations increased the debt by a sum of £12,855,618, and caused the following changes, which are reflected in our table of National Debt given in another column :—

	Mln. £		Mln. £
Bank of England Advances	+ 22·500	Advances of Public Departs.' repaid	— 7·050
Treasury Bonds	+ ·180	Surrenders of Bonds, &c.	— 585
National Savings Certificates	+ ·150	Other Debt	— 4·111
Treasury Bills	+ 2·381	Depreciation Fund	— 660
Sundries	+ 50		
	+ 25·2		— 12·406

Revenue contributed £16,029,422 to an expenditure of £29,100,792. Of this expenditure interest on debt absorbed over £18 millions. The principal sources of revenue were Customs and Excise, £3,774,000; Property and Income Tax, £5,821,000; and Excise Profits Duty, £3,071,000.

* * * *

The market view of the terms under which the new French loan has been concluded in New York is reflected in the further steady fall in the value of the franc, after a very slight recovery on Saturday last. Yesterday the announcement that the lists had been closed an hour after opening was followed by a further fall, the franc at mid-day standing at 52.60, as compared with 51.50 a week ago. It is perhaps unfair to attribute the whole of this movement to the loan itself, since the French Government is reported to be still buying large quantities of dollars in order to provide funds to meet the part of the Anglo-French Loan not covered by the new operation. Francs for future delivery remain unchanged at about 15 to 20 centimes per month below spot. It is probably also due in large part to these French purchases of dollars that the value of sterling has also continued to decline, standing yesterday at 3.52, as compared with 3.56 at the close of business a week ago. The continued pressure of autumn business, the attraction of high money rates in New York, and the expectation of cotton bills which have not yet appeared as freely as is usual at this season, are, however, in themselves almost sufficient to account for the present figure. The quotation for futures, after widening appreciably during the week, is again closer to spot, being about the same as a week ago—*i.e.*, one to one and a half cents per month over spot, for the longer periods, but rather narrower for short periods. The Brussels rate continues to move more or less in sympathy with Paris, being 49.25 yesterday, as compared with 48.35 a week ago. At 3.35, however, the spread between Paris and Brussels has again widened 20 centimes, while the quotation of 20 to 30 centimes per month below spot for future Brussels also shows a more optimistic estimate than in the case of Paris. Continued labour difficulties in Italy, and little prospect of a satisfactory solution, are enough in themselves to account for a further rise in the lira quotation from 76.50 a week ago to 81.25 yesterday. Among the neutral exchanges, Amsterdam has risen again from 11.14 to 11.22, a quotation nearly as high as a fortnight ago; while, on the other hand, future quotations are tending to be slightly wider. Geneva at 21.57 has gone slightly in our favour, Madrid at 23.87 slightly against us. Stockholm has fallen steadily from 17.69 to 17.28, while Christiania and Copenhagen have risen equally steadily from 24.22½ to 24.72½, and from 24.52½ to 24.90½ respectively, none of the rumoured negotiations for loans, either here or in America, having yet come to fruition. Berlin, possibly as the result of the new experiment of free exchange dealings, has moved more rapidly than has been customary of late, from 178 a week ago to 189 yesterday, while, on the other hand, the rate for futures shows a distinct tendency to widen. After some increase in value, silver has ended up at the same rate as the week before. Rupees are practically unchanged, Hong Kong and Shanghai are both ½d dearer. In sympathy, as usual, with the dollar, Buenos Ayres at 58d is 1¼d dearer than a week ago.

EVENTS OF THE WEEK.

SEPTEMBER 4TH.—French Government ships gold to New York. Lock-out of electricians.

SEPTEMBER 6TH.—Trades Union Congress opens at Portsmouth. Terms of French loan in New York made known.

SEPTEMBER 7TH.—Sir R. Horne invites miners' executive to Conference. Severe earthquake shocks in Italy. Premier returns to London.

SEPTEMBER 8TH.—Trades Union Congress discusses Russia and cost of living report.

SEPTEMBER 9TH.—Sir R. Horne refuses to discuss question of coal prices with miners' executive. His proposals for a conference with coal-owners rejected by miners. Clearing house for Austrian debts to be established. Increase in naval pensions announced. French loan for $100 millions in New York subscribed in one hour.

LABOUR AND PRICES.

OPPORTUNELY enough at a time when industrial strife threatens to make everything dearer than ever, comes an interim Report* on Money and Prices from the Joint Committee on the Cost of Living appointed by the Parliamentary Committee of the Trades Union Congress. The Joint Committee included, among other prominent Labour leaders, Messrs Thomas (chairman), Bowerman (secretary), Cramp, Ramsay Macdonald, Smillie, and Hodges, and Mrs Cottrell and Mrs Harrison Bell; and it took evidence or received memoranda from Sir James Wilson, Sir Geo. Paish, Professor Pigou, and Messrs McKenna, Hobson, Pethick Lawrence, Dalton, and other economists and men of affairs. The report is admirably brief and businesslike, and in its 22 pages it gives a survey of the monetary position in its relation to prices at home and abroad, and suggests remedies which, if sometimes questionable, are generally definite and clear. It states the Committee's conclusion that the rise in prices is due more to currency expansion than to contracted production; that the first thing to be done is to deal with this expansion, and reduce it, where this is possible, to a point which will eliminate the depreciation of currency in terms of gold. For this country the Committee thinks that (*a*) an amount should be fixed which the fiduciary currency issue must not exceed, this amount to be gradually and periodically reduced; (*b*) the Government should cease entirely to meet expenditure out of bank credits; and (*c*) the floating debt should be repaid or funded. Few will question that (*b*) and (*c*) are desirable; but (*a*) suggests a policy that would have to be handled very carefully, and the Committee rightly doubted the practicability of a rather precipitate proposal put to them by Mr Hugh Dalton, of the London School of Economics, that the fiduciary issue should be reduced at the rate of two millions a week. Further, the Committee thinks that the banking system of the country should be "publicly controlled," by which they appear to mean that it should be managed by the Government. The rather unconvincing arguments in favour of this conclusion are based on the amalgamation process visible among the banks, "the growing part which financial interests are beginning to play in the direction and control of industry," and the fact, or view, "that the stock-in-trade of the banks is derived from the combined resources of the people as a whole. Their funds are the people's funds, and the realisation of democratic ideals necessitates that the banks should be popular institutions." A good deal of this reasoning seems to be extraordinarily unsound. Certainly the amalgamation process has put a weapon into the hands of the nationalisers; but the banks' funds are not "the people's" funds, but their customers', and their customers, if consulted, would probably object very strongly to see them tied up in official red tape. The Committee, however, is on stronger ground when it goes on to lay down that Government expenditure on military and naval enterprises should cease, that Peace should be established throughout the world, and that war indemnities should be defined, and reasonable in amount. But what becomes of self-determination when we are told that "every country should be required to take all possible steps to rehabilitate its currency"? It is most desirable that they should do so, but the Trades' Union Congress is not yet in a position to "require" even a sound policy from all the countries of the world. And then there is a suggestion that an international loan should be floated by the League of Nations in order to provide impoverished countries with the means of restoring their productive capacity. This is quite a nice idea if it could be worked; but though the Committee says a good deal about the conditions on which the League of Nations should grant portions of the loan to the borrowing countries, its Report says not a word about the security which the League of Nations would have to offer. Is it to assume the right to pledge the revenues of all countries which belong to it? If it attempted to do so without their consent any bonds that it might issue would be worthless, and is it likely under present circumstances to get the consent of any for more than trifling sums? Finally, the Report observes that "we are convinced that the high cost of living is due largely to the defects and weaknesses of the industrial system. We accept the fact as expressed by Mr H. D. Henderson" [of Clare College, Cambridge] "in his memorandum that 'the present dilemma in which it is virtually impossible to check the tide of rising prices, without paralysing trade and industry, represents one more instance of the growing instability, inadequacy, and disintegration of the capitalist system.'" This is, perhaps, rather hard on the capitalist system, which was doing fairly good work on the whole until the war came, and a set of short-sighted politicians and officials took hold of its machinery and abused it, and produced chaos by a currency debauch. And would a nationalised banking system do better? One of the argu-

ments for it put forward by Sir Leo Chiozza Money, in his new book on "The Triumph of Nationalisation," is that "the building of houses is almost wholly concerned with domestic materials and domestic services. The production and exchange of these could be financed to any extent by a State Bank, with absolute safety and security." If Sir Leo means, as he seems to do, that house building and other domestic needs should be financed by creations of new credit by a State Bank, we can only shudder at the probable effect of such a system on "the tide of rising prices." If he does not mean this it does not follow that a State Bank could handle the business of real borrowing better than a private one, and it is at least probable that it would not do so as well. Australia has a State Bank, but its Peace Loan, according to telegrams in the *Times* of September 8th and 9th, is not going through with a rush.

The Trades' Union Congress Joint Committee, however, seem to have found clearer light than Sir Leo with regard to the effects on prices of currency and credit inflation, though some of the remedies that they suggest are not likely to be endorsed by men of experience in finance. They themselves hesitate to recommend too drastic deflation owing to the well-based fear of unemployment and check to trade, but on the other hand, have definitely ranged themselves against the champions of further inflation, who want to stimulate trade by unlimited credit expansion. But surely there is a middle course. If, as the committee suggest, the Government ceased entirely to resort to bank credits to meet expenditure (or, it should be added, to meet maturing debt) and the floating debt were funded, then the expansion of credit would be stopped, as long as the banks did not allow their proportion of cash to deposits to decline, and to secure this proviso, monthly publication of their figures might very well be revived. When once the further expansion of credit is stopped, then the best way to secure a wholesome and gradual fall in prices is by tackling the problem at the other end, and increasing the output of goods. Goods are what the world is crying for, and unless and until we get the goods, the soundest recommendations with regard to currency policy will avail us little. The committee express their own belief that the figure of 20 per cent. is nearer the mark than 10 per cent. for the fall in the world's production of commodities as a whole. To some extent this fall may have been inevitable, but everyone knows that it has been helped by deliberate restriction of output both by employers and by wage-earners. On the sorry spectacle of a bitter struggle between Capital and Labour at a time of general scarcity, and on the blame that is due to both parties, we commend to our readers' attention the observations of the chairman of the Bank of New Zealand, given on a later page. Many wage-earners suffer from a delusion that they help their own interests and those of their fellows by deliberately limiting output. The only preachers who can effectively exercise this fallacy are the wage-earners' own leaders, who state themselves in this Report that "an increase in the production of all useful things is one of the world's most urgent needs." Having dealt with the money side of the price question, they will naturally proceed to the goods side of the problem; and we hope with confidence for a strong and authoritative pronouncement from them in which, having belaboured the capitalist as hard as they like, they will show Labour that the policy of restricted output can only lead to unemployment and bare cupboards.

OVERSEAS TRADE IN AUGUST.

The Board of Trade returns of Overseas trade for August again make a very good showing, the visible balance of exports being just under £25 millions, as compared with £58½ millions for August, 1919, and a monthly average for the first six months of this year of £43⅓ millions. The adverse balance for July on the published figures, it may be recalled, was only £8 millions—quite an abnormally low figure—and there is ground for satisfaction in the fact that the August figures do not show a greater reaction. As compared with July last, imports show a decline of over £10 millions, British exports are £22½ millions lower, and re-exports £4½ millions lower, the explanation for these decreases being, no doubt, the holidays at the beginning of the month. As compared with August, 1913, imports are up by £97¼ millions, British exports by £70¾ millions, and re-exports by £5¼ millions. The value figures for August and the eight months are compared with those of 1919 in the tables below :—

Month of August.

	1919.	1920.	Increase or Decrease in August, 1920.	
	£	£	£	%
Imports	148,749,259	153,254,578	+ 4,505,319	+ 3·0

Excess of imports over total exports	460,788,253	292,034,392	—168,673,861	— 36·5

A close examination of the detailed figures for August rather detracts from their excellence, for while the total only increased by £4½ millions, imports of manufactures went up by no less than £17½ millions. Until recently, some consolation was found for the steady increases shown in imports from the fact that the expansion was occurring mostly under the heading of raw materials and food, but last month the position was reversed, food imports declining by over £9 millions, and imports of raw materials by £3½ millions. On the other hand, it is satisfactory to find that of the total increase in British exports, nearly £37 millions occurs under manufactured goods. As compared with August, 1919, there are some striking changes, which can be more clearly shown in tabular form :—

Increases.	Million £.	Decreases.	Million £.
Imports.		Imports.	
Grain and flour	+ 7·6	Meat	— 10·1
Wood and timber	+ 1·2	Edible oils and fats	— 4·1

		Raw materials	— 2·3

Of the decline in meat imports, £6 millions is due to bacon from U.S.A., and over £2¼ millions to hams from the same country. Again raw cotton imports from the United States fell by £6½ millions, and leather and manufactures thereof by over £2 millions. These figures are all to the good from the exchange point of view. A large proportion of the increase in the export of cotton goods is accounted for by India, China and Australasia. The bullion and specie account shows exports of gold bullion and coin for August amounting to £4¾ millions, of which £3,346,000 went to the United States and £1,118,500 to India. Imports for the month were £3¾ millions, of which £2,624,400 came from the Transvaal and £715,500 from Russia. The return of dutiable goods in bond on the last day of August shows that nearly all stocks were considerably higher than on the corresponding date of last year. For example, tea, 22½ million pounds, against 133 million pounds a year ago; unmanufactured tobacco, 337 million pounds, against 231¼ million pounds; wine,

14 million gallons, against 9½ million gallons; and home-made spirits, 129 million proof gallons, against 117¾ millions.

The usual detailed figures are appended :—

IMPORTS (Value C.I.F.).

THE DECLINE IN SECURITY VALUES.

WE do not propose to diagnose the complaint nor yet to prescribe any remedy for the severe depreciation which has taken place in recent years, and especially during the past nine months, in investment values, but merely to put before our readers a few figures illustrating what has happened since the beginning of the war to the market valuation of various classes of stocks and shares. For this purpose we have taken the well-known series of figures compiled every month by our contemporary, the *Banker's Magazine,* and prepared a few small tables, which show in which direction the decline has been most serious. In normal times the figures compiled by the *Bankers' Magazine* are revised every ten years or so, in order to keep the valuation of securities well up to date and thoroughly representative of market movements. The last revision was made in 1907, that list being retained at present in order to maintain the continuity of comparison. The list comprises 387 representative securities, whose market value on January 20, 1907, the date on which the list was revised, was £3,843 millions. What has happened since then may be seen from the following figures :—

	Million £.		
January 20, 1907	3,843	....	100
December 18, 1913	3,341	....	87
April 20, 1918	2,572	....	67
November 19, 1918	2,822	....	74
July 19, 1920	2,395	....	63

The highest point touched during the period covered by the figures was the starting-point in 1907, and down to the time of the Armistice the lowest was on April 20, 1918, one of the most critical times of the war.

As regards individual groups of securities, it is found that the severest decline in market value has taken place in fixed interest-bearing securities. In the tables which follow, the valuation of December 18, 1913, has been taken as 100, in order to show the percentage decline which occurred down to the date of the Armistice, and again since that time. The first table gives the movement in the valuation of gilt-edged securities :—

	Dec. 18, 1913.	Nov. 19, 1918.	July 19, 1920.
British and Indian Funds .....(9)	100	86	70
Corporation (U.K.) stocks .....(7)	100	84	71
Colonial Government stocks....(11)	100	93	86
Col. and for. corptn. stocks ....(10)	100	84	71
Foreign Government stocks ....(31)	100	74	52

The greatest resistance to the decline is shown by Colonial Government stocks. It must not be forgotten that the list was compiled in 1907, and the first item therefore does not include any of the war loans. Corporation stocks, both home and overseas, show the same movement. Foreign Government stocks, which undoubtedly include several German, Austrian, and Russian securities, naturally show the severest decline.

Turning to railway stocks, we find the following movements :—

	Dec. 18, 1913.	Nov. 19, 1918.	July 19, 1920.
British railway ord. stocks ....(26)	100	76	65
Do deb. stocks .....(11)	100	80	62
Do pref. stocks.....(13)	100	77	63
Indian railway stocks .....(5)	100	84	76
Railways in British Possessions. (9)	100	74	54
American railway shares .....(17)	100	83	81
Do bonds (gold) .....(16)	100	93	94
Foreign railways .....(24)	100	75	68

Here we see Home Railway ordinary stocks almost down to the level of the fixed interest prior-charge stocks. Railways in British Possessions show an extraordinary decline, probably owing to the movement in Grand Trunk stocks, but American railway securities have changed very little since the Armistice. There can have been very few buyers except the Treasury during the war, but the gain on exchange in dividend and interest payments doubtless accounts for the steadiness since the Armistice. The next table gives investments in public utility companies :—

	Dec. 18, 1913.	Nov. 19, 1918.	July 19, 1920.
Canals and docks .....(4)	100	108	105
Electric lighting and power ....(6)	100	86	73
Gas stocks .....(5)	100	71	60
Telegraphs and telephones .....(4)	100	119	106
Tramways and omnibus .....(7)	100	92	85
Waterworks .....(4)	100	93	78

The renewed prosperity brought to canal companies by the war is clearly reflected, but water, gas, and electric light companies show a severe decline, especially in the second period.

Some interesting changes are shown in the next table, which gives financial and industrial securities :—

	Dec. 18, 1913.	Nov. 19, 1918.	July 19, 1920.
Shipping shares.....(7)	100	174	166
Insurance shares.....(21)	100	116	128
Brewery stocks.....(18)	100	109	124
British bank shares .....(14)	100	98	92
Colonial bank shares.....(9)	100	117	99
Semi-foreign bank shares .....(13)	100	106	105
Financial, land, and investment(11)	100	93	87
Iron, coal, and steel .....(8)	100	108	89

The stock markets have thoroughly appreciated what the war has done for certain industries, but the falling away in iron, coal, and steel shares since the war is rather remarkable. The final table gives " Commercial industrial " shares and mining securities :—

	Dec. 18, 1913.	Nov. 19, 1918.	July 19, 1920.
Commercial industrial shares ..(38)	100	102	82
South African mines, &c. .....(15)	100	92	96
Copper mining shares .....(6)	100	117	92
Miscellaneous mining shares ....(8)	100	138	118

A feature here is the improvement since the Armistice in Kaffir securities, owing, no doubt, to the premium since July, 1919, on the price of gold. Taking the total value of the 387 securities on December 18, 1913, as 100, the value on November 19, 1918, works out at 85, and on July 19, 1920, at 72.

THE ELECTRICAL TRADE.

THE records of our foreign trade in electrical goods and apparatus are difficult to handle because of great irregularity in the exports. In some years the execution of a big submarine cable contract will double exports, which afterwards will fall back 50 per cent. to the normal level again. This peculiarity of the trade showed itself as early as 1870, when exports of telegraph wire and apparatus jumped to 2½ millions sterling, after being about a quarter of a million two years before. In 1872 shipments fell below half a million, rising next year to 2¼ millions, and fluctuating in succeeding years between half a million and three millions. It is manifest that the only satisfactory way of dealing with such a trade is by means of averages, and this is done in the following table, which gives the statistics since they were made perfectly comparable by the Board of Trade :—

OVERSEA TRADE in ELECTRICAL GOODS and APPARATUS (other than Machinery).

5 Years' Averages.	*Exports. Thous. £.	Net Imports. Thous. £.	Excess of Exports. Thous. £.
1889-93	*1,434	..	..
1894-98	*1,387	†278	..
1899-03	*2,982	825	2,157
1904-08	2,167	1,000	1,167
1909-13	3,776	1,299	2,477

*Uninsulated telegraph and telephone wire was included in exports until 1903.

† Two years only, 1897-98. Imports were not separately entered before

It will be seen that even when exports are reduced to averages they are still comparatively irregular, and progress by fits and starts. But, on the whole, the tendency was not bad for the 25 years preceding the war. It was a time when there was a considerable struggle in progress between British and foreign manufacturers, and some of our firms which have proved most successful had only just been established in the earlier part of this period. These have since given a very good account of themselves.

It is true that in the early years of this century net imports (imports less re-exports) jumped up by about 200 per cent. This was largely due to the Americans, who in 1900 made a very determined effort to secure a footing in the British market. In 1897 gross imports from all sources were worth less than a quarter of a million, but three years later, in 1900, they exceeded 1¼ millions in value, of which more than £800,000 worth came from the United States.

No doubt in this trade, as in others, the Americans had very big ideas as to what they could do in our market. They seem to have thought that our captains of industry were sleepy and unenterprising. If they were right, the Yankee invasion was the very thing to wake our men up and put them on their mettle. This it certainly did, and a dramatic impression was at once made on the receipts from America. These fell precipitately from over £800,000 in 1900 to £388,000 in 1901, and dribbled further to £159,000 in 1902, £125,000 in 1903, £104,000 in 1904, and still lower in some later years.

But meantime Germany was becoming year by year steadily stronger. She did not make one great, spectacular descent upon the market, like the Americans, but by sheer force of quality and cheapness increased her sales here almost every year from 1900 to 1910, when the German goods we retained for home consumption were worth over a million sterling. These goods included seven millions of glow lamps, worth upwards of half a million sterling, about £350,000 worth of insulated wires and cables, and smaller values in telegraph and telephone apparatus, carbons, parts of electric lamps, and so on. That year, however, saw German success pass its meridian, for from 1910 to 1913 there was a fall, particularly in glow lamps, which declined in number from 7 to 2½ millions, and in value from more than half a million sterling to £155,000. Probably this victory should be set down to the credit of the excellent British metal-filament lamp.

Of course, since 1913 German competition has been dead, and this is the record of our foreign trade :—

THE ELECTRICAL TRADE SINCE the WAR.

	Exports. Thous. £.	Net Imports. Thous. £.	Excess of Exports. Thous. £.
1913	5,386	1,348	4,038
1914	3,019	1,057	1,962
1915	3,169	941	2,228
1916	4,084	1,501	2,583
1917	2,926	1,141	1,785
1918	2,389	994	1,395
1919	5,813	1,102	4,711

Germany's place as principal supplier of goods to us has been taken by the United States, but American business men do not seem happy in catering for Britain. Since 1916 the value of the goods sent here by them has fallen from about three-quarters of a million to about half a million sterling, and these consist mainly of miscellaneous unenumerated goods. It would appear that our manufacturers need not be nervous about American competition, and from other directions they will have nothing to fear for some time to come. The year 1920 bids fair to be a bumper one for them, as in the first half exports were at the rate of 10 millions sterling per annum, while net imports were at the rate of about a million.

Business Notes.

Home Crops.—The monthly report of the Ministry of Agriculture and Fisheries states that the first half of August was cold and wet in most parts of the country, but conditions were better, although the cold persisted, during the latter part of the month. Crops therefore ripened slowly, and harvesting generally is late. The corn crops are better in the eastern half of the country, where the weather conditions were more favourable, and on the whole they may there be regarded as almost average, whereas in the West they are decidedly below. The harvest is generally nearing completion in the southern and eastern counties, in full swing in the Midlands, and is well in progress in the North. Wheat is best in the South-East, Essex especially being over average. Barley is in most parts—but not everywhere—the best of the cereals, the best reports coming from the North-East. Oats, on the other hand, are the poorest of the three, although winter oats are satisfactory. Beans are better than the cereals, and a heavy crop generally; peas are more variable, being good in the Midlands, but poor in the South-West, and on the whole will be about average. Prospects for potatoes have decidedly fallen off during the month, and the crop is likely to be below average. There is a certain amount of disease in most parts of the country—more than last year; but the progress of the disease was generally checked towards the end of the month. It is most prevalent in the South-West, where the yield is expected to be very poor. Roots have made comparatively little growth during the month, and the fields are often foul with weeds. Haymaking has been protracted; in few parts of the country is it completely finished, and in many parts there is still some to cut. The bulk is heavy, the meadows yielding, relatively, better than seeds' hay. Hops have matured slowly, owing to the lack of warm weather, and the cones are reported generally small. Nevertheless, the crop in the South-East is a heavy one, probably 20 per cent. above average in Kent. In the Worcestershire area, on the other hand, the crop appears to be considerably below the average. Mould and red spider have appeared in many gardens. All orchard fruit is short, with the exception of some varieties of plums in some areas; apples are very poor indeed. The pastures are full of keep, and the cool weather appears to have had no ill effects upon live stock, both cattle and sheep having thriven well during the month. The supply of general agricultural labour is sufficient or ample in practically all districts, though here and there there is a shortage of skilled labour on the one hand, and casual labour in a few areas on the other. Summarising the returns, and expressing an average crop by 100, the appearance of the crops indicated probable yields per acre shown by the following percentages:—Wheat, 95; barley, 98; oats, 94; beans, 102; peas, 99; potatoes, 92; turnips and swedes, 96; mangolds, 90; seeds' hay, 104; meadow hay, 106; hops, 110.

July Railway Earnings.—The financial results of railway working for July were published yesterday by the Ministry of Transport. Total revenue earned amounted to £23,228,447, making a total for the four months of £81,178,600. Expenditure for July was £20,793,962, and for the four months £77,993,264. After allowing for "other businesses" the excess of revenue over expenditure was £2,323,083 for July and £2,681,323 for the four months. The Government guarantee for July was £4,912,000, making the net Government liability £2,588,917 for the month of July and £13,515,677 for the four months of the financial year.

The Sale of German Ships.—Considerable progress towards making good the deficiency of British liner tonnage is likely to be made as the result of the offer for sale this week of a large number of ex-enemy vessels. Lord Inchcape, acting on behalf of the Ministry of Shipping and the Reparation Commission, is inviting offers for 42 passenger liners, formerly owned by German shipping companies. The names and gross tonnage of the vessels for sale are as follows:—

Alexandra	1,117	Main	10,058
Alexandra Woermann	3,828	Meteor	3,613
Bahia Castilio	9,959	Mobile	16,960
Berlin	17,324	Patricia	14,466
Bismarck	56,000	Pretoria	13,234
Brandenburg	7,532	Prinzessin	6,387
Bremen	11,540	Prinz Friedrich Wilhelm	17,083
Cap Verde	5,509	Prinz Hubertus	7,500
Chemnitz	7,542	Prinz Ludwig	9,687
Eduard Woermann	5,609	Rio Negro	4,556
Frankfurt	7,431	Rio Pardo	4,621
Graf Waldersee	13,193	Roon	8,174
Hannover	7,305	Rugia	6,605
Heluan	7,246	Steigerwald	4,836
Imperator	51,969	Swakopmund	5,631
Kaiserin Auguste Victoria	24,581	Valencia	5,232
Kigoma	8,155	Wadia	7,500
Konig Friedrich August	9,462	Wahere	7,371
Konigin Luise	10,785	Windhuk	6,343
La Plata	4,032	Ypiranga	8,103
Lucia Woermann	4,630	Zeppelin	14,167

This list represents a total of about 457,000 gross tons. The Imperator, which is included in the list, is at present being run by the Cunard Company as agents of the Shipping Controller. Full details of the vessels are obtainable on application to Lord Inchcape, 122 Leadenhall street, E.C.

HARRISONS & CROSFIELD, LIMITED.

Eastern and General Merchants.
Commercial Agents for Sale of Produce.
The Company undertakes Selling Agencies abroad for British Manufacturers.

1-4, Great Tower Street, London, E.C. 3.

Short Time in the Cotton Trade.—Our Manchester correspondent writes:—Owing to the depression in the Lancashire cotton industry, short time working in the mills is being considered by the employers. At the end of last week the matter was discussed at the ordinary monthly meeting of the general committee of the Master Spinners' Federation, when it was decided to refer the question to the emergency committee. Since then the opinion of the district associations has been obtained, and it is understood that the emergency committee will come to a decision at a special meeting to be held next Tuesday. In the past, when action of this kind has been proposed, the recommendation to the members of the Federation has generally taken the form of closing the mills engaged on American cotton on Saturdays and Mondays during a period of three months. In certain trade quarters, however, it is being urged that a scheme of this kind will not be sufficient to bring relief and more drastic action is being suggested. During recent years the trade union officials have argued that they should be consulted when the employers consider it necessary to restrict output, and should the Masters' Federation propose to close the mills for a week at a time the scheme will certainly be resented by the leaders of the operatives as in such a case the workpeople will be able to claim unemployment pay from the funds of the unions. It is not likely that anything will be done in the way of curtailment of production on an organised scale in the mills using Egyptian cotton or in the weaving section, although trade is bad, as in these two departments there is always difficulty in securing unanimity for united action.

South African Trade.—A cable received by the National Bank of South Africa from their head office, Pretoria, states that according to the returns for the six months ending June, the trade balance shows a decline of about £27,000,000 as compared with a similar period in 1919, imports being £48,000,000 against £28,250,000, exports £51,000,000 against £58,250,000. Imports from United

Kingdom were £22,624,500, representing 56 per cent. total imports, against £11,373,000, or 44 per cent. United States now 17 per cent. against 27 per cent., Australia £1,842,800 against £784,000, Japan £612,415 against £1,137,300. Exports to United Kingdom were £36,356,700, or 71 per cent., against £48,107,100, or 82 per cent., to Japan £5,792,000, or 11 per cent., against £1,591,400, or 3 per cent., to United States £3,362,300 against £4,586,200. Chief items of exports are :—

	£
Raw gold	19,000,000
Wool	14,000,000
Diamonds	7,000,000
Hides and skins	3,500,000
Food and drink	1,500,000

There is generally a brighter tone in commercial circles up country, but the Rand engine drivers' week-end strike caused misgivings. Most of the Rand mining groups are buying more freely, and the Belgian Congo mines are in the market for mixed hardware. Trade in soft goods, especially woollens, restricted. Retailers' indents are sparing in the hopes of lower levels. Country drapery business good, especially in new season's piece goods. The grocery trade kept up well during the month, retailers displaying a better buying disposition, but their buying is confined to necessaries and ready sellers. Retailers' stocks are not heavy. Coffee market declines steadily, merchants facing a heavy loss on present stocks. The coal position is serious, ships waiting. Bunkers collieries unable to feed ports owing to lack of railway rolling stock, and matters are aggravated by engineers' strike, which brought repair work to a standstill. The insistent demand for coal properties recently shows that the country's possibilities in this direction are at length being recognised. Union making strides in the production of iron and steel. Great possibilities in this industry. In the Advisory Board of Industry and Science Report, 1919, just published, the Tariff Committee recommends more scientific classification of tariff, and provision of means whereby articles locally manufactured and raw materials essential to such manufactures may be classified in separate schedules. 1. Revenue. 2. Industries. 3. Machinery implements and raw materials used in manufacture. Committee are of the opinion that articles under Schedule 3 should bear a rate of duty in no case higher than 3 per cent., subject to the usual rebate to Great Britain and reciprocating Dominions. They also urge for greater elasticity in the administering of tariff, and the necessity of a permanent Customs Tariff Board to be freed of Customs departmental control.

The New Order in Mexico.—As was expected, General Obregon was last Sunday elected President of Mexico. No details of the voting or of the composition of the new Congress have yet reached Europe, but it is known that the election passed off quietly everywhere, and that all political opposition to the new order has ceased. The new President, representing the party which overthrew Porfirio Diaz in 1911, is carrying on the system initiated by the Provisional Government. He is anxious to be on good terms with the United States and with Europe, to attract foreign capital and enterprise, to deal fairly with the oil interests, to restore prosperity, and to re-establish order and peace. General Alvarado, the Mexican envoy at Washington, predicts early recognition by the United States, and has publicly declared "that all the trains are running on schedule, that all public services are in normal operation, and that the crops this year will be the largest on record." The statistics of the wheat crop show an increase of some 46 per cent. over the figures of 1918. We are informed that all the refugees, with the exception of those directly concerned in President Madero's murder, are back in Mexico, and that their estates have been returned to them by the Provisional Government. The negotiations for a loan from American financiers have not yet been successful, but a correspondent of the *Financier* writes from New York that it is desired, as a beginning, to raise a loan of $75,000,000, to be spent in reorganising the banking system and transport, including the coastal steam services, and incidentally in satisfying the claims of the railway companies, and in finding employment, especially for the ex-revolutionary troops. Another loan of like amount is contemplated in the future. Apparently, therefore, the European bondholders will have to wait for it, but we are informed that there is already a considerable surplus revenue, which the return to order will doubtless increase. The recent alterations in the Customs tariff (published in the *Board of Trade Journal*) seem to be mostly in the direction of reduction and simplification, though protection is given to certain "infant manufactures" of rubber goods. Some export duties on agricultural produce are reduced; that on sugar is maintained; but, under present conditions, the output is not likely to decline. Of course, prosperity is not yet assured; the revolutionists may not settle down easily, except as peasant proprietors or rural police; and the promises of the Provisional Government have been almost too lavish. But the country is tired of revolution, and the hopeful outlook is reflected in the general rise in Government and railway stocks noticed on a later page.

The Position in Ecuador.—Señor Tamajo, the new President, was inaugurated last week; and, in an interview given in July to a correspondent of *The Times*, and published last Tuesday, he has expressed his intention to promote drastic financial reforms. He means to establish a spirit monopoly, to reform the salt and tobacco monopolies, and to encourage foreign capitalists to apply for concessions by offering free entry for their machinery and raw material, and exemptions from taxation. He specially desires that they should undertake the completion of the two new railroads now being constructed from Quito to Esmeraldas, the nearest Ecuadorian port to Panama, and from Sibambe, on the Guayaquil and Quito line, to Cuenca, the chief city in the South. Apparently, the outgoing President has paid the foreign bondholders out of money needed for the civil servants' salaries, and President Tamajo urges that her foreign creditors must give Ecuador time. He suggests that the Guayaquil and Quito bondholders should take over the line, and form a new company to work it, and states that it is generally held in Ecuador that the line should contribute largely to the interest on its bonds. He also suggests an independent audit of its accounts. But such an audit some years ago was entirely favourable to the management, and, as the company is American, it is certain that any attempt at its expropriation by foreclosure or otherwise would invite a diplomatic intervention from Washington, which there are excellent reasons for avoiding. The actual surpluses of gross receipts over working expenses have never sufficed even to meet the Prior Lien interest. But we understand that the country shows signs of progress. Guayaquil, for centuries the most pestilential of South American ports, is at last cleansed and in good sanitary condition; building there is active; yellow fever, thanks to the Rockefeller Commission, is extinct; it is announced that a Transandine district is to be colonised by Germans, and they are likely to settle in more accessible parts of the Republic. Settlement in Ecuador, indeed, has been advocated in Germany for many years, and the settlers should make good colonists, and are not likely, under present conditions, to cause political trouble. Ecuadorian commerce must cease to rely mainly on cocoa—in which it no longer controls the world market—and to depend more on cereals, coffee, sugar, and other products, some of which are at present produced only for the home market. Colonisation and railway extension should help toward this end.

The Position in Japan. — Telegraphic advice dated September 2nd states that the money market is still easy, and the 30,000,000 yen Treasury bills issued on that date were sold out instantly. The cancellation of futures in the cotton yarn and cotton goods markets, which were pending for a long time, were at last satisfactorily concluded. Exports of cotton yarn lately increased, but the market is dull. Stock markets are firm, but silk became dull again as the foreign buying orders were fulfilled. The forecast of rice crops is reported as 58,000,000 kokn, showing a decrease of 3,000,000 kokn. Nevertheless, the prices of both spots and futures are declining on account of the increase of consignment from the farmers, influenced by the expectation of good crops, favoured by the continuous

fine weather. Bank notes in circulation, 1,217,000,000 yen; advances by the Bank of Japan, 482,000,000 yen; call money rate, 7.3 per cent.; discount rate, 9.8 per cent.

Iron and Steel in Rumania.—In a memorandum received from the Department of Overseas Trade, it is stated that the Ministry of Commerce and Industry, together with the Privileged Austro-Hungarian State Railway Company, have constituted a Roumanian company under the style of "Uzinele de fier si domenile din Resita societate anonima" (Iron and Steel Works and Domains of Reshitza Joint Stock Company), with the object of acquiring and working the iron and steel works, mines, and other properties belonging to the Privileged Austro-Hungarian State Railway Company, which are situated in the county of Caras-Severin (Banat). The further objects of the company include the creation of new companies and the erection of new works for the development of the metallurgical industry and the eventual incorporation of all properties in the neighbouring Transylvanian county of Huniedoara, at Inidoara (Vajda-Hunyad) and Cujir (Kudzsir), formerly the property of the Hungarian and now belonging to the Roumanian State. Among other activities of the company may be mentioned the establishment of works for the manufacture of material required in the petrol industry, under the guidance of the Department of Commerce and Industry. The capital is 125,000,000 lei.

Calico Printers'.—A year ago the directors of the Calico Printers' Association were unable to present any accounts owing to difficulties in assessing taxation, and the report published this week therefore covers the two years ended June 30, 1920. As will be seen from the table below, there has been a large increase in the rate of profit, and after allowing a considerably larger amount for maintenance, depreciation, repairs, &c., net profit amounts to £1,216,961 for the two years, as compared with £569,953 for 1917-18:—

Year Ended June 30.	Gross Profit.	Maintenance and Depreciation.	Net Profit, Less Debenture Interest.	To Reserve, &c.	Dividends.	Ord. Rate.
	£	£	£	£	£	%
1906	682,160	200,120	354,040	150,000	201,074	4
1907	776,752	224,711	424,041	150,000	276,476	6¼
1908	383,612	212,237	93,375	..	150,805	nil
1909	448,880	207,565	163,315	*Dr 50,000*	150,805	nil
1910	723,953	201,615	394,338	200,000	201,073	2½
1911	612,630	208,860	403,771	185,000	226,208	3¾
1912	463,904	205,020	130,884	*Dr 80,046*	226,208	3¾
1913	718,851	216,174	374,677	150,000	226,208	3¾
1914	443,786	210,276	105,510	*Dr 50,000*	150,805	nil
1915	210,818	261,994	*Dr179,176*	*Dr200,000*	nil	nil
1916	1,104,732	312,345	664,387	300,000	351,878	2½
1917	1,268,058	562,340	577,719	300,000	251,342	5
1918	1,271,559	573,606	569,953	310,000	251,342	5
1919 and 1920	3,040,392	1,567,432	1,216,961	350,000	603,221	10

A sum of £300,000 is transferred to reserve, and £50,000 is again set aside for the benefit of employees. The ordinary shares get 5 per cent. for 1918-19, and 10 per cent. for 1919-20, and £263,740 is added to the amount brought in, giving £336,781 to be carried forward. Changes in the balance-sheet are shown in the usual column.

Rubber Plantations Investment Trust.—The report and accounts of the Rubber Plantations Investment Trust, which has just been issued for the year ended March 31, 1920, shows that the company has recovered from its position of the previous year, and again enters the lists of dividend-paying concerns. In the table which we set out below, it will be seen that the total income from all sources amounts to £210,600, and after expenses of £35,678 have been deducted, there is a surplus of £174,922 in striking contrast to the debit of £114,075 shown for the year 1918-19:—

	1914-15.	1915-16.	1916-17.	1917-18.	1918-19.	1919-20.
	£	£	£	£	£	£
Dividends, int., &c.	28,237	57,302	46,550	44,299	29,652	58,384
Produce account	*Dr. 3,405*	15,139	74,526	31,820	*Dr.106,620*	152,216
	24,832	72,441	121,076	76,119	*Dr. 76,96*	210,600
Expenses and interest	23,179	24,487	8,734	15,344	37,107	35,678
	1,653	47,954	112,342	60,775	*Dr.114,075*	174,922
Brought forward	107,656	109,309	16,592*	56,600	117,375	3,300
	109,309	157,263	128,934	117,375	3,300	178,222
Dividend	..	32,754 (3 %)	63,361 (6 %)	..	..	62,782 (6 %)
Directors	..	3,276	8,448	nil	nil	..
Carried forward	109,309	121,233	57,125	117,375	3,300	106,471

* £121,233, less £104,641 transferred to reserve. † £57,125, less £525 in donations to war charities.

The amount carried forward, £106,471, is subject to Dutch East Indies war tax (if any). The report states that "During the year under review, the conditions ruling in the North-American tea market improved considerably, thereby enabling the Trust to dispose of its heavy stocks of teas there at prices much higher than those at which they had been valued at March 31, 1919. Consequently, the profit for this year includes a realised surplus of £32,364 over the 1919 valuation figure." The directors anticipate that the average net cost to the Trust of the acreage represented by its investments and properties at March 31, 1920, is not likely to exceed £63 per planted acre when in full bearing.

The London County Westminster and Parr's Bank announces an interesting scheme of foreign scholarships. To ensure a better understanding of overseas banking and foreign exchange amongst its employees scholarships of £100 per annum for one or two years, in addition to salary and allowance for travelling, are offered. There will be special "study leave" while serving abroad. Candidates must be of British birth, and must have passed the Bankers' Institute examinations. They must also be proficient in French or Spanish, and have knowledge of some other foreign language.

Oversea Correspondence.

UNITED STATES.—THE ANGLO-FRENCH LOAN—OTHER ISSUES—THE LABOUR SITUATION.

(FROM OUR CORRESPONDENT.)

NEW YORK, August 23.

AUGUST, ordinarily the dullest month of the year on account of the summer holidays, has been no exception this year, although, coupled with the usual diminution in volume and general inactivity, came a series of declines in bonds that verged on the precipitous, so far as foreign obligations were concerned. While the shrinkages were technically due largely to lack of support, there were, nevertheless, several factors that contributed considerable impetus to the slide. The Russian-Polish situation apparently started things going, while the inability of Japan to recover from her troubles as promptly as was hoped was also taken bearishly. Again, the foreign exchange market was such that it became extremely profitable for certain of the European markets to sell those securities payable in the United States at fixed rates, and bonds of this character therefore came over to New York in large volume, while conditions were far from propitious for their absorption.

The doubt existing as to how the French portion of the Anglo-French loan was to be handled has apparently been set at rest by the authorised statement from the Chamber of Deputies, issued during the week of August 14th. Unquestionably France's share will be paid off in cash. According to the recent figures something over $40,000,000 has been purchased by French interests and $100,000,000 provided by gold shipments and the purchase of exchange, leaving about $110,000,000 to be provided between now and October 15th. It is generally believed that a new loan will be arranged in favour of France, amounting to about $150,000,000, running for ten years, and to be retired by a heavy sinking fund sufficient to amortise the entire issue on or before maturity. According to reports, negotiations have been just about closed at a price that will enable the

underwriters to offer the bonds to the public in the neighbourhood of a 7¾ per cent. or 8 per cent. basis. This will compare with Swiss 8's, selling at 102, Belgian 6's and 6½'s on around an 8¼ per cent. basis, and Japanese 4's and 4½'s yielding from 9½ to 10 per cent. Undoubtedly the loan will be a success if it is not priced too high, for it has been a feature of the recent market that anything would go if the yield were large enough.

During the weeks of August 7th and 14th the regular quotas of British and French Treasury bills were issued on a 6 and 6½ per cent. basis respectively, and a new issue of United States Treasury Certificates aggregating $150,000,000 and maturing August 16, 1921, was made at par for 6's. Among the private issues the most conspicuous success was a $12,500,000 loan of the Union Tank Car Company, secured by 10-year 7 per cent. equipment notes and issued at 96½, yielding 7½ per cent. The loan was brought out by the Equitable Trust Company, and met a heavy over-subscription during the first day of offering, the bonds subsequently advancing to a substantial premium. Of a more local nature was the $5,000,000 issue of 10-year 8 per cent. convertible gold notes of the National Cloak and Suit Company and $3,500,000 Jersey City (N.J.) coupon water bonds, which were offered to the public at prices to yield from 5.85 to 5.25 per cent. according to maturity, a return marking a new high yield in this type of high-grade tax-free municipal obligations.

The labour situation has improved somewhat. Advances have been granted to the railroads sufficiently large to allow them to meet the wage increases without leaving much over for operation, while outside of the transportation problem there seems to be less of a desire among unions to strike for further increases, on account of the fact that so many industrial concerns have frankly admitted their inability to make both ends meet under present existing scales, and have therefore closed their plants entirely pending a readjustment of labour prices.

FRANCE.—AMERICAN LOAN—SUGAR SUPPLIES—COAL—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, September 7.

THE liquidation of the French half of the Anglo-French loan of $500,000,000, which becomes due for repayment to the United States Government next month, was satisfactorily arranged for during last week. Of the $250,000,000 due from this country, it has been arranged for part of the $150,000,000 to be covered by utilising French credits in the United States, and for the balance to be met by exporting gold. The first consignment of gold for this purpose left France last Saturday on board the "Lorraine." The repayment of the remaining $100,000,000 of the loan is to be made by the issue of a new loan, through American financial houses, on the New York market. According to information obtained yesterday from the Ministry of Finance here, this new loan will bear interest at the rate of 8 per cent. Its real cost to the French Government, all charges included, will work out at 9.42 per cent. To French eyes, which are now accustomed to gauging all investments on a basis of 5½ or at most 6 per cent., this rate appears high. It is pointed out, however, that, as a glance over an American list of quotations will show, first-class American securities are now estimated to produce yields ranging from 9 per cent. to 13 per cent., so that the interest to be paid on the new loan cannot be regarded as extravagant. The loan is redeemable by 1945 by means of a sinking fund, purchases being made in the open market annually during the first five years at prices not exceeding $110. Anglo-French bonds will be accepted in payment at $102½.

Except in the case of coal, rationing of all kinds has now ceased in France. Sugar and bread cards have recently been abolished, and the value of the coal card has since September 1st been increased, and allows the purchase of 25 kilos of coal per head per month (or 300 kilos per annum, which is exactly equivalent to the minimum rate of the German coal ration). With the abolition of sugar cards the trade in sugar has once more become entirely liberated from Government control, and the market left completely free. The question has arisen whether this will not result in prices being largely raised against the consumer. Expert opinion inclines to the belief that, on the contrary, in view of the excellent yield of sugar throughout the world, prices will fall considerably in the near future. At present France consumes 700,000 tons of sugar per annum. The current year's yield of French sugar is placed at 300,000 tons, or practically double that of last year. Another 100,000 tons may be expected to reach this country from the French colonies of Martinique, Guadaloupe, and Réunion, so that France will need only 300,000 tons from abroad. The world's beet sugar crop for 1920-21 is estimated by experts here at 3,945,000 tons, as compared with 2,818,444 tons for 1919-20, and is distributed as follows :—

	1919-1920. Tons.		1920-1921 Tons.
Germany	750,000	....	1,300,000
Czecho-Slovakia, Hungary, Austria	600,000	....	800,000
France	154,444	....	300,000
Belgium	125,000	....	200,000
Holland	140,000	....	300,000
Russia	350,000	....	350,000
Sweden	150,000	....	160,000
Denmark	160,000	....	165,000
Italy	150,000	....	170,000
Spain	120,000	....	180,000
Switzerland	4,000	....	5,000
Bulgaria	15,000	....	15,000
	2,818,444	....	3,945,000

The yield of cane sugar this year is expected to be equally important, and Cuba alone, the greatest producer of this kind of sugar, is expected to furnish no less than 3,900,000 tons. A large proportion of the foreign sugar imported to this country comes from Holland, Belgium, and Bohemia, but it is expected that France will draw large supplies in the immediate future from the United States. The recent fall of as much as 50 per cent. in American prices for forward deliveries will undoubtedly foster this probability.

The coal outlook has undoubtedly immensely improved during the past week or ten days, and, in view of the steadily growing body of opinion here in favour of taking the drastic step of occupying the Ruhr coalfields, as a means of compelling Germany to disarm and carry out the other clauses of the Peace Treaty, there is every reason to believe that this tendency will grow in strength. During August France received the following quantities of coal :—

	Tons.
Output of French mines	1,650,000
Imported from Great Britain	800,000
„ „ United States	280,000
„ „ Belgium	80,000
Delivered by Germany under Treaty of Versailles at least	1,550,000
	4,360,000

The amount of coal to be delivered to France by Germany, as fixed by the Spa Conference, is 1,550,000 tons, it will be remembered. There is reason to believe that, in notable contrast with the small quantities delivered in previous months, Germany in August sent into France appreciably more than the stipulated quantity. According to official returns, the quantity received during the first 28 days of the month was 1,537,000 tons, and this was increased to over 1,600,000 tons by additional quantities sent in during the last three days. Reports received here from Germany are to the effect that the deliveries of the 2,000,000 tons due to the Entente Powers are (including the 1,550,000 tons due to France) assured for September, but it is anticipated the German Government will make use of the excuse of troubles in Silesia to account for non-fulfilment of the coal clauses for October. The French railways now have a reserve stock of 800,000 tons of coal, which is their normal pre-war reserve, to meet their daily consumption of 30,000 tons. Paris itself received 205,000 tons during August, including 67,000 tons from German sources, and has now a stock of 120,000 tons. Contracts for the delivery of from 250,000 to 300,000 tons have been signed between the city authorities and American coal firms for delivery between now and January.

Meanwhile, the work of restoring the coal mines in the Pas de Calais that were wrecked by the enemy is progressing rapidly. The first pit at Lens has already been brought back to producing conditions, and this week the

first actual delivery of coal was obtained from it. In this pit the cement casing of the mine has been reconstructed, and cutting has been started in two new coal seams, each about a foot in thickness, found at the 155-metre level. The underground workings of the mine have not yet been cleared and restored, but it is hoped that before long an output of from 30 to 40 tons a day may be secured from the new seams. The cementing of three other pits has also been completed, and the work of pumping out the mines is well under way, while the casing of four others is approaching completion. It is expected that some four years must elapse, however, before the Lens pits are able to resume their pre-war output.

The Bourse this week opened firm, but towards the latter part of it there was a very marked heaviness, buyers being conspicuous by their absence. Unquestionably such storm centres in Europe as exist in Russia, Poland, Ireland, England and Italy have made purchasers shy and uneasy, and they have shown a marked preference for securities rather far abroad, in markets sheltered from the social and political difficulties of Europe. Petrol and sugar securities were in marked favour. The French 3 per Cents have dropped back from 55.95 to 55.65, but there has been no real change in the various war loans. Banks have also dropped; Banque de Paris, which a week ago was at 1,699, after rising to 1,730, fell back to 1,708, and Union Parisienne to 1,260 from 1,273. Shipping shares were irregular, Messageries standing at 432, as compared with 441, and Chargeurs at 1,310, as against 1,350; a week ago they were at 1,290. Metallurgical undertakings have to some extent improved, Chatillon-Commentry being at 2,750, as against 2,600, and Pontgibaud at 1,250, as against 1,200. The improvement, however, has not been universal. In the Copper market the most interesting event has been the fall of Rio from 1,796 to 1,675, while Boleos stand unchanged at 902. Among Oils, Royal Dutch is at 39,650, as against 35,700, and American Eagles, after reaching 606, dropped to 590, as against 581.

The returns of the Bank of France for last week, the previous week, and the corresponding week of 1913 are as follows :—

GERMANY.—FOREIGN POLITICS—FINANCES—EXCHANGE AND BOURSE—PRICE MOVEMENT—INDUSTRY.

(FROM OUR CORRESPONDENT.)

BERLIN, September 2.

THE Foreign Minister, Dr Simons, again this week made a very emphatic pronouncement in favour of neutrality in the Russo-Polish conflict. The pronouncement was a reply to French reports of imaginary Russo-German treaties against Poland or against France. No such treaties were at any time likely to be made unless Bolshevik military strength proved very much stronger than it did even when the Red Army seemed about to take Warsaw. The Bolshevik defeats have cooled German pro-Russian sentiment, and the extreme Left here has been much discomfited by stories from skilled German workmen who lately settled in Central Russia in hope of bettering their lot. These emigrants complain of starvation, and of generally impossible living conditions, and they now desire to return home.

The Reichsbank report for the third week of August shows an increase of the note circulation to 56,653,200,000 marks. The total of "Kassenscheine" in circulation was 13,081,700,000 marks, and the total paper circulation 69,734,900,000 marks. The discussion in Committee of the Prussian Budget for the financial year 1920-21 shows a serious condition, which even the taking over of the whole State Debt by the Republic in exchange for the railways will not cure unless also current expenditure and revenue are brought into harmony. Before the war the Debt was 10.6 milliard marks, which was more than counterbalanced by State Railways worth 12.5 milliard marks, in addition to which were State mines, domains, forests, and a large margin, which no longer exists, of national taxable capacity. To-day the Debt is 25 milliards. The Budget as first drawn up last autumn balanced at 5.6 milliards, but as results of salaries increases, increases of other departmental expenditure, and of 600,000 marks loss caused by the disorders connected with the Kapp coup, the Budget will total at least 2 milliards more. Certain further proposed alterations in the salaries Bill now before the Diet may raise this excess to between three and four milliards. If the deficit has to be met out of capital, the whole 29 milliards due by the Republic for the railways will be swallowed up. Prospects are not improved by the fact that Prussian municipal finances are in a still worse state, and have no assets comparable to the State railways to set against their growing debts.

For the Federal Finances a Forced Loan Bill is this week unofficially announced. Details are not yet known. The present Finance Minister on assuming office foreshadowed this expedient, but postponed it owing to opposition of business men, who affirmed that a Forced Loan could not be raised in the year of first payments of the Emergency Levy (*Reichsnotopfer*), not to mention the Tax on Increase of Wealth in 1913-1919, which has not yet been collected, and which confiscates 100 per cent. of all newly-acquired wealth that exceeds a very modest sum. An export duty on potash, to bring in 250,000,000 marks, is also proposed. The aim is to get for the State some of the large profits gained by the potash exporting companies out of the high exchanges of the more important buying countries.

Stocks this week continued to be firm, despite, on the whole, stable foreign exchanges. There are indications that the Bourse is to some extent freeing itself from dependence upon the exchanges. One symptom—a novelty in Bourse affairs since the new year, is firmness of particular foreign stocks on days when the exchanges are weakish; also movements of important single stocks against the general current of the market. The strength of stocks is apparently due to the expectation that the coming October settlements will result in increased inflation, always a bull influence. Last Monday the Bourse opened extremely firm, with a very large increase of buying orders by the general public, and rises in speculative papers, and to-day's Bourse showed a big demand for oil stocks, chiefly Deutsche Petroleum and Steaua Romana, for Colonial stocks, and for Bochum, Buderus, Phœnix, and Gelsenkirchner mining and iron stocks. The capital market for August shows somewhat increased activity. The estimated total of industrial stocks and bonds is 674,000,000 marks, as against 606,000,000 marks in July; but the August figure is still far below the average of the second quarter of the year, which was 923,000,000 marks a month.

Business continues to show slight signs of improvement as far as the selling market goes. Manufacturers and wholesalers report increased ability to get rid of old stocks, and the fallen mark exchange is tending to attract foreign buyers. But fear of a new set-back, combined with increasing shortage of coal (several blast furnaces have ceased output, and many coalless factories announce further shortening of hours), have prevented increase of production, and unemployment is growing. Berlin Municipality has had to vote 90,000,000 marks for emergency works. Foreign "manufacturing credits," by supplying raw material which remains the credit-giver's property until it is returned as manufactured goods, have fallen off of late. Chambers of Commerce announce that the experiment has not been a success. In practice the credit-givers usually found that finished goods made out of their own material could not easily be sold; and also that they, as specialists in materials, were not the right parties to sell them.

From Hamburg, where this system originated, is now announced a reformed method. The foreign credit-giver undertakes to accept in exchange finished goods of any kind that are saleable to the full amount of the credit. Thus Dutch firms have been supplying vegetable oils, the finished products from which find a good sale in Germany itself, while the importing manufacturer with the proceeds buys, and pays the credit given with, dyes, chemicals, and other goods, of which Germany has too much and the rest of the world not enough. This change in methods has the result that it is usually no longer the German manufacturer who concludes the deal, but a mercantile firm which can handle miscellaneous goods. The system is a reversion to ordinary trade methods, with the difference that the value of imported goods is secured not with bills, but with commodities.

Prices on the whole are stable, and do not yet reflect the full extent of the mark exchange's decline since late May. Cotton, having risen from a minimum in the last two months of 40 marks a kilogram to 51 marks, fell back by August 28th to 46½m. This is partly in connection with the sharp fall of cotton in America, partly with the fact that Germany is now overstocked with raw cotton, and that the spinning and weaving industries are partly idle. Bremen port is full of cotton, and Americans are trying to sell for future settlement, and are showing unaccustomed liberality in their payment conditions. English dealers in Egyptian cotton are now sharply competing with Americans, and are also offering easy payment terms. The prices of cotton yarn rose from 60-77m a kilo on July 30th to 72-87m on August 28th; and of cotton cloths from 9⅛-12m to 1¼-13¾m a metre. The prices of raw silk and silk cloths have been practically stationary in the last fortnight. Most chemicals, but not all, rose during August. The prices of native and imported foods hardly changed. The heavy drop in boot and shoe prices which followed the extravagant rise of the spring seems to have come to an end. The cause of the drop was the panic collapse of hide and leather prices, but though these prices have sharply recovered, boot and shoe prices are still around their lowest. Boots which cost 290-320m to produce in April now cost 150-180m.

Discharges of workmen have compelled several State Governments and municipalities to give public orders. The Saxon Government has announced that it will help textile industries in this way. Both in the wool and cotton branches big cartels are about to be organised with the object of introducing uniform payment and delivery conditions, and thus, it is hoped, facilitating sale. The wool markets which were tried in Germany last year are about to be abolished, and sale by auction reverted to. The china and earthenware industries are finding great difficulty in selling, as they persist in refusing to follow other manufacturers in cutting prices, and declare that for all visible time a price-cut will be impossible. In the chemical industry there is renewed buying, and a great demand in particular for metal salts and lead combinations; also for tar products, in particular for tar fuel oil. A new big combine in the chemical branch is under way, and a struggle has begun to buy up shares in several undertakings which have lately purchased brown coal mines with the aim of increasing their command of coal tar. The Upper Silesian chemical industry, which is closely associated with mining and metallurgy, reports new difficulties as the result of shortage of coal caused by the Spa agreement. The important machine tool industry of Remscheid in Rhineland reports that it has entirely lost such foreign markets as were recovered after the war, this as a result of cheaper American production; and a similar report is issued as to the prospects of German automobiles in Central and South America. A comparative list puts prices of American products in this branch at present exchange usually little more than half Germany's prices. The sugar industry in the coming manufacturing year will show improvement. The total output, if all sugar beet is turned to use (which depends upon the coal supply) will be 22,000,000 double-centners, as against 18,000,000 d.c. in the year ending August 31st. The output in the years immediately preceding the war was 52-54,000,000 d.c.

POLAND.—THE INCREASE OF INFLATION—WAR AND PEACE—WAR INDUSTRY—RESTRICTION OF PAYMENTS BY THE BANKS—GOVERNMENT CONTROL OF FOREIGN EXCHANGES.

(FROM OUR CORRESPONDENT.)

WARSAW, September 1.

WHEN the Germans left Poland in November, 1918, there were 880 million Polish marks in circulation. In the beginning their amount increased slowly, and at the end of June, 1919, it did not reach 2 milliards (1,776 millions). In the second half of 1919 the inflation greatly increased, and at the end of December 5 milliards were in circulation. In 1920 the speed of the printing press has been much intensified, and according to the last report of the Polish National Bank for July 31st the paper circulation amounts to about 26 milliards. In the same proportion the sums advanced by this bank to the Polish Government have increased. The debt amounted on April 1, 1920, to 14.17 milliards, on July 1st to 27.6 milliards, and on July 31st to 33 milliards.

People realise more and more the danger of such a situation, and there is a general desire for peace, which would enable the country to consolidate its National independence. The strongest pressure in this direction is exercised by the Socialist party, which is of the opinion that once Poland has been freed of the Russian invasion a conclusion of peace is the principal duty of the Government.

Trade and industry are very much depressed at this moment. The whole life has been adapted to the needs of the war, and factories, as far as they are occupied, are working for the army. In the last few weeks Poland had made great efforts to create a war industry of its own, and a special military Economic Commission has been formed for this purpose in Warsaw. Actually great quantities of bayonets, sabres, hospital beds, &c., are produced in the country, and 18 factories are occupied with the reparation of motor cars.

When the country was menaced by the Russian invasion people began to hoard money, and the Government was obliged to protect the banks against the run by proclaiming a moratorium, which is in force since August 1st. The banks are obliged to make without restriction payments up to the amount of 25,000 marks. Above this sum they are allowed to pay no more than 10 per cent. monthly of the deposits as far as the money is not necessary for payment of taxes, wages, or for industrial expenses.

The great rise of foreign exchanges mentioned in my last letter (*Economist,* August 21st) has decided the Government to reintroduce a Board of Exchange for the control of dealings in foreign bills. This is the second attempt that the Government is making in this direction. Mr Bolinski, the former Finance Minister, appointed a Board of Exchange which proved to be a complete failure. Private trade could not get any foreign bills from this institution, and was obliged to resort to the illicit private market called "black exchange." Finally, the Ministry of Finance gave way, and the Board of Exchange was abolished, and the rates of exchange were entirely governed by market fluctuations. Whether the new Board of Exchange will work more successfully is not clear. Already, after it has been only two weeks in operation, representatives of trade complain that they are obliged to resort, as in former days, to the "black exchange."

According to the new decree of the Minister of Finance, only special institutions which are authorised by the Ministry have the right to buy and sell foreign bills. The representatives of these banks form the Board of Exchange, and are regulating foreign exchanges. Without the permission of this board, the export of foreign bills and of foreign currency is prohibited. Equally the export of all shares and bonds without a licence of the Ministry of Finance is forbidden. Only roubles and unstamped kronen are left to the free market.

The latest quotations of the foreign exchanges are as follows:—Russian roubles, £235,317.50; Kerensky roubles, 71-73. There has been a marked decline in the Russian exchanges which at the moment, when I last wrote, stood at 335 to 385 and 88 respectively. French francs are quoted 16 to 16.50; Swiss francs 37 to 38, English pounds 820 to 840, American dollars 212 to 218, German marks 470 to 482, Austrian kronen 96 to 99.

SWEDEN. — INCREASED DEPRESSION — FOREIGN TRADE — DEMAND FOR BRITISH COAL — EXCHANGES.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, September 2.

THE depression in trade and finance has been more accentuated here of late, and many private undertakings are in difficulties. The position of the State bank, according to the last survey of August 28th, has also deteriorated further, the circulation of notes having increased by 11 million kr. As some improvement is usually looked for after the holiday season, which is now at an end, the development of things for the worse in this way is giving cause for great anxiety. On the Stock Exchange the turnover during August established a fresh bottom record, and all kinds of stock have lost heavily. Exports and imports continue to be satisfactory, although for July a slight falling off is noticed in almost all the principal export articles as compared with June. The strongest improvement is shown in cement, which has been shipped in 100 per cent. larger quantities than in June. Some relief is felt at the satisfactory supply of coals and coke, 347,000 tons having passed into the country, as against only 230,000 during June. During the first seven months of this year over 1½ million tons of coal and coke have been imported, as against only slightly over 1 million tons for 1919; and as considerable quantities of coal have arrived during August from America an import quantity of two million tons was probably reached at the end of August. This probably puts Sweden on the safe side for some months ahead, until a settlement of shipments from Great Britain has been arrived at. Not only the Swedish railways and industry would greet such an event with satisfaction, as the quality of English and Scotch coal is very much in favour with them, but also Swedish shipowners have a material interest in a regular traffic with the United Kingdom being established. Timber and paper exporters complain of slackness in their trades. The movements in exchange rates have not been very accentuated. Only dollars (4.99), Swiss francs (81.60), and Dutch florins (1.59) are maintaining their position above par. During last week Scandinavian economists, practical as well as scientific experts, met here to discuss State finance, housing, and exchange questions. No resolutions were carried, but in order to do away with the irritating price-index clause in commercial contracts, one of the speakers suggested the fixture of exchange rates for one month at a time. The raising of import duties on coffee and tobacco to increase State incomes was also advocated.

Letters to the Editor.

THE QUESTION OF CREDIT.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Mr Wallis, in his letter published in your issue of August 7th, makes clear the fundamental difference between us. He looks at the problem from the point of view of the consumer, and I from that of the producer. But I would ask, Who is the consumer who is not a producer? I submit only the idle poor and the idle rich. All else are producer-consumers, and to them their producing capacity is all-important. A stateman's first care, therefore, should be to see that producers are fully employed at good wages and under good conditions. In my opinion the orthodox economic axiom that cheapness is in the interest of the poorest of the poor is a fundamental error. It would be much nearer the truth to say that cheapness is in the interest of the richest of the rich, whose pound would then command the maximum of goods and services from the producer.

Currency in the shape of gold or notes is only required for wages and small retail transactions. All else is settled by cheques, bills of exchange, &c.

In pre-war days our currency was gold, and when trade became brisk, and wages consequently increased, manufacturers naturally required larger amounts in gold for the payment of their wages. If the good trade continued for a sufficiently long period a drain on the banks for gold was caused, and consequently the gold reserve became depleted. This necessitated the raising of the Bank rate in order to protect the reserve, thus immediately causing a restriction of credit facilities, the stopping of expenditure on capital goods, with consequent unemployment. This unemployment brought about a lessened demand for commodities (*vide* Currency Committee's report) which still further increased the unemployment and short time, and thus a vicious circle was created, which finally brought about low prices with no profits, and wages at the subsistence level. During the war, when unrestricted currency notes took the place of gold, there was no such automatic check on trade or wages, and the Bank rate was steady at 5 per cent. Unfortunately, however, the unrestricted issue of currency notes brings with it other evils. When there is a shortage of goods speculation becomes rampant, and prices tend to be forced up out of all proportion to their cost. The Government, in order to check this speculation, a few months back decided to put a legal maximum to the issue of currency notes, thus producing precisely the same effect as when in pre-war days trade was brisk and our currency gold. The demand for currency is now greater than the supply, and consequently we have dear money with a 7 per cent. Bank rate, restriction of credit, and consequent unemployment. In a recent issue of the *Times,* in an article on "The Financial Outlook," the writer, arguing that there is no restriction of credit on the part of the Bank (how he can say this with a 7 per cent. Bank rate passes my comprehension), writes:—

"Some business people seem to imagine that a banker can put his hand in his wastepaper basket and pull out as much credit as his customers require. Only the Government which has unlimited powers to create currency can do that. A banker certainly cannot. His credit operations are governed by certain banking principles established as a result of years of accumulated experience. In the first place, a banker must maintain a certain proportion of his liabilities in cash, and if he allows that proportion to fall below the safety line he runs the risk of having to suspend payment through lack of legal tender currency."

That is my case in a nutshell. The Government, by restricting the issue of legal tender currency, have deprived the banks of the power to make the advances to industry which are required for the increased production of goods for which the world is hungry. If industry is supplied with all the money that it reasonably requires there will be such improvements in the methods of production that prices will naturally fall—*e.g.*, the Ford car. If, on the other hand, through lack of the wherewithal men are to be thrown out of work, of what avail will it be to preach increased production? Do they not say to-day, "We have produced in the past, and the result has been that your granaries and your warehouses have been filled to overflowing with goods for which there were no purchasers. We have then been put on short time, or discharged altogether, advantage of the situation has been taken, and our wages have been reduced. That being the case, it is idle to talk to us of increased production; we intend to limit output." A suicidal policy, truly, but quite understandable from their point of view, and their experiences of the past. The cause of these troubles has been the restriction of credit imposed by Peel's Bank Charter Act, which, while it has the merit of checking speculation and keeping prices low, must also bear the responsibility, after seventy years' trial, of leaving, according to Sir Henry Campbell-Bannerman, ten millions of our fellow-countrymen on the border-line of starvation. That is the legacy the gospel of cheapness left us. To those who complain of high prices, I would ask, Where are those ten millions to-day? or perhaps I should say, Where were they before the restriction of the currency notes? The truth is that we swing from one extreme to the other. What is wanted is a middle course, and that is why Sir Edward Holden's suggestion that the cover for currency notes should be gold, plus bills of exchange, appeals to me as indicated in my original letter.—Yours truly,

September 6th, 1920. T. B. JOHNSTONE.

INDIAN CURRENCY POLICY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The letter from your Bombay correspondent, Mr B. F. Madon, published in your issue of August 28th, states that the Government of India will debase the Indian currency by their proposed change of the legal ratio from the sovereign = 15 Rupees to 1 sov. = 10 Rupees.

This may be incorrect. The rupee itself will still remain legal tender for a debt in India to any amount, and if 113 grains of gold can be sold out of India for more than 10 Rupees will purchase, the gold in India will be used, not for internal, but foreign payments.

It is not likely that the proposed prescribing of a new ratio will have any effect at all, beyond, perhaps, inducing holders of gold to sell it at less than it is really worth, and this depreciation of gold can, in any case, only be temporary, as it will soon find its true value in the world's markets.

Mr Madon may be right in thinking that the Government of India is "debasing" the currency, but is it not probable that this may be more correctly ascribed to the large issue of notes against its own securities? The Indian Currency return of August 22nd shows that Rs 47 crores of notes are issued against Indian Government securities, whereas Rs. 20 crores was the limit recommended by the Currency Committee.—Yours faithfully, F. W. S.

The Rectory, Throwleigh, Okehampton, Devon,

Books and Publications.

DISRAELI.

"The Life of Benjamin Disraeli, Earl of Beaconsfield." By George Earle Buckle. Volume V., 1868-76; Volume VI., 1876-1881.

WITH these two volumes the great biography of the real creator of modern Conservatism comes to a worthy close. The secret of the fascination which Disraeli exercised is perhaps best summed up in his own words, which he addressed to the Queen in 1878: "During a somewhat romantic and imaginative life nothing has ever occurred to him so interesting as this confidential correspondence with one so exalted and so inspiring." It is the Romantic as Politician that really attracts, though this is not to be construed into a denial of Disraeli's services as a statesman. He was the real founder of Tory Democracy, and, incidentally, of "Social Reform"; and he created that mystical worship of the Majesty of Empire, which was so alien to the crudeness of the Benthamite calculus of profit and loss from the colonial connection, and yet was so easily applied to base uses by unscrupulous adventurers. Mr Buckle's great discovery is, of course, the correspondence with the two sisters, Lady Bradford and Lady Chesterfield, a discovery which throws a clear and profoundly interesting light upon Disraeli the man. In his affections, as in his novels, he was a man of inexhaustible exuberance, which made him and them extraordinarily entertaining. It may be that he will survive as a novelist long after he is forgotten as a statesman.

A SOCIALIST CONSTITUTION.

"A Constitution for the Socialist Commonwealth of Great Britain." By Sidney and Beatrice Webb. Longmans Green. 12s 6d net.

PERHAPS it is a little premature to think out a constitution for a Socialist Commonwealth of Great Britain, which seems most unlikely to be established in our time, if ever. But if it had to be done, Mr and Mrs Webb are admirably qualified for the task. The main feature of their scheme is the duplication of Parliament and of the Executive. There is to be a Political Parliament and a Social Parliament, each with its own Executive. If, as seems very likely, the two bodies disagree, they will settle their differences, or try to, in a Joint Session. Under such a system, it would seem probable that the power of the two Parliaments would be to a great extent mutually destructive, and this poor old country would become more than ever a happy hunting ground for bureaucrats, ruled by two sets of officials, who will determine among a host of other things "what kind of conduct, what forms of social behaviour shall be prescribed, or required, with a view to maximising individual freedom." To "maximise" freedom by prescriptions and requirements seems to be a promising enterprise. But even to those who shudder at the sort of life that we should live under their Commonwealth, Mr and Mrs Webb's book will be found full of interesting thought and suggestion, and the industry with which the whole scheme has been thought out is astonishing.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
September 14.	September 15.

Stock Exchange markets have enjoyed a week of considerable expansion in business. This has been marked more particularly in gilt-edged issues and in oil shares, but at the same time demand has arisen for various other securities, embracing a fair number of industrial shares. The outlook as regards the coal strike is deemed reasonably hopeful, and anticipation looks for the trouble to prove a possible blessing in disguise if its incidence should have the effect of increasing production of coal, even though it involve addition to the miners' wages.

The underwriting of a loan of £5,000,000 by five Southern towns had no unfavourable effect upon the Consol market, where prices have held their ground well. Advances occurred in the 5 per cent. and 4 per cent. War Loan, and in several National War Bond issues. Colonials are quiet; there is vague talk of a possible new loan from one of the colonies in the near future. The feature amongst Government stocks, however, is the strength shown by Mexican bonds, the prices of which went ahead sharply owing to the election of General Obregon to the presidency, and the better news received as to the likelihood of a settlement in the country. Several Chinese bonds are better. Japanese advanced in company with most of the dollar securities connected with New York. South Americans are fairly steady. German Threes languish about $7\frac{1}{8}$, and French bonds are somewhat unsteady in view of the exchange.

The Home Railway market has scarcely altered at all. Indeed, it may be said that the miners' strike negotiations have left prices unchanged. Grand Trunk junior stocks weakened. The announcement that rates on Canadian railways are to be advanced has come too late to help prices. Mexican Railway stocks improved substantially. United of Havana went up on a demand which found the market short of stock. Argentines are somewhat disappointing, lacking a lead. Leopoldinas showed strength, which was, however, chastened by a slight relapse in the Rio exchange. Indian Railways are flat, the political outlook bringing in sellers.

Rubber shares continue on the down grade, in company with the price of the raw produce. Rubber has fallen to the lowest price touched for years past, and the reason for this weakness is difficult to track. The Rubber Plantations Investment Trust announces a dividend of 6 per cent., the first paid since November, 1917, and this came as a pleasant surprise to the market, especially as a new issue of shares is to be made at par, involving a bonus. Rubber Trusts consequently rallied. Oil shares commanded most of the attention, and have been an active and buoyant market throughout the week. Occasional reactions found ready support, and the higher-priced shares have regained a marked measure of public favour, owing partly to the advertisement afforded the industry by the crisis provoked by the coalminers. Speculation is also animated amongst the lower-priced shares. The strength of oils has not entirely detracted from renewed favour extended to tobacco shares on talk of a rise in the price of the weed; to textiles, for which Manchester is again showing partiality, and to gas stocks, where prices have risen materially on the passing through Parliament of the South Metropolitan company's Bill, freeing it from the operation of the sliding scale as applied to dividends. The iron and steel market is steady, Egyptians a little better, banking shares firm, and the insurance market inclined to lift up its head after the long-continued depression which followed the boom earlier this year. The shipping market is undecided, wavering between the difficulties surrounding the drop in freights, and the hope of an increased production of coal benefiting the shipping industry. Cement and constructional shares have received more attention from buyers than of late, and other sections of the industrial market present a better front by reason of the return of the public from their holidays to the markets.

While the price of gold keeps good, and the August returns from the Transvaal mines are better than expected, the public decline to pay any heed to the Kaffir market, and consequently prices, after being good, failed to hold the advance established through the medium of professional support. Paris is still something of a thorn in the side of the market, and the Cape maintains its attitude of inactivity. A few of the lower-priced Rhodesians advanced, owing to a somewhat unexpected dividend declaration from the Globe and Phœnix Company. Diamonds moved somewhat aimlessly. Mexican mining shares derived sympathetic firmness from the strength shown by Mexican issues as a whole. The Broken Hill group has been better, without maintaining its full advance, but tin shares are neglected, owing to a fall in the price of the metal. Three or four of the Indian mining shares gained the market turn. Business in Burma Corporations has died away for the moment. Indeed, it may be said that the mining markets as a whole have not participated in the increased amount of business attracted to the Stock Exchange during the past week. The shares of the House itself are still dull at 110, and the price of Nominations varies between £50 and £100.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

5-15 Year Treasury Bonds, repayable at par on May 1, 1935, bearing interest at a minimum rate of £5 per cent. per annum, payable half-yearly on May 1st and November 1st. Price of issue fixed by H.M. Treasury at £100 per cent., payable on application. These are still on offer. For full particulars see *Economist* of May 1, 1920, pages 899 and 915.

London Housing Bonds.—Registered bonds for £5 each or multiples thereof are obtainable for terms of 5, 10, or 15 years, at applicant's choice. Six per cent. interest and full repayment when due are guaranteed by the London County Council on the security of London's rates. Interest payable each September 30th and March 31st. The money will be applied solely for the purpose of housing schemes approved by the Government, and in particular to finance the housing schemes of the Metropolitan Borough Councils. We referred to these bonds in a leader in the *Economist* on June 12th, page 1282.

Catlin's Scarborough Entertainments, Limited.—Authorised capital £120,000, divided into shares of £1 each. Applications are invited for 120,000 shares at par. The company has been formed to acquire the issued share capital of Catlin's Arcadia (Scarborough), Limited. The assets of this company consist of two moving picture houses, restaurants, &c. The purchase price has been fixed at £82,000. It is stated in the prospectus that profits for one year, the year ended March 31st last, before charging depreciation, excess profits duty, income-tax, &c., were £11,000. The assets are independently valued at £100,480. Apparently the promoters paid £67,000 for the undertaking, and are reselling at £15,000 profit to the new company. This profit,

however, is taken in shares. In addition to this, the issue is underwritten at 5 per cent. by interested parties to the extent of 100,000 shares. As it is estimated that flotation expenses payable by the company will take £8,000, the company begins its career with fairly heavy promotion costs. The directors are mostly men experienced in this line of business, and it may be that substantial profits will be earned. The business of seaside entertainments, however, is fraught with far too much speculation for the ordinary investor to take a share in this issue.

Eow Seng Rubber Company, Limited.—Authorised capital £100,000, divided into 100,000 shares of £1 each. Capital already issued amounts to £34,500. This is an issue of 57,500 shares of £1 each, at a premium of 7s 6d per share. The company was formed in 1909 to acquire the Eow Seng Estate, comprising 652½ acres, situated in the Krian District of Perak, Federated Malay States. The proceeds of the present issue will be devoted towards the purchase of the estate known as Paya Besar, situated in the Province of Kedah, about 12 miles from Penang. The purchase price of the Paya Besar estate is £53,850. It has been valued at £66,275. The new property comprises in all 876 acres, of which 726 acres have been planted with rubber, and the output for 1921 is estimated at 58,800 lbs. Bonus shares amounting to £11,500 have recently been distributed to shareholders. The company has had a prosperous career, and in view of this, the premium asked on the present issue is not unreasonable.

Newark Cinemas, Limited.—Authorised capital £55,000' in shares of £1 each, the whole amount being now issued at par. The object of the company is to take over two picture palaces at Newark-on-Trent. The purchase price for the two theatres has been fixed at £52,000, payable in shares or cash at the company's option. An independent valuation of £70,000 is submitted. Past profits are not shown. The statement of estimated profits is somewhat vague, as a surplus is shown subject to depreciation, renewals, secretary's salary, &c. On paper the proposition appears to be a reasonable flotation with these exceptions. However, the shares should only be considered by those with a knowledge either of the directors or local conditions.

Fine Chemicals, Limited.—Authorised capital £40,000, divided into 10,000 7 per cent. cumulative preference shares and 30,000 ordinary shares, of which 3,450 preference and 11,600 ordinary shares have been issued. This is an issue of 6,550 preference shares, and 18,400 ordinary shares at par. The company was incorporated on September 26, 1919, with a capital of £25,000, as a private company, to acquire the wholesale chemical business carried on by the Apothecaries' Hall of Ireland. It was converted into a public company in April, 1920. Assets are valued at £27,225, exclusive of goodwill. The leasehold premises are independently valued at £9,250. The head office of the company is at Dublin, and the concern is a purely Irish undertaking. It is stated that the board of directors "comprises men well known in the scientific, industrial, and commercial life of Ireland." It is probable that the company will be well supported for this reason, but regarded in the cold light of an investment, it is a speculation.

ACTIVE SECURITIES.

OIL OUTPUTS.

COMMONWEALTH OIL CORPORATION, LIMITED.—Cable from Australia reports for period four weeks ended July 15th:—Shale retorted, 1,963 tons; crude and naphtha oil produced, 133,765 gallons.

KERN RIVER OILFIELDS OF CALIFORNIA, LIMITED.—Total production during August amounted to 138,613 barrels, or approximately 19,802 tons, including 87,068 barrels from the properties of the St Helens Petroleum Company, Limited.

TRINIDAD LEASEHOLDS, LIMITED.—Oil produced during August, 14,450 tons.

COMPANY MEETINGS, &c.

BANK OF NEW ZEALAND.

CHAIRMAN'S INTERESTING REVIEW OF WORLD'S FINANCIAL AND ECONOMIC POSITION.

GRATIFYING RESULTS OF THE YEAR'S BUSINESS.

INCREASED PROFITS AND DIVIDEND.

The ordinary general meeting of the proprietors of the Bank of New Zealand was held, on Friday, June 18th, last, at the head office, Wellington. Mr H. Beauchamp (chairman of directors) presided.

With the consent of the meeting, the report of the directors and the balance-sheet were taken as read.

CAPITAL AND RESERVES.

The Chairman, in moving their adoption, said: Copies of the report and balance-sheet are in your hands, and I will now remark upon the various items where fluctuations in the figures seem to call for any comment from me.

CAPITAL.—£2,627,441. Increase, £347,453. This increase represents the amount paid up by shareholders in advance of due date in respect of the call made on January 9th last on the ordinary shares Nos. 1 to 150,000, inclusive, the circumstances and conditions of which were mentioned at our meeting on December 12th last. It will be seen that a large number of shareholders availed themselves of the option allowed them of paying up the amount of the call before the due date (April 1st) under rebate at 5 per cent. per annum, the whole call, with the exception of £152,546 13s 4d, having been received at the balance date. I may mention that of that amount only £44,261 remained unpaid at 2nd instant. Our issued ordinary capital is now £1,500,000, and the amount paid up in respect thereof at 2nd instant was £1,455,739.

RESERVE FUND.—£2,350,000. Increase, £150,000. This increase is the amount added to the reserve from the profits of the year ended March 31, 1919. As will be seen by the report in your hands, we now propose to increase the reserve fund by another £150,000, making the total £2,500,000.

NOTES IN CIRCULATION.

NOTES IN CIRCULATION.—£5,765,337. Increase, £2,037,088. The greater part of this increase is represented by notes not "circulating" at all in the sense of being in the hands of the public. They are notes of ours in the hands of other New Zealand banks, paid to them in settlement of exchanges. During the period of the commandeer the transfers of Government moneys in payment of produce have passed through us as the Government's bankers, and large amounts have, as a consequence, occasionally to be paid over in settlement. Adjustments are made with other banks at short intervals by paying in London in redemption of notes issued to other banks in the Dominion. Sometimes, particularly when a local War Loan has been raised, the balance has been turned in *our* favour, and we have been holders of other bank settlement notes, but at present the balance is against us, hence the large increase shown.

INFLATION.

I mention the matter in order to guard against any misapprehension arising in regard to undue inflation of the New Zealand currency. I do not think there has been any such inflation here. Such increase as has taken place since 1914 in the volume of notes actually in circulation is, I think, due principally to the fact that gold which people used to carry about or keep by them has found its way into the banks, and has been replaced by bank notes. I would point out that the gold actually held by the banks in New Zealand is sufficient to cover all such notes actually in circulation. The New Zealand note currency, therefore, is on an unexceptionable basis, being fully represented by gold on hand; and while it may at present be slightly redundant, it cannot, while that position continues, be regarded as inflated. Magnitude does not necessarily imply inflation.

DEPOSITS, BILLS PAYABLE, TAX RESERVE, ETC.

DEPOSITS.—£37,661,610. Increase, £5,945,258. This increase reflects the prosperous condition of the country, and will be more fully dealt with at a later stage of my remarks.

BILLS PAYABLE AND OTHER LIABILITIES.—£3,708,306. Increase, £847,915. An ordinary fluctuation which calls for no special remark.

RESERVE FOR TAXES.—£340,000. A new item in the balance-sheet, although not entirely a new provision, since in view of the very heavy liability to which the bank is subject for taxation, it had been deemed prudent to accumulate a reserve against it. This reserve is sufficient to cover the estimated liability for one year in respect of income-tax, and it has been decided to show it as a separate item in the balance-sheet.

While referring to this subject, I might mention, as a matter of interest to shareholders, that the bank paid the following amounts during last year for rates and taxes:—

	£
Income-tax	285,382
Land tax	17,123
Tax on note circulation	146,074
Rates	7,904
Total	456,483

ASSETS.

Turning now to the assets side of the balance-sheet we have:—

COIN AND CASH BALANCES, GOVERNMENT NOTES, LEGAL TENDER NOTES, BULLION.—Total, £8,772,285. Increase, £2,052,520. Coin, cash balances, and Government notes show a large expansion. Legal tender notes and bullion a moderate reduction—leaving the net increase as above.

MONEY AT SHORT CALL AND BILLS RECEIVABLE IN LONDON.—£20,283,642. Increase, £6,465,587. This increase represents, roughly, the growth that has taken place during the year in the Colonial deposits. As explained in my address a year ago, these funds are held in gilt-edged securities, readily realisable at any time.

In ordinary times our exchange operations with Britain and those with foreign countries which have to be settled in London approximately balance one another. Taking the transactions of a whole year, there is no very great difference between the amounts which we receive in London and those which we pay out there. During the last few years, and especially during the year which has just closed, the value of our exports which have been paid for in London has very greatly exceeded the cost of imports and other payments which have been made there. The tendency has, therefore, been towards the accumulation of funds in London, and this is the explanation of our now holding so large an amount at that point.

In accordance with our usual custom, provision has been made for the writing down of all our London investments to a figure at which they are readily realisable.

Owing to the increased value of money in London, the funds we have employed there have been yielding a very satisfactory return.

INVESTMENTS IN NEW ZEALAND, AUSTRALIA, ETC.

INVESTMENTS IN THE DOMINION.—£3,824,764. Increase, £548,602. This increase is occasioned by the bank's subscription to the last New Zealand Government Victory Loan.

The assets included under this and the two previous headings—coin, &c., and money at short call, &c.—are equal to 69.75 per cent., or roughly 13s 11d in the £, of the bank's liabilities to the public.

COMMONWEALTH AND FIJIAN GOVERNMENT SECURITIES.—£239,317. Increase, £105,001. The increase represents further investments made in the loans of the respective Governments.

ADVANCES.

	£		Increase. £
Bills discounted	1,502,233	....	26,483
Advances	17,929,615	....	539,828
	19,431,848	....	566,311

This increase is comparatively small. The circumstances which have contributed to make it so moderate will be referred to at a later stage of my address.

LANDED PROPERTY AND PREMISES.

LANDED PROPERTY AND PREMISES.—£361,108. Decrease, £38,759. The sum of £50,000 has again been appropriated from profits in reduction of this account. It is this appropriation that causes the decrease shown. The usual outlay in respect of repairs, improvements, &c., is, of course, continually going on.

Shareholders who have travelled throughout New Zealand and have seen a good many of our offices will understand that the amount at which the bank's properties stand in our books and in the balance-sheet is a very low figure compared with their

actual value. The writings-down for a considerable number of years have been on a very liberal scale, and I think it probable that for some time to come it may not be considered necessary to make further appropriations for this purpose.

Some figures were recently published in one of the banking journals stating the proportion which the item "Banking Premises" bears to the capital and reserves in the case of a considerable number of banks throughout the Empire. These figures show that in the case of 22 banks in the United Kingdom, the bank premises represented 20.93 per cent. of the capital and reserves. In 17 banks in Australasia the proportion was 14.48 per cent. Eighteen banks in Canada had 26.30 per cent. of their capital and reserves represented by this item.

Comparison with these figures will show that the 7 per cent. of this bank's own resources which are thus represented is an unusually small proportion, and that it cannot be said that we have an unduly large part of our funds "locked up in bricks and mortar."

PROFIT AND LOSS ACCOUNTS.

PROFIT AND LOSS.—The net profits for the year are £419,046, as compared with £388,022 at March 31, 1919. This is after paying interest on the guaranteed stock, making the usual grant to the officers' provident fund, and also providing for a special grant to that fund of £100,000, paying bonuses to the staff, writing £50,000 off premises and furniture account, and making all the necessary provision for bad and doubtful debts and also for depreciation in the value of other assets.

The amount brought forward from last year was £146,224, making a total of £460,270 now to be dealt with after providing for the £105,000 disbursed in the 6 per cent. dividend of December last.

It is now proposed to pay a further dividend of 7½ per cent. and a bonus of 4 per cent. on the ordinary and "B" preference shares (making with the December dividend already paid 17½ per cent. for the year), and a further 4 per cent. on the "A" preference shares (making 10 per cent. for the year).

This will make the total dividend and bonus for the year £268,750. Of the balance remaining, £296,520, we propose to place £150,000 to credit of the reserve fund and to carry forward the residue, £146,520, to the next account.

DIVIDEND AND BONUS.

DIVIDEND.—In view of the increase in the amount available for distribution, after making ample provision for all contingencies, the directors have felt justified in proposing a small increase in the rates of dividend and bonus on "B" preference and ordinary shares. It is, therefore, recommended in the report now submitted to you that the total distribution for the year upon these shares shall be 17½ per cent., instead of the 15 per cent. which has been paid for the last nine years upon the ordinary shares and upon the "B" shares since they were created in 1914.

AGGREGATE ASSETS.—Before passing from my review of the balance-sheet figures, I desire to direct your attention to the fact that our aggregate assets are now nearly £53,000,000, the increase during the year having amounted to £9,699,259.

BOARD OF DIRECTORS.

The members of the board appointed by the Government, whose term of office expired on March 31st last, were Messrs William Reece and David J. Nathan.

It is with great regret that we have to record Mr Nathan's sudden death on March 20th. He had been a member of the board for three terms of two years each. His wide experience and business knowledge made him a most useful director, and his valuable counsel was always made freely available to his colleagues in their deliberations.

The vacancy caused by Mr Nathan's death has been filled by the Government appointing Mr George Elliot, of Auckland, who is widely known in business circles, a director of the bank. Mr Elliot is with us to-day, and I have pleasure, on my own and your behalf, in extending to him a cordial welcome. Our old colleague, Mr William Reece, has, I am pleased to say, been reappointed a director. These appointments are for a term of two years from March 31st last.

LONDON BOARD.

We again place on record our high appreciation of the care and attention devoted by the London board to the bank's business there. The personnel of that board remains unaltered.

GENERAL MANAGEMENT.

Mr William Callender, to whose retirement, after a service of 50 years, reference was made at our last meeting, relinquished his duties on January 31st last, and Mr Henry Buckleton assumed the position of general manager on February 1st.

STAFF.

When we met you last year, I referred at some length to the relations between the bank and its staff, and informed you that during recent years the scale of our officers' pay had been considerably improved, and that, to meet the exceptional circumstances of the times, substantial bonuses were being paid to all our staff, a difference being made in favour of married men and others with dependents.

As the cost of living showed no sign of coming back to what we have been in the habit of regarding as normal figures, the board decided some time afterwards to have a complete review and revision of all salaries. The pay of every male member of the staff came under consideration, and the salaries of all were materially increased, the increases granted to the men who were drawing the smaller salaries being greater in proportion than those given to the more highly paid members of the staff.

These alterations in the scale of pay resulted in a large annual addition to our charges. Substantial as this amount was, the board have felt that, in view of the steadily rising cost of the principal necessaries of life, it could not be regarded as final, and a further review of the position has now been undertaken.

SUBSTANTIAL INCREASE OF PAY.

As far as the younger male members of the staff are concerned, this has just been completed, and has resulted in a very substantial increase of pay being granted to all the less highly paid of these young men. It will doubtless be of interest to you if I quote the scale which we have just adopted for the payment of our young men during the first 10 years of their service—a scale which is not rigidly adhered to, but is subject to increase in cases of exceptional merit. It is as follows:—

	£
First year	85
Second year	100
Third year	120
Fourth year	145
Fifth year	170
Sixth year	210
Seventh year	225
Eighth year	240
Ninth year	255
Tenth year	270

It will be seen that a youth who joins our service, as is usual, at the age of 16, may expect to be drawing a salary of at least £210 when he reaches the age of 21.

LIBERAL BONUSES.

I may add that, out of last year's profits, we have paid a bonus of 15 per cent. to married members of the staff drawing £400 a year or less, and 10 per cent. to all other officers. As this bonus was based upon the revised salary list adopted in October, 1919, it amounted to a considerably larger sum than similar bonuses in the past.

While treating thus liberally all the members of the bank's staff, it is the constant desire of the board and of the executive to discover those in the bank's employ who possess special qualifications, and I feel no hesitation in saying that there never was a time when the bank's service afforded greater opportunities than now for young men of more than average ability who endeavour to qualify themselves for the more important positions.

STAFF PENSIONS.

In fulfilment of a suggestion which I made a year ago, the board have now arranged to make to the provident fund, in addition to the usual annual grant, a special grant of £100,000 out of the profits of the past year. This is by far the largest amount which the bank has ever contributed to the fund which provides pensions for the staff, and it has enabled the scale of pensions to be very materially increased, so that an officer who has served the bank for 40 years or more will receive an annual pension of 75 per cent. of the average salary paid to him during the last 25 years of his service, instead of 75 per cent. of the average of 40 years. The minimum pension for those who have completed a full period of service is being increased from £175 to £200, and the maximum pension to £700.

It has afforded the board great pleasure to be able, on the shareholders' behalf, to provide for this material improvement being made in the provision for the old age or disability of those who have served the bank during the years of their working life. Your cordial approval is confidently anticipated.

As the increased scale of pensions did not come into effect during the past year, the directors have, out of the bank's funds, supplemented by a bonus of 10 per cent. the pensions which were drawn last year by retired officers or by widows.

Here I would like to express our warm appreciation of the loyal and efficient services rendered by our staff in New Zealand, Fiji, Samoa, Australia, and London.

GENERAL REVIEW.

The observations I have made complete the necessary review of the bank's affairs and of the figures of the balance-sheet, and before moving the adoption of the report and balance-sheet, I now, accord-

ing to my usual custom, proceed to take a brief review of the general situation.

THE ROYAL VISIT.

From an Imperial standpoint, an event of the first importance has been the visit last month to this Dominion of His Royal Highness the Prince of Wales.

It was obviously desirable that the future King and Emperor should acquire knowledge of his future realm and subjects by travel in and among them, and the decision that he should visit these far-off Dominions was sagacious and statesmanlike. His Royal Highness is having the opportunity to gain at first hand information regarding the lives and circumstances of the people in these lands, which it would be otherwise quite impossible for him to obtain. He has also come into direct touch with the leaders of political parties and with the rising public men in these far-flung portions of the Empire, and the knowledge he has thus gained will be of the greatest use to him, and of the greatest benefit to us, when the time arrives that the responsibilities of King and Emperor devolve upon him.

The visit has also had the advantage of enabling his future subjects to know something of their future sovereign, and, owing to his singular personal charm, kindliness of heart, and general consideration for all classes of the community, he has greatly endeared himself to the people, and won golden opinions on all hands. Wherever he has gone, he has been received with enthusiastic manifestations of genuine pleasure and the most unfeigned loyalty, and it is safe to say that, as the result of his visit, the Royal House of Britain stands more firmly established than ever in the affection and admiration of its overseas subjects.

NEW ZEALAND FINANCIAL POSITION.

New Zeadand has enjoyed a series of years of solid prosperity, and, although the facts and figures have been presented in various forms, it will not be amiss to reproduce some of them in order to emphasise the point.

BANK RETURNS.

The banking returns for the past quarter reflect the position very clearly. The free and fixed deposits disclose remarkable movements. The figures for a series of years are as follows:—

March Quarter.	Free Deposits. £	Fixed Deposits. £	Total. £
1914.....	13,475,771	10,554,479	24,030,250
1915.....	15,958,732	10,870,507	26,829,239
1916.....	19,091,949	12,182,104	31,274,053
1917.....	20,970,702	13,385,838	34,356,540
1918.....	21,614,302	13,891,195	35,505,497
1919.....	24,363,681	14,485,145	38,848,826
1920.....	34,814,896	15,850,195	50,665,091

As compared with 1914 the total deposits have more than doubled, but the gain is mainly in the free deposits—*i.e.*, the current account balances, which show an increase equal to more than 150 per cent. The fixed deposits have increased by about 50 per cent. In the six years 1914-19 the deposits increased by £14,800,000, while in the past year the gain is nearly £12,000,000. The phenomenal growth in the last year is probably attributable in great measure to the exceptional and large disbursements—upwards of £18,000,000—made by the Government in connection with the repatriation of soldiers, which must have increased bank deposits to a very substantial extent. It is also due, in some degree, to improved shipping facilities which have enabled a larger quantity of produce to be realised upon by exportation.

POST OFFICE SAVINGS BANK DEPOSITS.

The returns of the Post Office Savings Bank afford evidence to the same effect. The figures of the Savings Bank deposit accounts for the same period are as follows:—

	£
At March 31, 1914	17,422,563
,, 1915	19,802,753
,, 1916	23,147,158
,, 1917	26,901,830
,, 1918	30,281,798
,, 1919	34,454,130

We understand that for the year ended March 31, 1920, this amount has been considerably augmented, but to what extent we are not in a position to say, as the figures have not yet been published.

BANKS' DISCOUNTS AND DEPOSITS.

The discounts and advances of the banks have grown to a moderate extent only:—

March Quarter.	Discounts. £	Advances. £	Total. £
1914	2,017,107	21,649,643	23,666,750
1915	1,634,418	22,106,144	23,740,562
1916	1,437,655	22,246,237	23,683,892
1917	1,552,863	26,142,067	27,694,930
1918	1,223,465	28,094,431	29,317,896
1919	1,484,612	30,719,032	32,203,644
1920	1,280,188	30,761,854	32,042,042

In the six years the advances and discounts combined have increased by the moderate sum of £8,375,292. In the last year a decrease is shown.

EXPORTS AND IMPORTS.

A glance at the figures of the country's commerce throws a clear light on the causes of the movements in deposits and advances as above disclosed. Our exports and imports have been as follows:—

Calendar Year.	Exports. £	Imports. £	Excess of Exports over Imports. £
1910.....	22,152,473	16,748,223	5,404,250
1911.....	18,980,185	18,782,608	197,577
1912.....	21,511,626	20,576,579	935,047
1913.....	22,810,363	21,653,632	1,156,731
1914.....	26,253,925	21,144,227	5,109,698
1915.....	31,430,822	20,658,720	10,772,102
1916.....	33,281,057	25,045,403	8,235,654
1917.....	30,613,184	20,742,124	9,871,060
1918.....	28,438,187	24,131,729	4,306,458
1919.....	52,573,520	30,308,908	22,264,612

From the year 1914 onwards the excess of exports over imports has been exceptionally large. In the six years 1914-19 the exports have exceeded the imports by the huge sum of £60,559,584, or an average of over £10,000,000 a year. Here we have disclosed a further source whence banking deposits have been replenished and advances reduced or rendered unnecessary—in short, the explanation of the present easy local financial position and of the prosperous conditions generally prevailing in the country. But he would be a sanguine man who would affirm that similar conditions will prevail over the next ensuing six years. A continuance of such prosperity cannot be expected. It depends upon favourable world conditions, the prospects for which are at the moment not at all encouraging.

N.Z. GOVERNMENT REVENUE AND EXPENDITURE.

The returns of revenue and expenditure for the year ended March 31st last show a satisfactory position.

The revenue amounted to	£26,081,340
and the expenditure to	£23,781,925
Surplus for the year	£2,299,415

Both revenue and expenditure have shown rapid increase of recent years, the former having more than doubled and the latter nearly doubled during the last five years. The progress disclosed is interesting, and I therefore give the yearly figures:—

Year Ended March 31st.	Revenue. £	Expenditure. £
1915	12,451,945	12,379,803
1916	14,507,530	12,493,107
1917	18,355,194	14,058,770
1918	20,206,222	15,120,288
1919	22,352,372	18,673,599
1920	26,081,340	23,781,925

Adding the surplus for the year	£2,299,415
to the accumulated balance at March 31, 1919.....	£15,239,561
we have a total of funds in hand	£17,538,976

of which £15,180,250 are in "Investment Account" and presumably represented by securities on hand in either the Dominion or London. No doubt repatriation advances bulk largely in this total.

The net amount of the public debt at March 31st last was £193,913,192, to which figure it had increased from £96,644,455 at March 31, 1915.

EUROPEAN SITUATION.

Although the armistice was signed as far back as November 11, 1918, and the peace treaty ratified some time ago, the cloud of war still hangs over a large part of Europe, and the natural spirit of restlessness, engendered by and consequent upon the strain of the five years of war, has not yet died down. Manufacture in the greater part of the Continent is almost at a standstill owing to the impossibility of securing raw materials. Further, the disorganisation of Governments and the exchanges, as well as the difficulty of transport, resulting from a long and arduous struggle, delay and hamper the resumption of international trade. Europe is heavily in debt, taxation is high and oppressive, commodities are scarce and dear, the cost of living is excessive, and hunger and starvation are affecting many millions of people. The position is intolerable, and cannot last much longer. There is, however, a ray of hope in the fact that sorely stricken Belgium has made a serious and to a large extent successful effort to repair the ravages of war. The inflated paper currency of the country has been reduced by 300,000,000f, and the public debt has been reduced. The production of coal is now equal to the pre-war standard, and the industrial production generally is ranging from 35 to 60 per cent. of that of 1913.

WAR DEBTS AND THE POSITION OF THE UNITED STATES OF AMERICA.

The inter-ally indebtedness (that is to say, indebtedness between the Governments of the allied and associated countries) incurred for the purposes of the war, may prove of interest. The sums involved are shown approximately in the table following :—

Loans to—	By U.S.A.	By U.K.	By France.	Total.
	£	£	£	£
United Kingdom	842,000,000	..	..	842,000,000
France	550,000,000	508,000,000	..	1,058,000,000
Italy	325,000,000	467,000,000	35,000,000	827,000,000
Russia	38,000,000	568,000,000	160,000,000	766,000,000
Belgium	80,000,000	98,000,000	90,000,000	268,000,000
Serbia and Jugo Slavia.....	20,000,000	20,000,000	20,000,000	60,000,000
Other Allies	35,000,000	79,000,000	50,000,000	164,000,000
	1,890,000,000	1,740,000,000	355,000,000	3,985,000,000

CRITICISMS OF AMERICA'S EUROPEAN POLICY.

Assuming that loans from one ally are not set off against loans to another, the total volume of inter-ally indebtedness is approximately £3,985,000,000. The United States is a lender only. The United Kingdom has lent about twice as much as she has borrowed. France has borrowed about three times as much as she has lent, and the other Allies have been borrowers only. If the United Kingdom were paid half the amount that she has lent, she could easily settle her indebtedness to the United States, but her debtors are quite unable to make repayment; hence, Britain must, out of her own resources, endeavour to meet the situation. The United States is in the favourable position of drawing tribute from all the others, and, her trade balance being heavily in her favour, the American exchange has moved correspondingly heavily against Britain. It must be borne in mind that, while Britain was pouring out for the Allied cause her blood and treasure without stint, the United States of America, already the richest country in the world, was standing aloof, adding enormously to her own wealth by supplying food and munitions to the combatants. It is therefore no cause for shame to Britain, but rather a source of honest pride, that the gold standard is temporarily ineffective, because it is direct testimony to the supreme effort put forth by her in the cause of the world's civilisation. But if the exhausted nations of Europe are to recover, and business with them be placed on a satisfactory footing with a prospect of ultimate restoration of normal exchanges, it is necessary that they should be helped to produce goods. This means that they must be supplied with raw materials and, in some cases, machinery, and to do this involves supplying them with large credit. The only country in a position to afford this credit to the necessary extent is the United States, she having suffered less by the war than any other country. At one time it seemed probable that the States would nobly undertake the part, in the healing of the wounds of humanity and the reconstruction of shattered civilisation that circumstances had placed it in her power to perform; but, unfortunately, of late a feeling of indifference seems to have developed, and there appears now to be an actual indisposition to afford any help. Mr Henry P. Davidson, chairman of the League of Red Cross Societies, recently urged the vital necessity for Congress to appropriate 500 million dollars for use in Central and Eastern Europe to prevent the complete economic, political, moral, and physical collapse which was imminent. The views of official America were recently expressed by Mr Glass, the Secretary of the Treasury, in a statement made just prior to resigning his office to take his seat in the United States Senate. He declared that the Governments of the world must now get out of banking and trade, and that loans of Government to Government not only involve additional taxes or borrowings by the lending Government, but also a continuance by the borrowing Government of control over private activities, which only postpones sound solutions of the problems. The Treasury was convinced that the credits required for the economic restoration and revival of trade must be supplied through private channels, and that, as a necessary contribution to that end, the Governments of the world must assist in the restoration of confidence, stability, and freedom of commerce by the adoption of sound fiscal policies.

PROBABLE RESULTS OF HER POLICY.

It is generally considered that if the United States persists in this attitude, her action will recoil upon herself in loss of export trade and consequent growth of unemployment. Already her export trade has begun to decline, the exports for April being 135,000,000 dollars less than those for March. If this continue, a grave financial crisis there may be anticipated. The rudiments of it are already in evidence in the "price-slashing" that has been forced upon the merchants and in the restriction of credit by the banks. It is to be hoped that a consideration of these possible effects may yet dispose the States to do something substantial towards the relief of European economic necessities.

PAPER CURRENCIES—NATIONAL DEBTS AND TAXATION.

The world's paper currency has increased 600 per cent. since the beginning of the war, while the gold reserve, according to a summary issued by the National City Bank of New York, has increased by only 40 per cent. The face value of the paper currency of 30 principal countries of the world aggregated £1,450,000,000 in 1914, £8,000,000,000 at the date of the Armistice, and £10,000,000,000 in December, 1919, exclusive of the £6,800,000,000 of paper issued by the Russian Bolshevik Government. Meantime, the bank deposits and consequent use of cheques as a circulating medium have also increased, and the world national debts have grown from £8,000,000,000 in 1914 to £52,000,000,000 in 1919. In the Allied group, notes in circulation in July, 1914, amounted to £982,440,000, and in December, 1919, to £5,918,200,000, while gold reserves were £752,000,000 and £1,014,200,000 at the respective dates. The note issue of the Central Powers in July, 1914, was £239,400,000, and in December, 1919, £3,754,200,000, and gold holdings respectively £119,000,000 and £65,400,000. The note issue of neutrals in July, 1914, aggregated £233,200,000, and in December, 1919, £484,200,000, while gold reserves were respectively £103,200,000 and £290,200,000.

After the Napoleonic Wars the National Debt of Great Britain was equal to £45 per head. The average debt per head to-day is £178, nearly four times the burden laid upon the country after Napoleon's defeat. Against this present day indebtedness there are, of course, some assets to be set. To her Allies and the Dominions Britain has lent £1,700,000,000. Of this, however, about £600,000,000 has been advanced to Russia, and this may presumably be classed as a doubtful debt; of the balance, she will be fortunate if she recovers 50 per cent. Before the war the British nation was undoubtedly saving money, and every year had a surplus of nearly £400,000,000 to invest. The aggregate of its wealth was estimated to be at least £17,000,000,000. Against this Britain has had to raise a national mortgage of £8,000,000,000. It is estimated, therefore, that she has borrowed up to 40 per cent. of her accumulated heritage. In a normal year of peace Britain must raise £400,000,000, or more than double her pre-war revenue, for the service of the war debt alone—that is, for interest on the War Loans and the sinking fund of ½ per cent. connected therewith. Facing taxation of, say, £1,000,000,000 annually, Britain is back again at the Napoleonic standard of taxation.

PRICE LEVELS.

The question of the cost of living continues to be a "burning" one, and the fact that prices have continued to rise, notwithstanding the conclusion of hostilities and the return of the fighting men to peaceful avocations, is leading many to wonder how long existing price levels are likely to be maintained. Some there are who affirm that high prices have come to stay, but in that view I cannot share, though I admit that the range of future prices may be somewhat higher than before the war.

In the Napoleonic War English prices rose 75 per cent., and they took eight years to become normal again. In the American Civil War prices rose 100 per cent., and took over 12 years to become normal. How long it will take on this occasion to reach normality it would be impossible for anyone to forecast, but it seems obvious that the process of deflation has set in. In America, Japan, and, to a lesser extent, in Great Britain, prices of commodities have already slumped, the speculative fever has been curbed by the banks restricting credit, and financial crises have resulted. The changes that have taken place in these countries are bound to have far-reaching effects.

PRICES AND GOVERNMENT CONTROL.

In the matter of regulating prices, some people are disposed to look for relief to Government intervention, and control; but while, as a temporary measure, good may result therefrom, it is fairly certain that no permanent relief can be secured in that way. The generally accepted view among people qualified to judge is that the less Government interferes with trade and industry the better. This principle was well enunciated by Lord Macaulay over half a century ago when discussing suggestions that had then been made for Government control of and assistance to trade. He remarked :—

> It is not by the intermeddling of the omniscient and omnipotent State, but by the prudence and energy of the people that England has hitherto been carried forward in civilisation; and it is to the same prudence and the same energy that we now look with comfort and good hope. Our rulers will best promote the improvement of the nation by strictly confining themselves to their own legitimate duties, by leaving capital to find its most lucrative course, commodities their fair price, industry and intelligence their natural reward, idleness and folly their natural punishment, by maintaining peace, by defending property, by diminishing the price of law, and by observing strict economy in every department of the State. Let the Government do this; the people will assuredly do the rest.

These views still find general acceptance among the political economists of our day.

In searching for remedies for the existing evils we naturally first make an endeavour to seek the causes of the evils that we wish to remedy. There we find ourselves at once on debatable ground. One school of economists maintains that currency inflation is at the root of all price inflation. Another school affirms that price inflation is solely the result of the operation of the ordinary laws of supply and demand. For my part, I am disposed to attribute the appreciation in prices from which the world is at present suffering to no single cause but to a variety of causes, including both of those just mentioned. The question is a very complex one, because a multiplicity of influences are at work to bring about the result arrived at, each exercising a varying degree of effect according to varying circumstances and the nature of the commodity concerned. It would certainly be wrong to ascribe to any one particular influence the whole responsibility for the unenviable situation in which we now find ourselves. But in looking for remedies, as we undoubtedly must if we are to restore ourselves to more tolerable conditions, we can see broadly individual influences which tend to the perpetuation of price inflation, and if these be dealt with and removed, even though only one by one, we shall be assured that we are gradually traversing the road which will lead us back to more reasonable price levels. Among these remedies the following unmistakably take primary place :—

(1) The exercise of the strictest economy in public and private expenditure.

(2) Honest effort to increase production to the utmost possible extent.

(3) Encouragement and development of every class of industry and uncompromising discouragement of all speculation.

(4) Deflation of the world's currencies, which will to a large extent result from the application of the three remedies first mentioned.

Along these lines it is our duty to proceed if we wish to hasten a return to more normal conditions, and I venture to affirm that, if the above remedies were put generally into active operation, it would not be long before a welcome and substantial change in the situation would become apparent.

LABOUR AND CAPITAL.

Upon our national industry our whole national life depends. A certain standard of production united to a reasonable method of distribution are the first requisites of a nation's physical and moral well-being. We live by winning from Nature the means of life. Production, indeed, is prerequisite to distribution, for without the former the latter is impossible. To-day these two great factors in our national life leave much to be desired.

An intelligent and sincere co-operation between the two great agents of production—Labour and Capital—is absolutely essential to an ameliorated condition of our people, and yet that kind of co-operation, not only in New Zealand but in the Old World, seems to be diminishing rather than increasing. The policy of organised Labour the world over is to fight Capital, and not to unite with it. The world is confronted with an unparalleled economic crisis. Want and starvation are stalking through Europe, leaving widespread death, misery, and suffering in their track. Unfed and unclothed millions are crying in despair for food and raiment. Lack of a reasonable measure of comfort is widespread owing to an insufficiency of the necessaries of life; and before this sad spectable the mutually destructive struggle between Labour and Capital seems to be growing more and more bitter and intense. Strikes on the shallowest pretences; ever increasing demands for shorter hours; limitation of output and a conflict growing blindly ever more acute between employers and workmen seem to justify almost a gospel of Despair regarding our social and economic future.

Never before in the history of the world have the needs of increased production been more clamant than to-day—never before were the two partners, Labour and Capital, more bitterly estranged and antagonistic. I do not say that the blame—for the spectacle is a sorry commentary on our civilisation—is wholly with one side or the other. Capital has never sufficiently brought to its consideration of the claims and aspirations of Labour the lamp of human sympathy. Recriminations and denunciations in the present great world crisis will serve no purpose but that of intensifying the evils of the estrangement and diminishing the hope of reconciliation. "It is better to strive for the good than to rail at the ill"—to remedy the cause than to denounce it.

Two great desiderata call aloud for recognition: First, more sanity on the part of Labour—it should cease to be so immersed in agitation and so blind to its results; and secondly, more genuine evidence of willing co-operation and concession on the part of Capital.

Crusades against the soaring cost of living, profiteering-hunting, fixation of prices—these are but symptoms of the disease of a paralysed or arrested production, and the remedy lies in getting to the root of the evil instead of applying palliatives to the symptoms. If the day of radical changes in the structure of our industrial system is inevitable, the sooner it is recognised the better, and the utmost human effort must be made to find a just and permanent modus vivendi.

Much of the present bitterness between the two great agencies must be due to misunderstanding or simply blind antagonism, and our unflinching determination should be to dispel these causes by bringing the parties as much as possible together. I do not ignore the stupendous difficulty of the problem, but it must be faced and solved or national disaster is before us. To this end the proposal that the Prime Minister should call a national industrial conference of both employers and employed is surely a step in the right direction. This would at least disclose more clearly root causes and basic differences and open up a possible path to genuine co-operation and industrial concord.

RESULTS OF AGITATION OF PRODUCTION.

In a land like this, so righly endowed by Nature with all that is necessary for solid national comfort and happiness; with a sturdy race of purely British blood and a climate that stimulates energy; it is surely deplorable that industrial antagonisms should so paralyse the hands of industry and stifle the creation of wealth that many have to face want where plenty should be their lot and comfort their heritage.

That production in New Zealand has suffered grievously from the causes I have indicated no one can deny, and the following table is but eloquent proof of that conclusion :—

	Exports. 1914.	Annual Average. 1915-19.	Increase or Decrease per Cent.
Wool .....(lbs)	220,472,898	214,008,975	2.9 decrease
Meat .....(cwt)	3,229,970	3,475,407	7.0 increase
Butter.....(cwt)	434,067	376,154	13.0 decrease
Cheese .....(cwt)	863,776	1,070,936	23.0 increase
Tallow .....(cwt)	490,300	500,516	2.0 increase
Hides .....(No.)	412,822	359,298	12.0 decrease
Hemp .....(tons)	23,928	26,493	10.0 increase

At the close of 1919 there were in store 126,722,232 lbs wool and 2,107,672 cwts of meat, which, under normal conditions, would nearly all have been exported, and should therefore be credited in the above table, in which case the average for 1915-19 would, in respect to wool, be increased by over 25,000,000 lbs, and would convert the apparent shrinkage into an actual increase. But, even after making all such allowances, the average increases are not encouraging, and, unless a great deal more is accomplished, the pinch of "hard times" will be felt with some severity. The values of our products are declining, and, when the Imperial purchasing scheme terminates, a new set of conditions is bound to arise—a set of conditions that will be full of difficult problems for bankers, business men, and producers. Wool, meat, tallow, hides and skins have already receded from the high level reached since the Armistice was signed in 1918. The statistical position in respect to most of these products makes it inevitable that prices must go lower. For instance, in the case of wool, the quantity in hand is far in excess of the consumptive capacity of the available spindles, and, even if all the spindles that were in operation prior to the war were in operation now, the weight of wool would be more than could be dealt with in a reasonable time. With the embargo placed on speculation by bankers the world over, spinners are operating only from hand to mouth, and they are safe in pursuing such a policy, for the wool is at their call whenever they require it. Meat, too, seems likely to present serious difficulties because of the enormous quantity in store. There is not yet sufficient shipping available to clear the cold stores, and, even if transportation could be arranged, it would not prevent prices from falling. Though some of our products may hold to something like their present values—dairy produce, for instance—the general tendency is downwards, and, should the decline be anything like 25 per cent., the situation would become one of some seriousness.

In the six years, 1914-19—the years of war prosperity—the exports aggregated £202,590,695, or an average of £33,765,116 per annum. A drop of 25 per cent. would reduce this to £25,323,837, and bring us down to the level of 1914, when the exports were valued at a little more than 26 millions. Such a shrinkage would be immediately reflected in the Treasury returns, and, unless the strictest economy is exercised in every Department of the State, increased taxation would, in that event, seem to be unavoidable. Businesses which have been built up on the basis of inflated prices and land values that have been rushed upwards on the same basis would suffer severely in the process of deflation.

WHEAT GROWING.

At this particular juncture, the growth of cereals—more especially wheat—is the department of agriculture which demands the most general attention. There is an undoubted shortage in the world's supply at the present time, and the prospects for the future are decidedly gloomy. This Dominion should certainly

grow all the wheat required for its own consumption; but for several years it has not been doing so. The area under wheat crop has for some time been steadily declining. Ten years ago, there were 311,000 acres devoted to wheat, and the yield was 8,661,100 bushels. Last season it is estimated that the area under wheat crop was only 141,000 acres, and the estimated crop 4,100,000 bushels. In view of the certain deficiency in the world's supply, and the consequent probability of high prices ruling for wheat, it is to be hoped that our farmers will be encouraged to sow wheat liberally, so that at least our domestic needs may be supplied if not a surplus made available for export to some of the countries that are faced with starvation. To encourage this industry, we may reasonably look to the Government to guarantee a remunerative price to producers.

LAND VALUES.

In several of my past addresses, I have referred to the high prices paid in this Dominion for country lands, and pointed out the danger of basing land values upon current prices ruling for produce. Similar warnings have been uttered by others occupying responsible positions, but so far they have gone unheeded.

The buying and selling of land—especially farm land—has proceeded at a rapid rate, and prices of such land, which were thought a year ago to have reached very high figures, have mounted higher and higher. It is no doubt a matter of common knowledge that many of these transactions are carried through on a very small cash payment, nearly the whole of the purchase money being represented by a mortgage, or a series of mortgages, of which the last vendor holds the latest. The facility with which men possessing little capital have thus been enabled to purchase areas of land much beyond their ability to improve and work, has been a potent factor in putting up the price of land against the buyer who really has adequate means to carry out his undertakings.

Now, making the fullest allowance for the productivity of the soil and our wonderful climate, I am still of opinion that sooner or later this country will suffer severely through the absurdly high rates at which, to satisfy the earth hunger that is existing, country lands have been changing hands within recent times. It may be argued—in fact, is argued by some people—that buyers are justified in giving such prices when they take into account the returns they have received from the soil during the past five years, and I admit that, in some cases, the results have seemed to warrant the prices paid. But, with the existing prospect of dearer money, and the certainty of a decline in the purchasing power of the countries that have been devastated by the war, it is neither wise nor prudent to base land values upon the assumption that the late boom prices for our produce are going to continue indefinitely. Many cases have come under our notice where the price recently paid has been double, and in some instances treble, that at which the property had changed hands in 1914. Prices for dairying land have run up to £150 per acre, and we have heard reports that even £200 per acre, and more, has been paid in some cases. Where the greater part of such purhcase-money remains on mortgage, imagine what would be the position of the mortgagor, thus heavily encumbered, in the event of a fall in the price of dairy produce of, say, 25 per cent.

It may be that a mortgage does not occasion a farmer the same concern as it does a business man, for I know of some farms on which no fewer than five mortgages were current at the same time. Needless to say, that class of security does not commend itself to us. Indeed, with the object of checking speculation, this and other banks in New Zealand are refusing advances to customers to enable them to buy land at these inflated prices unless applicants, by including other property in the security, can make the cover unquestionably ample.

It is significant that many shrewd and well-to-do people are to-day taking the utmost advantage of the present land boom to sub-divide and realise upon their holdings.

REPATRIATION.

A large expenditure has been going on in connection with the work of repatriation of soldiers, and a total of 13,684 men had up to the end of May last received financial assistance from the State in some shape or form. The outlay incurred has been summarised thus by the Minister of Lands :—

	£
Advances for stock and improvements	1,854,634
Advances for purchase of private lands.....	7,181,094
Advances for purchase of town dwellings.....	4,454,708
Cost of estates purchased for settlement under the Land for Settlement Act and offered to soldiers.....	2,834,198
Cost of estates now being subdivided and prepared for settlement.....	1,680,571
	18,005,205

This repatriation work is most desirable. It is in the interests of both the men themselves and also of the country, and it is satisfactory to know that such a great deal has been done.

IMMIGRATION.

It seems to me that one of the pressing needs of our country at the present time is population. All classes of the community are suffering from lack of labour, and the present production of field and factory could be, with ease, almost doubled if the necessary labour were available. The energetic prosecution of public works in the country is also greatly impeded by the dearth of necessary labour. The natural increase of the population is much too slow to meet the needs of the country. According to the last census—that of 1916—the European population was then 1,099,449. The increase in ten years from 1906, when the number was 888,578, was equivalent to only 23.7 per cent., or an average increase of only 2.37 per cent. per annum. The average annual increase for the 20 years ended in 1916 was 2.81 per cent. This, of course, includes the increase resulting from ordinary immigration during the period. Such an increase is far too small for a country calling for population to win its latent wealth and develop its capabilities. It has not been the policy of former Governments in recent years to give that encouragement to immigration which the needs of the country seem to demand; but I am glad to say that there is every prospect of greater immigration activity on the part of the present Government. Unless some special effort be made, immigrants will undoubtedly be attracted elsewhere and be lost to New Zealand. The Commonwealth Government, it was recently announced, have an immigration campaign in view, and intend to adopt extraordinary measures to divert the surplus male and female population of the United Kingdom to Australia. It is to be hoped that the New Zealand Government will be no less aggressive.

MONEY MARKETS.

The conditions of the money markets of the world point to the probability of scarcity of money and consequent higher lending rates in the not distant future. The deflation of the currencies, which is held by most economists to be the essential preliminary to the re-establishment of satisfactory financial conditions and the speedier revival of industry and trade, will inevitably be accompanied by appreciation in the value of money. Reduced supply will mean increased value of the quantity remaining available. A preliminary movement of this nature has already taken place consequent upon the restriction placed by leading banking institutions in various parts of the world upon facilities for speculation. An upward tendency in the value of money is apparent. The Bank of England rate is now 7 per cent., to which it was raised from 6 per cent. on April 15th last. The British Government is paying 6½ per cent. on its Treasury bills. Its Exchequer bonds with a currency of two years are reported to be yielding over 7¼ per cent. to the investor, and flat loans with a currency of 25 years and more are returning to the investor £6 6s 9d per cent.

All borrowers, both Government, public, and private, must be prepared to pay higher rates for future accommodation. The fairly certain contingency of higher future rates should prompt a very careful scrutiny of the circumstances surrounding all contemplated undertakings, whatever their nature may be, involving the employment of borrowed capital, in order that would-be borrowers may first satisfy themselves that the project in hand is likely to prove sufficiently profitable to justify the heavy handicap which the cost of the necessary capital is likely to impose. In the case of Government undertakings, it is important that the authorities should be on their guard to resist any political pressure designed to force them to embark in ventures which could very well be left to private enterprise.

The Prime Minister, the Right Hon. W. F. Massey, has, on more than one occasion, urged the necessity for economy, and the injunction cannot be too strongly emphasised at the present time both as regards public and private expenditure of every description. Unfortunately, the public does not yet appear to have appreciated this necessity, because expenditure of every kind continues for the most part on as lavish a scale as ever. But in this respect New Zealand is not singular nor by any means the worst offender. The whole civilised world has been indulging in a riot of extravagance, and the reckless outlay has contributed to feed a flame which, if not quenched, may shortly develop into a conflagration which may threaten the very foundations of ordered civilisation.

It will be noted that the Minister of Finance has just issued the prospectus of a Government loan of two millions, with a currency of ten years. The issue price is to be par and the rate of interest 5 per cent., subject to income-tax. The Minister further intimates that another loan, of considerably larger amount than this, is practically certain to be offered locally before the end of this year.

The Minister of Finance is, I believe, wise in not endeavouring to obtain his requirements in Britain or elsewhere outside the Dominion; such borrowing, if practicable, would at present be unduly expensive.

FUTURE OF PRODUCE MARKETS AND TRADE.

With the cessation of the Imperial Government's purchase of produce, the producers of New Zealand must make the best arrangements they can for the financing and marketing of their produce. The banks will, no doubt, be called upon to provide, on terms and conditions to be arranged, very large sums for this purpose. That the position is full of difficulty and danger must be obvious to all. The stores are full of produce which cannot possibly be moved before the flush of the next season, shipping is still scarce, and likely to remain so, and the terminal markets are glutted so far as meat and wool are concerned. It may be desirable, if not imperative, to look for new markets for wool and meat, but in this connection we can but turn to America, which is the only country apart from Britain that can offer a market. The British Government is itself endeavouring to avail itself of the American market in an effort to quit its own accumulations of wool and meat. The prospects in the United States appear no better than they are in Great Britain. Wool offered in New York registered a sharp decline, and it is yet to be determined whether a reaonably good market can be secured there for mutton and lamb, although, for the latter, arrangements have been made for several shipments within the next few months totalling, in all, about 500,000 carcases. In respect to frozen meat the United States Bureau of Markets, Omaha, under date March 5th, said:—

> Following the announcement of the exportation of 300,000 lamb and mutton carcases by the British Government to the United States early in the week, all Eastern lamb and mutton markets were sharply lowered. Declines for the week ranged from $2 at Boston to $4 at New York and Philadelphia, with all grades similarly affected, and conditions at the close of the week unsettled.

U.S.A. PACIFIC COAST MARKETS.

Since the importation of frozen meat has the effect of cheapening that article, there is some hope that the markets of the Eastern States may be capable of absorption, but care will have to be taken in dealing with markets on the Pacfiic Slope. A San Francisco firm in a circular letter to correspondents says:—

> We strongly advise against New Zealand shippers sending any meats to this coast on consignment unless they want to get "stung," as it is an easy matter to trade on other people's money. If coast dealers want lamb, mutton, or other meat products, they can put up a letter of credit, otherwise the New Zealand dealers had better keep their meats in their freezers, as we have known meat products to have practically eaten themselves up with storage and other charges when shipped to this coast on consignment.

The circumstances of the time demand that business men should rather take in sail than crowd on canvas, and all would be well advised not to stretch their financial commitments too far. The civilised world has been suffering from an excess of "idle fancies," which have contributed to a mass of social and economic theories that have clouded people's minds, and led many of them actually to believe that they can and will live and prosper by these theories rather than by work. There are certain economic principles by which men and nations live and prosper, and never before, at least in living memory, was there such a need to bring back a full recognition of these principles. The world's need for reconstruction is real and pressing, and the attitude so generally prevailing toward work and production must undergo a change unless disorganisation or, perhaps, disaster is to eventuate. Diminished production, decreased thrift, and curtailed credit furnish the essential elements of a financial crisis, and such a crisis seems inevitable in the not distant future unless we abandon dreaming, and settle down to work and the practice of thrift. "Increase production and avoid extravagance" should be the slogan for the people of New Zealand.

Gentlemen, I now move that the report and balance-sheet as submitted to the meeting be adopted. If this be agreed to, the dividend will be payable at Wellington to-morrow, and at branches on receipt of advice.

At this stage, before the motion for the adoption of the report and balance-sheet is seconded and put, may I be permitted to make the following statement, which will be of considerable interest to you. It is this: The question of the rearrangement of the bank's capital and reserve fund has lately engaged the serious consideration of the board, and tentative proposals have been discussed with a view to securing the introduction of legislation during the ensuing session of Parliament which, if given effect to, will be of mutual benefit to the Government and the shareholders. In the meantime, pending the decision of the Government, I am not at liberty to disclose the nature of these proposals; but I have no doubt that if they are passed by Parliament in the form to be submitted by the board, they will meet with your approval. There is no intention to materially alter the *status quo* as between the Government and the shareholders.

As a result of this announcement, I venture to hope that the public will not get too exalted an idea of the value of the shares.

VIEWS OF MR W. WATSON.

Mr W. Watson said: According to our custom, now time-honoured, it is my turn to second the motion for the adoption of the report and balance-sheet, which I have much pleasure in doing.

The chairman has left little to say regarding the business of the bank, but, as one of your elected directors, I may, without transgressing obligations of secrecy, briefly state my own views as to the prospects and value of your property.

The general position of the institution I regard as, commercially speaking, unassailable. Intrinsic value of security rather than current value is our watchword, and full precautions have been taken against any decline in present market values.

You will have noted with pleasure the large increase of business since last year, and you will also note that in the proposed distribution of profits £150,000 is allocated to reserve fund and £50,000 to writing down premises and furniture, the latter being already much below Government valuation. And looking back for many years, you will note that the same procedure has been adopted. Now, as these constant additions to reserve funds and writings down of property practically mean accretions to the capital with which the bank trades, the benefits of them must in the long run accrue to the Government and yourselves, whatever shape such benefits may take. These increases to the bank's funds carry corresponding earning power, and therefore it only requires a calculating rather than a sanguine mind to compute the value of the goodwill, which is an important asset not taken into account in the balance-sheet. In the present day banks and insurance companies do not confine their operations to any one country, and, looking ahead only a very few years to the prospects of the Bank of New Zealand, they appear to me as very good.

I take credit to myself for having, before the establishment of the present board, singled out your present general manager, Mr Buckleton, for rapid promotion. His subsequent career has proved his merits, and your interests are safe in his hands.

I congratulate the staff in New Zealand, London, and elsewhere on what we have been able to do for them by way of well-deserved increases to salaries, allowances, and pensions. Here I would say to those who have the responsibility of advising youths as to the choice of careers in life that they should not miss inquiring what the bank has to offer in admitting officers to its staff.

I intend to stand again for re-election to the board at the meeting to be held in December next, and trust to receive the usual mark of your confidence.

SHAREHOLDERS' CONGRATULATIONS.

Mr R. B. Jackson (Nelson) asked how the money at short call in London was invested.

The Chairman stated that at March 31st the bank had £19,600,000 invested at short call in London, and of this £11,650,000, or 60 per cent., was in Treasury bills, which at present bear a rate of 6½ per cent. He did not think they could have a better investment.

Dr Prendergast Knight said that he had much pleasure in congratulating the chairman on the results of the past seven years' operations since the arrangement was come to between them for increasing the capital of the bank. He congratulated him on the fact that that increase had now taken place.

He thought that all present would agree with him that the present tenure of office by directors was too short. Two years at Wellington was too short altogether. If the bank had to go to the Government for legislation, as just indicated by the chairman, he thought that it should be borne seriously in mind that the reasons that had led shareholders to agree that directors should have a longer tenure than two years had been fully justified by the experience of the past seven years. During that period two gentlemen had had their careers as directors terminated, though they had gained great knowledge and experience of the bank's affairs, and were in a position to render still more useful service to the institution. They were not reappointed on retirement, but he was glad to say that both had since been reappointed by the Government or by the shareholders. Shareholders were of opinion that seven years would be the proper period of tenure for directors, but four years at least should be the minimum period, which would allow of one director retiring each year. The Government had four directors, so that it could very well give its directors a four years' tenure of office. He pointed out that only half of the shareholders' directors and only half of the Government directors of seven years ago now remained with them, but he was glad to see that most of the shareholders' committee of 1913 were still there. He congratulated the shareholders and the directors and staff upon the very great increase that had taken place in the bank's business. The position of the bank showed that it was in fact, as well as in name, *the* Bank of New Zealand. He congratulated the board on the increases of salaries and pensions, and assured them that the shareholders fully agreed with them in the practical appreciation they had thus shown of the good work of the staff.

DIRECTORS' FEES.

Mr M. F. Barnett (Christchurch) said that there was one little item omitted by the directors in their report that he should like to touch upon, and that was the question of the directors' fees. The amount of their fees had not been altered for a number of years, and when they were fixed the position of the bank was very different from what it was to-day. He had seen a statement recently that a big institution—not a bank—operating in New Zealand, with headquarters in London, had agreed to pay its directors £5,000 a year, free of income-tax, though it was a very much smaller institution than the Bank of New Zealand. He thought that the directors of the bank were much underpaid, particularly the chairman, who, if it was the same in the Bank of New Zealand as in other institutions, had generally to do most of the work. He hoped, therefore, that the chairman, in any revision of fees that might be made, would have special consideration. He thought that the directors' fees should be very substantially increased.

THE RESOLUTION.

Mr John Mill (Port Chalmers) said that he thoroughly agreed with what the previous speaker had said. He therefore moved: "That in the opinion of the shareholders the time has now arrived in the history of this bank when the directors should receive the same remuneration as the directors of our neighbour bank, the National. We shareholders recognise that it is due to the business ability of our home and colonial directors that the bank now occupies the premier position of any other similar institution, and we feel that the services rendered by the directors should be adequately rewarded by increased remuneration." The directors, he said, deserved very well indeed of the shareholders and of the Government. Their business had been brought up from a very poor position to the present position, in which they had £2,500,000 in reserve. At the time he referred to, he was offered 300 shares in the bank by a man who said that he would give him 5s per share to take them off his hands. He had said "No" to the offer. He thought he had enough Bank of New Zealand shares then, but he did not think he had enough now. He had much pleasure in moving the resolution, and he was sure that it would be carried unanimously, because they all knew the directors had done justice both for them and for the country.

The Chairman said that he must get the report and balance-sheet adopted before the resolution just moved could be dealt with.

The report and balance-sheet were unanimously adopted.

Mr Mill again moved his resolution.

SHAREHOLDERS' UNANIMOUS APPROVAL.

Mr D. Jones, in seconding the resolution, said that one bank at home was paying its directors £10,000, free of income-tax. He was very glad to hear the chairman's remarks about how well the board had treated the staff of the bank, and he thought that the directors also were entitled to a substantial increase. He did not think the resolution should state how much. That was for the Government to say. He had, however, very great pleasure in seconding the motion.

Mr J. C. Hanna (London) supported the resolution, saying that the directors of institutions doing one-third of the business of the Bank of New Zealand were drawing one-third more in fees. He thought it should be put on record that the fees should be at least doubled. It was absurd to pay all the directors of the bank, including the directors in London, fees amounting to a paltry £4,650 a year.

Mr Frank Dyer asked how much was now paid to the directors, and was informed that the chairman was paid £750, on which he paid income-tax, and the other directors £450 each, also subject to income-tax.

Mr Hanna: It is ridiculous.

Dr Prendergast Knight said that he was astonished that the Auckland directors would come to Wellington to attend the fortnightly meeting of the board for such a paltry remuneration.

Mr J. H. Upton: It is not for the remuneration we come to Wellington fortnightly. We would not come for the remuneration. But there is a little credit about belonging to the board of directors of the Bank of New Zealand; and, besides, we have the pleasure of meeting the shareholders twice a year.

Mr R. W. Kane said that the remuneration of the directors was fixed by Act of Parliament, and any resolution the meeting passed could not increase it. What the meeting could do was to pass, say, a recommendation to the Government that the remuneration should be increased.

The Chairman said that he understood that the resolution was intended to be a recommendation to the Government.

Mr Mill: Yes.

Mr Mill then put the resolution, which was carried by acclamation.

CHAIRMAN'S THANKS.

The Chairman said that all the members of the directorate had to say was that they were very grateful indeed to the mover and seconder of the resolution and to the other speakers for the exceedingly kind remarks they had made upon that somewhat delicate question. Whether effect would be given to the recommendation or not he did not know; but, in any case, he was quite satisfied that the interests of the bank would have precisely the same care from the directors that they had had in the past.

VOTE OF THANKS TO STAFF.

Dr Prendergast Knight proposed a cordial vote of thanks to the staff, including the new general manager (Mr Buckleton) and the new Government auditor. It was a very great pleasure to the shareholders to know they had in the service of the bank two such gentlemen, and that their chief auditor came from the service and not from outside. The staff which had produced such a balance-sheet as they had before them that day deserved their best thanks.

Mr J. Mill seconded, stating that as a result of his experience both here and in London, he was convinced that the Bank of New Zealand was one of the best-managed banks so far as the staff was concerned that he had ever known. He paid a high tribute to the ability and courtesy of the London assistant manager of the bank (Mr Robert Mill).

MR HANNA ON THE BANK'S PROGRESS.

Mr J. C. Hanna said that he desired to make one or two brief observations on the balance-sheet and statement of accounts that had just been presented. If they took their minds back to the early 'nineties of last century, with the attendant financial anxieties of that period, and compared the position as it stood then with the position as it stands to-day, the most optimistic amongst them must be amazed at the rapid strides the bank had made during the intervening period. Thirty years ago the total assets, including the Estates Company's liability of £1,850,000, stood in round figures at £10,000,000, on which, after deducting fixed charges and about £12,000 for rates and taxes, the net profit equalled about ½ per cent. If they turned to the balance-sheet at present in their hands they would find that, while the Estates Company's liability had completely disappeared, the total assets aggregated £53,000,000; and on that amount, after deducting the whole of the administrative expenses and the huge sum of £456,000 for rates and taxes, the net profits were a shade under 1 per cent. But in considering the earning power of the Bank, it would be well to keep in mind two points: firstly, that they had cash and liquid securities to represent the high ratio of 63 per cent. of their total assets, and obviously on the liquid resources of this or any other bank the return in normal times—and the present times were anything but normal—was necessarily a moderate one. Secondly, since 1891 the taxation under all heads had increased by 600 per cent. In other words, had the liquid reserve ratios and the rates of taxation been maintained on a level with those current in 1891 the bank to-day would have shown an increased earning power of 1½ per cent.—an increase of practically 300 per cent. He ventured to say that if their friends had told them in the early 'nineties that the Bank of New Zealand would in the future pay its shareholders increasing dividends, set aside large sums to strengthen the officers' pension fund, freely write down its landed property and premises, and at the same time accumulate a reserve of 2½ millions, all in 30 years, they would simply have laughed at them. It was an easy matter at a meeting such as this to say pleasant things about the administration of the bank. Whether they were deserved or not was entirely a different matter. But, in reviewing the business of the bank for recent years, they had abundant evidence, backed up by solid results, to justify their thanks to the directors and the staff for their services during the past and recent years. He congratulated the directors on the appointment of Mr Buckleton, a man of recognised capacity, to the position of general manager.

The Chairman said that it had been extremely interesting to hear the remarks made by Mr Hanna, who had been one of the early officers of the bank, had filled a most responsible position, and was very well acquainted with the position of the bank at the troublous period referred to. He was very glad to see him at this meeting and to hear such interesting facts, though well-known to some of them, as he had given them.

He then put the motion:—"That a cordial vote of thanks be accorded to the staff for their services during the past year," and asked Mr Buckleton to reply on behalf of the staff.

The resolution was carried unanimously.

Referring to Mr John Mill's remarks regarding the London staff, the Chairman exhibited a handsome silver salver, which is to be presented to Mr Robert Mill by the New Zealand returned soldier members of the bank's staff. He said that he understood that Mr Robert Mill was no relative of the shareholder who had just eulogised him so highly. Mr John Mill: "Not unless you go back to Adam."

MR BUCKLETON'S REPLY.

Mr Buckleton, in reply, said:—Mr Chairman and Gentlemen,—On behalf of the staff of the bank I express our appreciation of

the vote of thanks which you have just passed. Ever since the commencement of the war, the staff have in various ways had a most strenuous time, and it is a great satisfaction to us all that the board have recognised this in granting liberal increases to salaries and by making the handsome donation of £100,000 to the pension fund. It is always a source of pride to belong to a great and successful institution, and our bank is now one of the great banks of the world. We are proud to be members of its staff and to do our share in upholding and advancing its interests. Now that we are settling down after the strenuous period of the war, the staff are looking forward to improved conditions, and the deserving ones will not look in vain, as the board hold very strongly to the view that men of promise are entitled to opportunities of acquiring experience which will lead to rapid and substantial promotion. You have mentioned, Mr Chairman, and so has Mr Watson, that employment in the bank's service offers good prospects, and I unreservedly endorse those statements.

I desire also to express, on behalf of the pensioners of the bank, their gratitude to the board for the generous treatment they have received.

I also take this opportunity of expressing the satisfaction of the executive with the manner in which the women clerks of the bank have discharged their duties.

I have to thank Dr Knight and Mr Hanna for their very kind references to myself.

Mr Watson has mentioned that years ago he marked me out for rapid promotion. I can only say that I hope his foresight will prove of advantage to the bank.

The Chairman thanked the shareholders for their patient hearing of his somewhat lengthy address, and the meeting then concluded.

DUNLOP RUBBER COMPANY, LIMITED.

CAPITAL INCREASED TO £20,000,000.

BONUS ISSUE TO SHAREHOLDERS.

An extraordinary general meeting of the Dunlop Rubber Company, Limited, was held, on the 10th instant, at 14 Regent street, London, for the purpose of considering resolutions (1) increasing the capital to £20,000,000 by the creation of 12,500,000 additional £1 shares, and (2) to capitalise £7,500,000 and pay a bonus of £3 free of income-tax to the ordinary shareholders by the allotment of £1 shares to that amount. Mr A. L. Ormrod presiding.

In the course of his speech in moving the resolutions, the Chairman said: The first resolution will provide the company with authorised capital more than sufficient for the purposes indicated in the second resolution, and on the second resolution being passed, which I have no reason to doubt will be welcomed by you, the first resolution will have left the company with a balance of 5,000,000 ordinary shares in hand and available for issue.

At the date of the last balance-sheet you were left with a reserve fund in hand of £300,000, and after giving effect to the dividends agreed at our last shareholders' meeting, the sum of £400,000 was carried forward. This sum was subject to the provision for excess profits duty in respect of the year ended August 31, 1919. Since that date it is hardly necessary to say the company has not been idle. It is impossible to give you, yet, the exact figures of the profits for the year ended August 31, 1920, as the stocktaking and accountancy figures will not be in my hands for some time yet. The net profit shown for August 31, 1919, was £1,368,000, after providing for excess profits duty up to August 31, 1918. The net profit for the year ended August 31, 1920, should not be less than £2,500,000, subject to excess profits duty. The 1,000,000 shares issued since the conclusion of the last balance-sheet brought us in a premium of £7,000,000, less expenses. This premium has been added to the reserve, and by resolution of the board the necessary amount has been transferred to it from the carry forward, making the reserve fund £7,500,000 to be forthwith capitalised on the passing of the second resolution, and distributed to you, the ordinary shareholders. The issued ordinary capital will then be £10,000,000. For the time being this will deplete your reserve fund, but I will point out later on how it will be immediately built up again to a substantial amount.

The holders of the ordinary shares will, on the passing of these resolutions, hold four shares for each one you previously held, and the four shares should represent a very considerable premium, as they do not, by any means, exhaust the real capital value of your assets.

You will recollect that I stated, not long after I succeeded to the position of chairman, that in my personal opinion you would have, in assets and reserves, an amount of not less than £14,000,000, to be provided for under any future scheme of recapitalisation. A committee, of which I was not a member, was also appointed by the board to go into and report on the matter with the benefit of the experts' experience and advice. The decision of that committee was made known to you immediately. It is satisfactory to me, and must be so to you, to know that the information laid before the committee and its advisers more than fully bore out my own personal opinion expressed to you.

Of the 12,500,000 additional ordinary shares which are being created, you who are ordinary shareholders will get 7,500,000 forthwith allotted to you as bonus, or, as I should prefer to put it, without further payment, and these shares will be entitled to the same dividend that may, in due course, be declared on the 2,500,000 shares in respect of the year ended August 31st last. At this time of day it should be unnecessary for me to state that the preference shareholders cannot participate in this bonus.

Now, as to the 5,000,000 of ordinary capital, which will remain after the full authorisation and allocation of 7,500,000. On the passing of these resolutions, we intend forthwith to issue as a right to the ordinary shareholders, who will then hold 10,000,000 ordinary shares, 3,000,000 shares at the price of £1 10s per share, or in the proportion of three new shares for every ten held. At the price of the shares ruling to-day, this is equivalent to a further bonus. The issue will be guaranteed on very reasonable terms, viz., 1s 3d per share and 15,000 guineas for expenses, or as near as may be 4½ per cent. It will provide the company with £4,500,000 more money, less expenses, of which amount £3,000,000 will be represented by nominal capital and the remainder of £1,500,000, less expenses, will be available as a further reserve fund. Payment for the shares will be spread over a period of approximately six months, the first payment being of 7s 6d per share, and due on acceptance. Of this amount 5s per share will be premium and 2s 6d per share capital. The second payment due on allotment will also be 7s 6d similarly apportioned, and the third and fourth payments will be each of 7s 6d per share, payable on November 30, 1920, and February 28, 1921. Any holder who does not wish to take up his right to his proportionate allotment will have the opportunity of renunciation.

There remains a balance of 2,000,000 shares in hand. My own impression is that our capital commitments to be provided for by share issues are now ended. This is not only my impression, but it is also my earnest intention, and the 2,000,000 shares, if not so required, will become available, as the occasion may demand, for a further allocation of later reserves. Our finance should, in future, be confined within our own organisation.

When I addressed you on December 1st last year, I described the steps which were then being taken as bold legislation for the future. They were, indeed, hardly bold enough. I have verbally described the extensions which are proceeding at Fort Dunlop and elsewhere, and you have also seen photographs of them. By the end of 1921 we should attain a capacity there of a weekly output of about two-and-a-half times our present production.

At our meeting in February last, when nearly six months of our trading year had gone by, I told you our business showed an increase of over 30 per cent., and that the rate of increase had been retarded by the difficulty of obtaining plant and machinery. For the full year ended August 31st last, the business done should show a larger increase, because for the eleven months to the end of July there was an increase of over 38 per cent., so that for the last five months we have progressed in considerably greater proportion. I would remind you that by the end of 1921, when our capacity will be so much greater than it is at present, the buildings, but not the machinery, which we shall own will be sufficient to provide for an output of five times what we are doing at present. Roughly, by the end of our year 1921 the permanent officials of the Dunlop Rubber Company have advised us to prepare for the provision of a balance of nearly £5,500,000.

Covered in the above-mentioned figure is all the expenditure they deem necessary for the requirements of the increasd trade capacity I have set out. We are going to raise now £4,500,000. Assuming the whole £5,500,000 is required, it would foreshadow an approximate and estimated increase in our balance-sheet, on the two years from August 31, 1919, to August 31, 1921, of £2,900,000 in land, buildings, plant, tools, furniture, &c.; in debtors and stocks, £4,300,000; in investments, nearly £7,000,000.

This present provision is intended to finally close down the Dunlop capital account, and to leave the company in a position to be self-contained as regards its finance, and to make no further issue for the purpose of bringing fresh cash into the business, unless something, at present entirely outside our outlook, should arise. The approximate figures I gave you foreshadows an increase in assets of over £14,000,000 by August, 1921. It is unlikely that all will have been dealt with at that date exactly as foreshadowed, certainly the money for them will not all have been paid away.

The profits of last year, subject to some reasonable but substantial deduction for reserve, should be available for distribution in dividends, excess profits duty, the new corporation tax, or other purposes, and any surplus retained increases the amount available for capital purposes. I understand the new corporation tax will entail a deduction, after excess profits duty, in our case of 5 per cent.

of the amount available for apportionment by the board and distribution to the ordinary shareholders.

Now, on the other hand, I will ask you to look at what we have got, and what has to produce our revenue. I can tell you at once that the earnings of Dunlop Plantations, as in previous years, are not included in the approximate figure of £2,500,000 I have led you to expect of the profits to August 31, 1920. Their books now close at a different date, and the profits for eight months to the time they were made up exceeded those for the previous year, and will be left there for internal use, as usual.

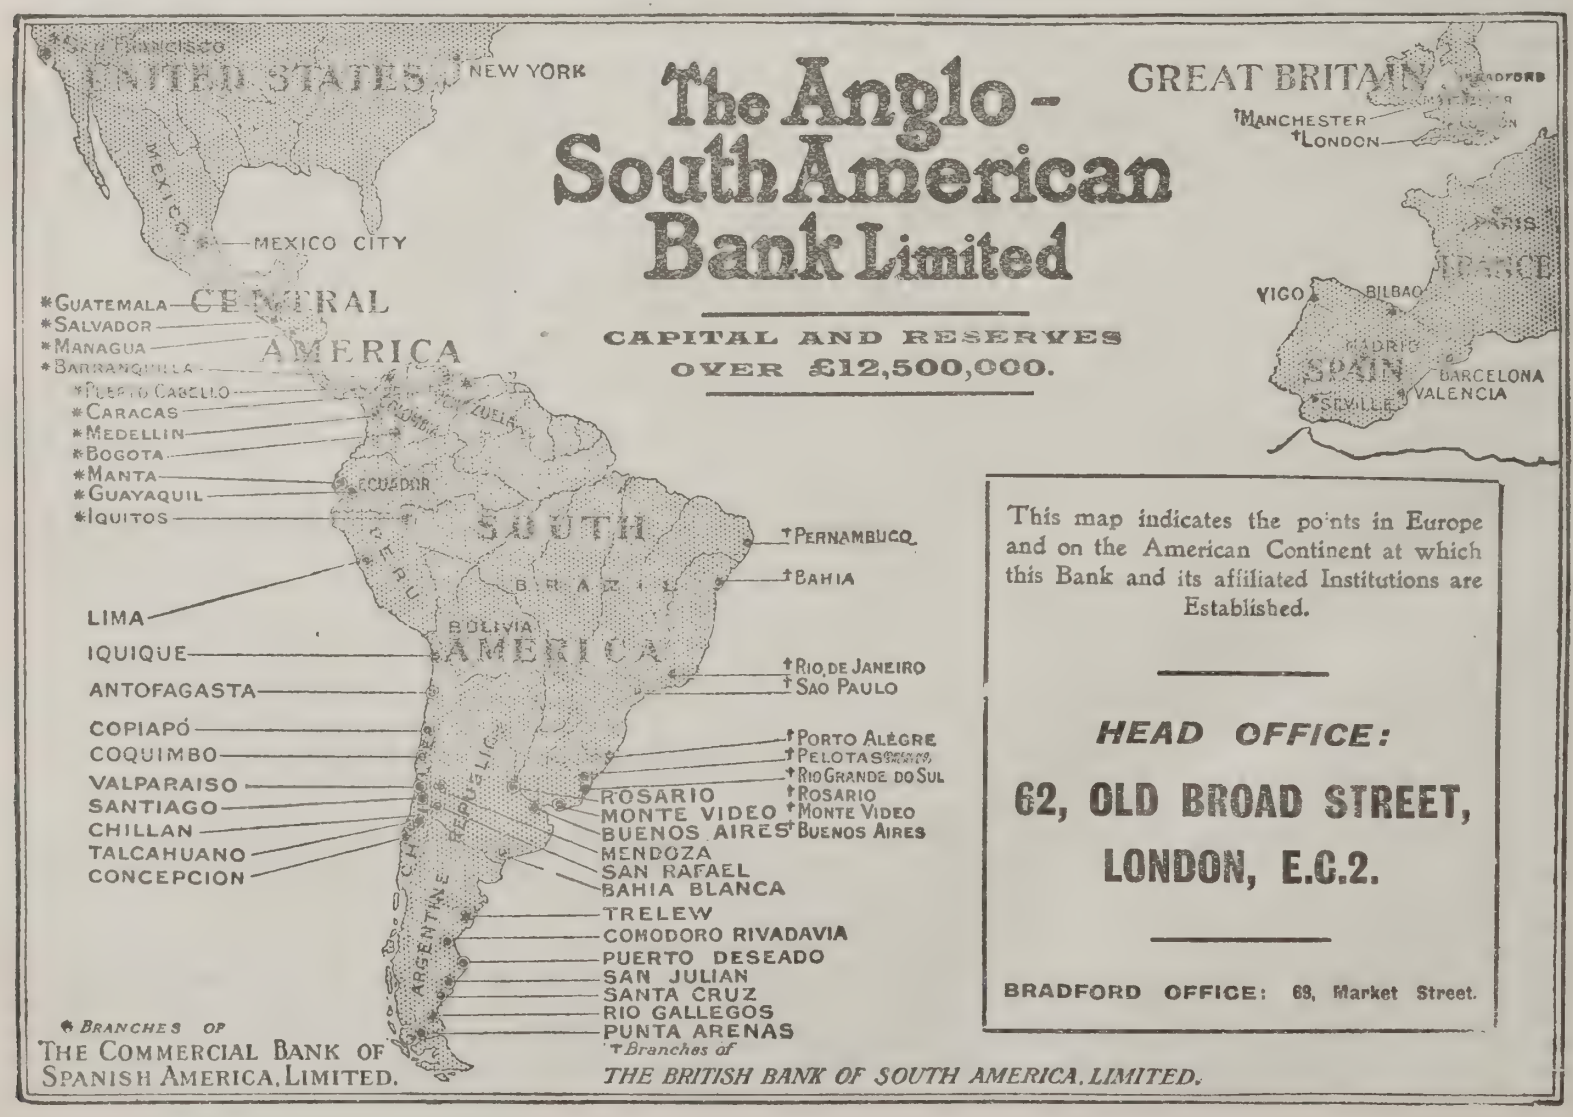
FORT DUNLOP.

In my address to the shareholders on Monday, December 1, 1919, I pointed out that the Manor and Para Mills, which up to a recent date had been our sole means of supply, were, by reason of our ever-growing business, becoming congested and out of date, and to meet the situation a new and model plant was being erected at Fort Dunlop with a capacity intended to manufacture the whole of the company's requirements, and still leave us sufficient land for future extensions. Since the Armistice your directors have proceeded with great energy to complete the policy of centralising the whole of the company's manufacturing works at Fort Dunlop. As regards the French company, the new factory will be working by July, 1921, and the output of tyres in France will then be more than the entire output of the Dunlop Company in 1915. The increase in sales in France has been steady and continuous, the turn over in 1920 showing an increase of 80 per cent. The French business will be self-supporting as regards capital in the future. Then with regard to the subsidiary companies all these show extraordinary promise and a continually increasing trade, and have been the means of creating for Dunlop a world-wide name and reputation. Developments in these companies are sure to follow on the great progress of the Mother Country. Events in connection with the new Dunlop America Company, in which we have a 25 per cent. interest in the ordinary shares, are proceeding satisfactorily. There is no doubt we have a very sound and profitable investment there.

Regarding the Dunlop Plantations and Rubber Estates, these have been surveyed, and the planted area is found to be 37,565 acres. To this must be added the purchase of 7,000 acres of planted rubber. By the end of the year we expect the planted area to be brought up to 47,000 acres. The output is estimated this year at 6½ million lbs. Without further purchases or planting to December 31, 1924, we should have a yearly average of over 9,000,000 lbs, and for the three years to December 31, 1927, a yearly average of over 15,000,000 lbs. The new mill for producing 80,000 lbs of cotton material for tyres is progressing rapidly, and will find work for 3,000 workpeople, who will produce weekly at least 150 miles of cloth and canvas exclusively for this company's requirements. In addition the company own the Nile Ross and J. Hoyle's, which provide employment for a further 2,200 workpeople, making roundly 5,200 workers employed in producing cotton fabric. The value of the mills to this company is incalculable. You must be pretty well satisfied with the value of your assets, and those who have the opportunity of subscribing at 30s a share will get a cheap share. You must also be more than satisfied with the record of profit earned. Your present profit is more than sufficient for a large return on the whole preference and ordinary capital issued, and now to be issued and reckoned as fully-paid up. I regard the direct capital account as now closed. By the end of the financial year 1921 the company will have approached the completion of its programme, and with its other developments in 1922 should be still more secure in the goodwill of its name, and the shareholders should reap a profitable harvest. It will be second to none in the motor tyre industry.

Sir Henry Dalziel seconded the resolutions, and they were carried unanimously.

A vote of thanks to the chairman and the directors terminated the proceedings.



CHEMBONG MALAY RUBBER COMPANY (1920), LIMITED.

CHAIRMAN OPTIMISTIC AS TO PROSPECTS.

The statutory meeting of the Chembong Malay Rubber Company (1920), Limited, was held, on the 7th instant, at the offices of the company, 5 Fenchurch street, London, Mr E. G. Money (the chairman) presiding.

The representative of the secretaries (Messrs Boustead Brothers) having read the notice convening the meeting and the report of the auditors,

The Chairman, in the course of his remarks, said: When the present company was formed the arrangement was that the old company should sell to the present company its estates only. When this company was formed an issue of 2,500,000 shares of 2s each was made, of which 2,125,000 have been allotted as fully paid to the liquidator of the old company, by whom they will be handed over to the shareholders of the old company in proportion and numbers to which they are entitled. The balance of 375,000 shares, representing the sum of £37,500, was offered for subscription at par, and preference in the issue of these shares was given to the shareholders of the old company. The accounts before you will show that the sum received so far in respect of this issue is £28,026. A certain portion of the issue was reserved by the board for the shareholders of the old company who were resident abroad, in order that they might have

a fair opportunity to participate in the issue. The shares applied for by such foreign residents, which still remain to be allotted, number 18,922, so that it seems probable that of the 375,000 shares offered the amount which will remain unapplied for will be some thing less than 50,000 shares, and it is, of course, within the province of the board to issue these shares at any subsequent time and at such price as, in their opinion, circumstances may justify and the requirements of the company may necessitate. The estates which have been taken over by this company are both very well known in the Federated Malay States. The Chembong estate has always had the reputation of being a very first-class property. Some years ago, as you know, we decided to embark on the development of a second estate. I explained to the shareholders at that time our reason for this policy, and we made a purchase of land not very far distant from the Chembong estate, and proceeded to develop it. This will ultimately form a property of some 1,000 acres, of which about 500 acres are now planted, while a further area of 189 acres is in hand. I consider from the reports we have received of the development of this property that it will prove to be a most valuable acquisition. I am of opinion that the prospects of the company are excellent, and I consider that its shares, at the present capitalisation, offer the prospect of a substantial return in the way of dividends, as well as of steadily increasing appreciation in capital value.

No questions were asked, and the meeting then terminated.

BUKIT SELANGOR RUBBER ESTATES (1920), LIMITED.

DIVIDEND PROSPECTS FROM THE OLD COMPANY.

The statutory meeting of the Bukit Selangor Rubber Estates (1920), Limited, was held on the 7th instant, at 5 Fenchurch street, London, Mr E. G. Money (the chairman) presiding.

The representative of the secretaries (Messrs Boustead Brothers) read the notice convening the meeting.

The Chairman said that the total receipts in respect of shares applied for, with the exception of a small sum derived from interest, amounted to £26,928 10s 6d. The number of shares offered for subscription was 492,987, and the number applied for and so far allotted was 267,192, leaving a balance of 225,795 shares. There could be no possible doubt that the shares were exceedingly good value at par, and that under more normal conditions they would stand and be dealt in at a premium. The amount received so far was ample for the present requirements of the company, and it need not cause them any concern if the remaining shares were held by the company for the time being. It might be found practicable to issue these shares at a later date at a premium. The development and working of the company's estates continued to be carried on in a very efficient and economical manner. With regard to the Java Selangor Estate, the Government had now decided to carry out a scheme of drainage which would have a very beneficial effect on that property, inasmuch as it would make it practicable for them to plant up at a moderate cost the greater part of the remaining area, which was at present in jungle—namely, 329 acres. When this was done they would have some 800 acres under cultivation on this property. With regard to the new estate, Tanjong Pasir, as the work of opening up this property proceeded it was becoming more and more evident that they had in this estate a property of very great promise indeed; in fact, the directors were advised by the Visiting Agent that it might prove to be the most valuable of the company's three estates. As to the future of the company's estates, he could only say that he took a very optimistic view. Those who cared to look ahead a little had no grounds whatever for pessimism with regard to the future of the rubber industry.

Mr C. F. Burton, the liquidator of the old company, stated that he could not say what amount would be divisible per share. He had come to the conclusion, however, that the shareholders would probably receive a dividend of from 20 per cent. to 25 per cent., but until the cost of stamp duty on the transfer of the estates was definitely ascertained, he could only give this estimate with reserve.

The Chairman expressed the opinion that the liquidator would be able to make his distribution to the shareholders within a comparatively short period.

A vote of thanks to the chairman and directors concluded the proceedings.

MERGUI CROWN RUBBER ESTATES, LIMITED.

THE RUPEE EXCHANGE AND FORWARD SALES.

The seventh ordinary general meeting of the Mergui Crown Rubber Estates, Limited, was held on the 8th inst. at 3 and 4 Great Winchester street, London.

The secretary (Mr R. Lawrence Spicer, F.C.I.S.) read the notice convening the meeting and the auditors' report.

Mr John D. W. Wilson (the chairman), who presided, said that two interim dividends of 7½ per cent. each, 15 per cent. in all, had been paid, leaving a balance of £9,840, which the board recommended should be carried forward. They much regretted that they could not recommend any final dividend for the year, owing to the rupee exchange. In view, however, of the very favourable forward contracts entered into for this and next year, the directors had declared an interim dividend for 1920-21 of 5 per cent. (less income-tax), payable 30th inst. The anticipated loss in exchange, to which he referred last year as their greatest drawback, had, unfortunately, been realised, and was practically the sole cause of the reduction in profits of £2,186 compared with the previous year. As the Indian Government had now fixed the par value of the rupee at 2s, there was every hope of more stability in exchange in the near future, and the directors considered that the prospects of the current financial year were much more promising. The manager's estimate for the current financial year was 700,000 lbs, which should be realised at an estimated all-in cost of, they hoped, 1s 1d to 1s 2d per lb. The outstanding forward contracts at April 1st were: 45 tons April-December, at 2s 1d per lb, 12 tons July-December at 2s 1¼d per lb, and they had since sold 120 tons January-December, 1921, at 2s 6d per lb, and 120 tons January-December, 1921, at 2s 5¼d per lb.

To assist in covering the expenditure on immature rubber and to meet the annual payments to the Government of India for some time ahead, and thereby enable the board to apply more of the revenue for stabilising and increasing the dividends, the directors had under consideration the issuing of the £10,000 balance of capital at a moderate premium, due notice of which would be given to the shareholders. With this sum in hand, sufficient funds would be provided to bring the whole of the immature areas into bearing, and contribute the bulk of the payments to Government against the company's lease for the next three years. By that time they would have about 2,560 acres in bearing, as against the present 1,946 acres, and be in a much better position to provide for the beforementioned payments and to maintain dividends. The condition of the estate was very satisfactory, and he thought they might look forward with confidence to the future of the company. In conclusion, he moved the adoption of the report and accounts.

Mr F. S. Arbuthnot seconded the motion, which was unanimously carried.

FOREIGN BANK RETURNS.

Owing to variations in rates of exchange, it is our intention to show in future the position of the undermentioned banks in their national currency. The position of those banks which are still shown in sterling we hope in the course of the next few weeks to give in the currency of their own country.

† Rates lowered ½% on Jan. 2, 1918, and lowered ½% on Feb. 14, 1918, but raised ½% on Oct. 6, 1919, and ½% on Nov. 6, 1919, and 1% to 5% on April 15, 1920.
‖ Lowered from 3½% to 3% on June 5, 1918, but was raised to 3½% on July 31, 1919, to 3¾% on Oct. 6, 1919, to 4¼% on Nov. 6, 1919, and 5¼% on April 15, 1920.
* Changed from 4¾% to 4% on Dec. 27, 1917, and from 4% to 3½% on Feb. 14, 1918, at which rate they remained until they were suspended on May 31, 1919. Daily sales resumed on July 14, 1919, when two months' bills were also introduced. The daily sales of two months' bills were stopped on August 15, 1919. Rates commenced on July 14, 1919, as follows:—Two months, 3⅝% (July 14 to August 5, 1919, period of daily sales); three months, 3½%; six months, 4%. On October, 6, 1919, the three months' Treasury bill rate was raised 1% to 4½%, and six months 1% to 5%. On November 7, 1919, the three months' rate was raised from 4⅝% to 5½%, and the six months' rate from 5% to 5½%. On March 19, 1920, daily sales of six months' Treasury bills at 5½% were replaced by twelve months' Treasury bills at 5½%. On April 14, 1920, three and twelve months' Treasury bill rates were raised from 5½% to 6½%. Sales of twelve months' Treasury bills were suspended on April 29, 1920.

BULLION.

The gold movements to or from the Bank of England are no longer announced. For the week ended September 8, 1920, the stock of coin and bullion showed a decrease of £4,513 compared with the previous return.

IMPORTS AND EXPORTS OF GOLD.

Gold Imported into the United Kingdom. Countries from which Consigned.	Week Ended Sept. 1, 1920.	Gold Exported from the United Kingdom. Countries to which Exported.	Week Ended Sept. 1, 1920.
	£		£
Gold Coast	48,710	Norway	220
British South Africa	837,077	France	1,320
		Switzerland	83,500
		Italy	1,780
		Gold Coast	1,718
		United States	825,500
Total value of imports of gold	885,787	Total declared value of exports registered in the week	914,038

Messrs. Samuel Montagu and Co. write, on September 9th, as follows :—"Gold : The Bank of England gold reserve against notes is £121,555,210—a slight increase of £2,790 as compared with that of last week. A fair amount of gold came into the market this week, and was taken for the United States of America, excepting a small quantity acquired for India. We understand that $1,800,000 in gold has been received in New York from London, and of the gold newly arrived here from South Africa, $5,000,000 has been engaged for shipment, and is due shortly. Further, $40,000,000 or more is expected to arrive from France. We are informed from Bombay, under date of August 20th last, that sovereigns were quoted at Rs. 14-12, and the disparity which at one time existed between sovereigns and bullion had now disappeared, owing to large arrivals of the former. Silver : The market during the week has been quiet, and the absence of business rather marked. Following our last advices, some Indian bear covering, coupled with a little inquiry from China, took effect upon a sensitive market, and caused quotations to rise daily until 60⅜d for cash and 60d for forward delivery were reached on the 6th inst. Since them, however, a downward movement has been steadily maintained, until to-day we returned to 58½d and 58⅛d, the same prices as those which were quoted a week ago. News to hand this week from China gives disquieting reports of the harvest, which, apparently, has been extremely bad in that country. We understand that the warehouses here of China merchants are well stocked, and consequently very little is expected from China in the way of exports. It would appear, therefore, that unless for speculative purposes, inquiry for silver on China account is not likely to press hardly on the market.

INDIAN CURRENCY RETURNS.

(In Lacs of Rupees.)

	Aug. 15, 1920.	Aug. 22, 1920.	Aug. 31, 1920.

Gold coin and bullion out of India	..	..	..
Securities (Indian Government)	4,733	4,733	4,733
Securities (British Government)	2,153	2,153	2,153

No rupees were coined during the week ending 31st ult. The *Times* correspondent at Simla, under date of September 2nd, states that a Bill has been introduced into the Legislative Council prescribing the permanent constitution of a paper currency reserve. It is proposed that the minimum of metallic reserve should be 50 per cent. of the total reserve of Indian securities held, and be limited to 20 crores. Sterling securities held should be confined to securities issued by the United Kingdom, and maturing within one year of purchase. Pending the establishment of a permanent constitution, it is proposed to limit the amount of securities held to 85 crores, instead of 120 crores, as now authorised. The stock in Shanghai on the 4th inst. consisted of about 33,800,000 ozs in sycee, 22,500,000 dollars, as compared with about 35,400,000 ozs in sycee, 22,000,000 dollars, and 250 bars of silver on the 28th ult. The Shanghai exchange is quoted at 5s 10d the tael."

GOLD AND SILVER PRICES.

NOTICES.

The London Joint City and Midland Bank, Limited, have opened a new branch at 4 High street, Ledbury, under the management of Mr John F. Rennie. It is also announced that offices have been opened at Bungalow Town, Shoreham-by-Sea, (sub to Brighton), at Kirkbride (sub to Station road, Silloth, Cumberland), and at 7 Clarence street, Haverton Hill (sub to 47 High street, Stockton-on-Tees.

The Anglo-Egyptian Bank, Limited, have opened a branch at Assiut.

The Banque Francaise et Italienne Pour L'Amerique Du Sud, whose head office is in Paris, and who have branches in most South American countries, have just decided to open offices also at Montevideo, Rosario de Santa Fè, and in the town of Rio Grande do Sul, in Brazil.

Reports and Notices.

GOVERNMENT STOCKS, &c.

3 PER CENT. DIPLOMATIC DEBT OF VENEZUELA, 1905.—The Council of Foreign Bondholders notify the receipt of a sight draft for £4,390 15s 4½d, being the moiety of the third fortnightly instalment of the Debt Service payable to the Council in respect of the half-year ending December 31, 1920.

CONSOLIDATED EXTERNAL DEBT OF COLOMBIA.—The Council of Foreign Bondholders have received the September instalment of the Debt Service in respect of the half-year ending December 31, 1920.

BANKS.

CENTRAL BANK OF INDIA, LIMITED.—Head office, Bombay. Capital issued, Rs.1,00,00,000, of which Rs.49,99,000 are paid up. Net profit for half-year ended June 30, 1920, are stated to be Rs.8,74,466. Reserve takes Rs.5,00,000; dividend at rate of 14 per cent., free of income-tax, absorbs Rs.3,50,000, and Rs.24,467,000 are carried forward. The reserve fund now stands at Rs.19 lacs. Current accounts and fixed deposits, Rs.11,36,25,000.

MISCELLANEOUS.

LEEDS AND LIVERPOOL CANAL.—The report for the half-year ended June 30, 1920, states that, including the estimated amount receivable from the Government, receipts were £158,931, less expenditure £139,279, net receipts £19,652, balance brought from last account £2,360, together £22,012, less interest on debenture stock, loans, &c., £7,193, rent of Lancaster Canal £3,537, subsidences and special expenditure account £2,500, depreciation on War Loan, 1929-47, £100, leaving a balance to be carried forward of £8,681.

PEKIN SYNDICATE.—The report for the year ended June 30, 1919, states that receipts amounted to £90,675, comprising interest on Chinese bonds and sundry investments, dividend on shares, &c. The expenditure in London, including income-tax, was £17,156; in Paris, £4,037; and in China, £22,138. French fiscal dues in respect of Shansi shares amounted to £787. The credit balance on profit and loss account is £46,557, which the directors propose should be carried forward. The developments now in hand should within the next few months place the production of the collieries on a more satisfactory basis both with regard to quality of output and cost. The output amounted to 550,547 tons against 592,842 tons of the previous year, the decrease being due to abnormal conditions. Sales to the Fu Chung Corporation amounted to 460,524 tons, as against 471,993 tons for the previous year. The syndicate's proportion of the profits made by the corporation for 1919 amounted to £13,593.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Weather conditions have remained favourable for harvesting operations, and the wheat crop is being rapidly secured. In the South and East the ingathering is almost completed, and farmers are busily engaged preparing the ground for the new seedbed. The result of threshings so far, happily, shows little, if any, deterioration in quality, and well-matured wheats are milling satisfactorily. Fair supplies of the new crop are now arriving at the chief distributing centres, and readily absorbed at 95s per qr 504 lbs for all good-conditioned lots. Supplies of imported were adequate for requirements, and moved off steadily at regulation prices, comprising No. 1 Northern Manitoba 97s ex ship per 480 lbs, No. 2 mixed winter 97s 4½d ex ship, and Australian 104s 9d landed per 496 lbs. Flour :—There is a good demand for all grades, and with small arrivals of country made, London bakers have to depend on town-made G.R., which remains at 63s 6d per sack 280 lbs ex mill, while small quantities of imported were released and readily taken up at 64s to 65s 9d ex store. Barley in moderate request, while held for fully steady rates, supplies being in manageable compass. New English malting ruled at 80s to 97s 6d, and grinding ditto 78s to 80s per 448 lbs, Californian ex ship 100s to 101s 448 lbs, No. 4 Canada Western ex ship 74s, ditto landed 75s 6d to 76s, American feed, landed, 73s, Canada ditto 75s, ditto ex ship 73s, Danube ex ship 70s to 71s, Plate ex ship 73s 6d, and Morocco 81s landed, all per 400 lbs, on c.i.f. terms. No sales were reported in Canadian, but two part cargoes of Danube/Bessarabian/Kustendje, September-October, sold at 70s. Maize firm, with an improved consumptive demand, and prices moved upwards in sympathy with higher c.i.f. rates and advancing Argentine freights. Plate old ex ship 70s, ditto landed 72s, ditto new ex ship 74s, and landed 75s 6d. In the forward market prices advanced sharply, and steamer cargoes of Plate expected to load first half September were dealt in at 69s 3d to 70s, September-October 68s to 69s 6d, a sailer of ditto (bags) loading 70s, Danube/Galatz/Foxanian/Bessarabian, September-October, 69s 6d to 72s, and white flat South African early September loading at 80s per 480 lbs. Parcels of Plate loading changed hands at 68s 6d to 70s 9d, August-September 66s 3d, 68s 3d, 69s 6d, September-October 65s to 68s 3d per 480 lbs. Oats firmly held with a fair inquiry. English new whites 62s to 65s, old 64s to 68s, grey new 56s to 59s, and blacks 58s to 62s per 336 lbs. Of imported, River Plate quoted 51s 6d ex ship, and 53s to 54s landed, Canadian 66s, and Norwegian 67s per 320 lbs, landed terms. Forward market opened firm, but subsequently ruled quieter, closing with an easier tone. Plate, f.a.q., shipping, sold 40s 9d to 49s 6d, August-September 48s 6d to 47s 9d and 49s 6d, September-October 48s 6d to 49s 3d, October-November 49s to 50s per 320 lbs. Peas quiet. English blues 100s to 105s, maples 110s to 125s per 504 lbs. Tasmanian blue, 25s cwt. Beans steady, but generally slow of sale. New English 90s to 105s per 504 lbs. Butter £30 to £32, Rangoon £18 10s to £19, and Chinese horse beans £18 to £18 15s per ton. Oatmeal firm but quiet. Scottish £40 to £42, American £34 to £35, pinhead £36 to £37, flaked oats £39 to £41, and oat flour £44 per ton. Homeward grain freights have ruled firmer, especially for early loading, with chartering on a fair scale. The River Plate has advanced to 105s, September-October, and 102s 6d, October 15th-November, for maize up-river loading to U.K./Continent, with even 5s more indicated respectively.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1919-20, contrasted with 1918-19, 1917-18, and 1916-17.—(Particulars of imports of wheat and flour temporarily discontinued) :—

THE IRON AND COAL TRADES.

Our Sheffield correspondent writes :—Business in high-grade special and tool steels is in a state of comparative collapse, as practically nothing of moment has been booked for a month. The falling off is general, as it applies to all markets and the home country alike. The depression is attributed to want of confidence at home, the state of the Continental exchanges, and to Belgian and German competition. Prices of Sheffield products are prohibitive to the majority of users. While booking very little, makers of open-hearth steel continue to be well employed, as there is no surplus production. Rolling mills, forges, and foundries are busy. At the same time forward buying is tapering

off in all directions. In consequence of the development of competition from Belgium, makers have decided to reduce soft basic steel billets £2 per ton and soft wire rods £5 per ton. Acid steel, however, remains as before. Prices of manufactured soft steel have also been lowered. Finished iron and steel of the better qualities are advanced 20s. to cover the increased railway rates. The demand for pig-iron has fallen very flat. Buyers are holding off, and as a result better deliveries can be given. Less has been exported this month. Extreme slackness is being experienced in twist drills and cutters. Producers have been making for stock for a long period, and if things do not improve shortly they will be under the necessity of reducing their staffs of workmen. Unemployment in the city is increasing, and the industrial outlook for the winter is regarded as gloomy. Trade is still brisk in saws, files, and edge and joiners' tools, as well as engineers' hammers, spanners, and light hand tools, the production of which is rather on the short side. The bulk of the output of manufacturing coal is available for home consumption, and users have been specifying freely this week. Production in South Yorkshire was considerably interfered with by Doncaster races, which were attended by many thousands of colliers. Stocks at works are now large and considered ample. Orders for house coal are simply pouring into merchants' offices, far exceeding the means of execution. Prices current per ton at pits are:—Best Blythe steams, 150s to 160s (export); best South Yorkshire ditto, 33s 2d to 33s 8d; Derbyshire ditto, 32s 8d to 33s 2d; steam cobbles and nuts, 31s 8d to 32s 2d; branch, 37s 2d to 37s 8d; best Silkstone, 33s 8d to 34s 8d.

———

Our Glasgow correspondent (writing on Thursday) says:—Labour troubles of one kind and another continue to interfere with the smooth working of commercial and industrial business in the West of Scotland, and yet a large volume of constructive operations is in course of execution in all departments of the steel and iron trades. In the last-named relation an increasing amount of export dealing is proceeding, and if raw material were available the total handled would be much greater, as the inquiries from foreign markets are heavy and pressing. South Africa, the Far East, and the Australian colonies are eager buyers of Scotch foundry irons. Home demand is also active, and it appears more clearly, from the greater anxiety shown to obtain deliveries, that consumtrs have eaten too deeply into their reserve stocks. Great activity reigns at the several steel works, where the mills are rolling continuously (night and day). Clyde shipbuilders are licking-up an enormous tonnage in ship plates and angles, and boilermakers are absorbing all sizes of plates with avidity. It is stated that the plate orders on customers' books will keep machinery going full for the rest of the year. Steel producers are still declining prompt engagements, notwithstanding the attractiveness of specifications. Light sections meet with a ready market, thanks to the big building contracts on hand, which give promise of expanding in the near future. Black sheet makers are still seriously behind with deliveries, and are refusing export orders. Steel and iron bar makers remain exceedingly busy, and report that they are well provided for for months to come. In steel hoops and strips the turnover is described as well-nigh unprecedented, and the like state applies to the manufacture of bolts, nuts, and rivets. Nails are on the scarce side, producing powers proving unequal to needs. South America is asking for substantial lots of galvanised sheets. Castings are in active request, which favours and reflects the position in machinery engineering. Altogether trade conditions are in a satisfactory way—were it not for the uncertainty surrounding the future course of events in the coal trade. Authorities here are hopeful that the trouble will pass.

———

Our Middlesbro' correspondent's report, dated September 9th, is as follows:—Pig-iron: The market is firm, but very little business doing owing to the uncertainty about a coal strike. Cleveland No. 3 and No. 4 foundry G.M.B. is 225s per ton, and East Coast mixed numbers hematite 260s, both for home consumption, 5s per ton more for export to Allied countries. Manufactured iron and steel: Steel prices have this week been raised generally £1 per ton. A good demand continues. Steel ship plates (home), £24 10s; steel ship angles, £24; iron ship angles, £30 15s; iron bars, £30; steel rails, £25 net. Iron ore: There are sellers of best Rubio at 48s, but business is quiet.

THE COTTON TRADE.

MANCHESTER, September 9.

Spinners and manufacturers throughout the market have experienced another unsatisfactory week, and in several directions further ground has been lost. The downward movement in raw cotton rates has been checked, but traders are nervous as to the future level of values. There is apprehension with regard to the labour situation, and financial stringency prevents speculative operations. Miscellaneous sales have occurred in piece goods for India, the inquiry being substantial, but most of the offers have been too low. Rather discouraging advices have been received from China. The minor outlets East and West have given very little support. More manufacturers are being compelled to restrict output on a larger scale. A dull feeling has prevailed in American and Egyptian yarns, and prices are giving way owing to the absence of fresh contracts. More producers are in favour of organised short time.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—Business in all departments of the wool textile industry is quieter than it has been for several months past. It was hoped that the improved demand for wool at the last series of Colonial wool sales in London would have the effect of stimulating the demand for tops, yarns, and pieces, but so far this has not been realised. Many topmakers advanced their quotations for tops in sympathy with the enhanced value of merino wool, but few have found it possible to do business on the higher level, and to-day prices are down to where they were three weeks ago. Good average 64's tops are quoted around 7s 6d, but some lots can be bought at a lower figure. There is very little new business in yarns, and quotations still show irregularity. An average market price for 2-48's out of 64's is about 12s 6d to 13s per lb. The outlook in the piece trade is very gloomy, as there is practically no new business coming through. Short time is already being worked in various departments of the trade, and it is possible that throughout the industry

VICTORY BONDS
purchased now will not be available for the payment of Death Duties for their full face value until six months have elapsed. The
VICTORY BOND POLICIES
issued by the
NATIONAL PROVIDENT INSTITUTION
provide for the payment of the full amount of the face value of the bond from the date of issue.
Particulars post free on application to—

Telephone: 1773 Avenue.

organised short time will come into operation in the not distant future.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

After three months of dead trade, some recovery in prices was noted during the series that have just closed in London. For a week or two previously, the impression had been gaining ground that owing to its scarcity since April, really good merino wool would appreciate in value when it was again offered, though the old days, when 64's warp tops were costing 13s., were not expected to return. The series have proved that this estimate of events was well founded, and all really good wool appreciated 10 per cent. or so in value. What was far more surprising, however, was the big advance in what Bradford regards as average wools, these being unobtainable under about 88d clean scoured for average 64's to 70's, whereas a month previously one could buy them at 10d to 15d per clean lb less. There has been an appreciation, too, in fine crossbred wools, both greasy, scoured, and sliped, the latter being particularly wanted by woollen manufacturers, but in the lower qualities there has been no change whatever.

This summary of the wool market for the past fortnight is all the more remarkable when one considers that in Bradford and the West Riding in general there appears to be no justification for the advance. Piece merchants are still finding things very slow, indeed, and most of them are concerned with reducing their stocks rather than placing further orders. Manufacturers, and also worsted spinners, are still continuing the long wail about absence of business that they have experienced for the past three months. Those who have bought dear raw material are now in two minds whether to sell out their product at a loss, the selling price being based on to-day's values, or to hold for an improvement in the market. This last rise in London has helped them a little, but has been by no means large enough to lift them out of their difficulties entirely.

It is undeniable that the chief advance in wool is due to Swiss, French, and American competition, and there appears to be a few Continental mills, engaged in manufacturing speciality goods from particularly fine wool, who have considerable orders, and who can afford big prices for the raw material. A big demand from Central Europe still seems as far away as ever, and it is known that a few speciality manufacturers cannot absorb all the wool that is coming forward. For this reason the recent advance in raw wool is looked upon by practically everybody in the British trade as merely temporary, and for the next few months, on the whole, the tendency of wool prices is expected to be downwards.

It was remarkable that on the last two days of the sales prices showed some falling off in the qualities usually taken by Bradford. No doubt this was due to the possibility of a coal strike having come much nearer. On the occasion of the last railway strike, a number of Bradford buyers secured some very cheap wool in London, owing partly to the absence of other buyers who could not get to the sales, and also the unwillingness of most people to buy wool, tie up their money, and be unable to move the raw material to consuming centres. It was obvious that one or two were hoping to repeat this experiment in the event of a coal strike, and depression may be expected at the Liverpool sale next Thursday, if no steps towards a settlement have been made. It must not be forgotten that not 10 per cent. of the mills in the West Riding have coal actually in stock to run more than a week or ten days.

OILSEEDS AND VEGETABLE OILS.

(FROM OUR CORRESPONDENT.)

Trade in vegetable oils has been on steady lines, and prices have held firm, with but little variation, except in the case of cotton oils. Supplies of linseed oil for prompt delivery are short, but the future is assured by moderate stocks of seed already to hand, and a considerably increased quantity on passage (viz., 31,000 tons). A fair trade is passing for spot and near positions, but on the whole consumers are not doing more than covering actual needs. In regard to cotton oils, the market is totally inactive, and quotations have been marked down £2 to £3 per ton. America is now competing in English markets with refined edible. The English supply is, however, not big, and is not likely to exceed demands until stocks of seed are replenished. Some business is being done in ground nut and palm kernel oils, and also in deodorised soya oil, but rape and castor oils are slow, and values about unchanged.

In the oilseed market, linseed, on spot and near, maintains its value, but an easier tendency is to be noted forward. Nevertheless, buying is not active, in view of the uncertainty as to the trend of future prices. A good deal of the Plate crop remains unsold, and America will soon be able to turn to her own seed, reports regarding which are favourable, and indicate a yield considerably in excess of last year. Indian shipments continue light. Latest advices give an estimated yield of the Canadian domestic crops of 263,000 tons, or nearly double that of last year, but the quality is spoken of as not being so good.

Cottonseed is easier, and lower, Egyptian old crop offering at £19 for September loading and £21 quoted for new crop, after business done below that figure. Bombay has again been done at £14 for shipment. Soya beans are offering forward, but English crushers are outbid by the Continent. Very little of this material has found its way to England this year, principally two cargoes to Hull, and altogether only about 10,000 tons.

Oilcakes are in moderate demand, owing to harvest intervening, but recent advances are sustained.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

Hides were a shade firmer at Thursday's Bermondsey auction, seconds advancing ½d. Calf were also firmer, and made ⅝d-1⅛d advanced. Skins, on the contrary, were easier, and dropped 1d-6d each. The outlook is uncertain, as tanners are not eager buyers in view of the poor demand for leather.

There is little to report in foreign hides, and the position is not so good as reported last week. A sale of Smithfield fregorific hides is reported in Liverpool at 15d c.i.f., and Itaquis at 14½d c.i.f. At the Mincing lane sales, held on Thursday, buyers and sellers' ideas were too far apart for business, and the bulk of the offering was not disposed of. It was also decided that the next London sale of foreign hides should take place on October 21st next. Chicago cables the hide market as depressed, with best packers offering at 28 cents, and little doing in dry qualities.

The trade in leather has relapsed somewhat this week; buyers do not seem anxious to stock sole leather, even in view of concessions, and are probably holding off until the October Shoe and Leather Fair in London. Light bends of 12-14 lbs average are still selling as supplies are scarce. Offal is flat, and consumers have secured good bargains of late. In upper stock there is little doing; curriers and dressers are on short time, but large quantities of leather are arriving from America and the Continent at very low prices.

Shoe manufacturers are feeling a spell of dull trade, but are doing their best to keep up prices, although they are able to buy cheap leather. Football boots have almost been cleared out, and there is a good demand from retailers for fancy evening wear at high prices.

SILK.

Messrs. Chabrières, Morel and Co., of Lyons, report, under date September 6th, as follows :—In the course of August manufacturers in Lyons have resumed purchases on a small scale, having been prompted thereto by the reduction of their stocks of raws and by their having received some orders for silk fabrics. The position on our market remains sound; looms are active, and the cautious policy followed by importers has prevented the accumulation of any large stocks of silk; as a matter of fact, ready silk, in many descriptions, is difficult to find. Prices have advanced by a small fraction, in sympathy with the weaker tone of the franc rates of exchange. The improved demand, however, has not developed into anything like an active market, the European trade being unable to bear the burden of the present production of silk without the support of the United States, where prospects are yet unsatisfactory; credits there have been curtailed; a few failures amongst manufacturers have been reported, and stocks of silk goods are still important. As America now normally absorbs more than two-thirds of the total silk production, its protracted abstention has a positively distressing effect on most producing centres, and especially in the East. Japan, after having exported last season 95 per cent. of its silk to the United States, is the first victim of the American crisis; present prices in yen are only about 10 to 15 per cent. higher than those of June, 1914. Japanese reelers are said to have taken steps to reduce their production, and thus prevent the already important stock in Yokohama from assuming unreasonable proportions.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, September 10.

There was decidedly more tone about certain markets this week, and quite a fair amount of business was carried through, and prices responded where improved demands ensued. Apart from better support forthcoming from home-trade buyers, export requirements were also on an extended scale with regard to jute and other fibres, while activity prevailed with regard to copra at hardening rates, and which incidentally affected palm kernels. Tea remains a very poor market, only the finest sorts being saleable at recent rates, a concession having to be made in the case of lower qualities.

THE BANK OF TAIWAN, LIMITED.

Incorporated by the Special Charter of the Imperial Japanese Government, 1899.

London Office - - 58 OLD BROAD ST., E.C.2

BRANCHES: Amoy, Batavia, Bangkok, Bombay, Canton, Foochow, Hankow, Hongkong, Kiukiang, Keelung, Kobe, Moji, New York, Osaka, Semarang, Shanghai, Singapore, Soerabaya, Swatow, Tainan, Tokyo, Yokohama, &c., &c., and Correspondents in every principal town in the World.

The Bank is incorporated by Special Charter of the Imperial Japanese Government, and is authorised to issue its own notes in Formosa, conducts general Banking Exchange Business, undertakes Trust Business, and acts as Business Agents for other Banks. Special facilities are available for Exchange Business on Japan, China, India, Straits Settlements, Dutch East Indies and France, where the Bank has special working arrangements with Cox & Co. (France) Ltd. Deposits are received for fixed periods on terms which may be ascertained on application.

SUGAR.—Fair allotments made on vouchers at current rates, but only a small business transpired in free lots. These included crystallised West India at 95s to 100s, with a few stand-out lots up to 105s, white Java, 118s; Mauritius, 116s to 118s; and muscovado, 70s to 75s for Jamaica; and 88s 6d for Barbadoes. Fair sales in Tate's pieces at 70s to 85s, as to quality. American syrup quite neglected, and largely nominal. Good mid, 45s. Honey meets a continued slow sale. Liquid glucose, spot, sold, 51s.

COFFEE.—General course of trade again moved slowly, and supplies offered in auction were only partially disposed of at prices showing no material alteration. Export requirements remain on a very limited scale. Future delivery dull, and December delivery, sold, 62s.

COCOA.—Quiet, and the small sales on spot include Accra at 67s, Liverpool terms.

TEA.—During the week, 33,600 packages Indian and 34,800 packages Ceylon were catalogued, and apart from a sustained demand for the best descriptions at steady prices a dull and depressed market resulted.

RICE in good demand, both on home and export account, also broken kinds. Bran firm, quiet. Japanese peas, spot, sold, 30s; and Rangoon beans, 18s 6d.

SPICE.—Pepper market firm, prices being again dearer in most cases, and a fair demand ensued. Fair black Singapore, spot, sold, 6⅞d to 7¼d; October-December, 7⅜d; Lampong, spot, 7⅛d; Aleppy, 7⅛d; Tellicherry, 8d; white Singapore, 1s 2⅛d; Muntok, 1s 3⅛d; ditto, October-December, 1s 2¼d. Zanzibar cloves, spot, sold, 1s 7d, for fair quality. Pimento, 4d. Tapioca quiet. Fair flake, spot, sold, 2⅜d; fair Penang seed pearl, 25s. Sago flour, August-October, done, 21s 3d; farina, ditto, 29s 6d; desiccated coconut, fine cut, spot, sold, 82s 6d; medium, 92s 6d; coarse, 76s. Eastern nutmegs sold to a fair extent for home and export.

JUTE.—Market dearer for both old and new crop, with steady buying from home and continental spinners. Native first marks assortment, actuals, old, August-September, sold, £44 to £44 10s; subs at £40; new actuals, August-September, £51 10s to £52; September-October, £49 10s to £50 10s; subs, September-October, £45 10s to £46; lightning actuals, old crop, August-September, £35; subs, £33; new actuals at £38 10s, and subs, £37. Calcutta hessians and twills steady, but quiet.

HEMP.—Manila steadily hardened, while influenced by the rate of exchange and freight question. J grade, July-September and August-October, sold, £67 to £68; October-December, £67 10s; K, August-October, £58, sellers; L, £57 paid. New Zealand steady, quiet. Italian quiet, with consumers working on their existing stocks, as shippers now require very high figures.

SHELLAC.—Market dull and rates irregular. Fair T.N., spot, 640s; October, 540s to 555s and 530s.

COPRA.—Market dearer, with sellers reserved, but easier since. F.M.S. Straits, October-December, London, sold, £57 to £58 and £56 10s; ditto, Rotterdam, £58 5s to £56 15s; Ceylon, October-December, London, £58 to £56 10s; F.M. Straits, October-December, Marseilles, £56 10s to £56; Zanzibar, September-November, London, sold, £54 10s to £55 and £53. Palm kernels, October-December, sold up to £40 and £39.

MENTHOL.—Kob-Suz, spot, sold, 34s; peppermint oil, ditto, 7s 6d; aniseed, 4s 1½d; eucalyptus oil, 2s 10½d; slab camphor, 6s 6d per lb.

RUBBER.—Prices again sagged under lack of sufficient support. Crepe, spot, sold, 1s 8⅛d to 1s 8d; October-December, 1s 9⅜d to 1s 9d; sheet, spot, sold, 1s 7¼d to 1s 6⅜d and 1s 6½d; October-December, 1s 8d to 1s 7⅛d and 1s 7¼d Fine hard Para, spot, 1s 8d.

OILS.—Linseed quiet, but firmer. Spot, net, naked, 80s; September-December, 77s 9d. Rape firm. Crude, spot, 75s; refined 90s. Cotton easier. Crude Egyptian, 73s; Bombay, 63s; refined edible, 93s. China wood quiet. Hankow, spot (barrels), 108s; August-September, 100s; and Hong Kong, spot, 104s. Palm kernel firm. Crushed, spot, 80s; extracted, 79s. Palm quiet. Softs, July-August, 60s 6d; Lagos, 62s 6d. Coconut dearer. Ceylon, spot, sold, 92s; August-October, 91s; Cochin, ditto, 98s. Soya quiet. Oriental, afloat, 70s; October-December, 74s; deodorised, 90s. Japan fish quiet. August-October (cases), 42s. Cod liver dull. English, spot, sold, 48s. Groundnut firm. English crushed, naked, spot, 83s; deodorised (barrels) 105s. Turpentine quieter. American, spot, 140s 9d; September-December, 142s 9d; January-April, 147s. Rosin slow. American, grade B, 47s 6d; F, 56s; G, 56s; K, 57s; M, 57s 6d; WW, 59s; French, F/G,

Two boxes are set apart for each customer's exclusive use, periodical calls being made from Eastman's nearest branch.

SEND FOR LIST.

EASTMAN & SON (Dyers & Cleaners) LTD.

Works: Acton Vale, W. 3.

Eastman's for Excellence

(*Continued from page* 421.)

53s; H, 53s; WW, 54s; extra pale, 55s. Petroleum advanced sharply; American, spot, 2s 4¼d; and water white, 2s 5¼d per gallon.

OILSEEDS.—Linseed market firm, but quiet. Calcutta, afloat, quoted £40; September-October, £39 10s; Bombay, September-October, £40; afloat sold, £40 2s 6d; Plate, afloat, Hull, £36 5s; September-October sold, £35 10s to £35 15s. Rapeseed firm. Toria, September-October, Hull, sold, £34 5s; real bold Ferozepore, £33 5s; brown Cawnpore, £31 10s. Cottonseed easier. London Egyptian, f.a.q., old crop, August-September, sold, £18 10s; September, new, £20; Bombay, spot, £14 5s; August-September sold, £14 to £14 5s. Castor seed steady. Bombay, September-October, Hull, sellers, £28. Gingelly steady. Chinese, afloat, to Continent, sellers, £47 5s. Groundnuts quiet. Coromandel, August-September, £41.

METALS.—Tin continued an easier market until Tuesday on realisations, and a scarcity of buyers, cash declining to £264, three months' to £270 10s, but, by the middle of the week, better support was accorded, while cash registered £267 to £266; three months', £272 to £274 10s.; and since done at £272 10s, the tendency being in a further upward direction on Thursday, and after limited dealings, cash settled down at £267; three months', £274. The tendency was firmer on Friday under good buying, cash reaching £269 10s, and three months' £275 10s. English ingots, £268 to £269. Copper: The standard market manifested a dull tone early in the week, cash by Tuesday relapsing to £94 17s 6d; three months' to £95 15s. Values of these dates improved by Thursday's session (on somewhat reserved offers and increased buying) to £97 10s and £98 respectively. Values were a little lower at Friday's session, only a moderate business being done chiefly in three months at £96 10s to £97 5s. Electros, £112 to £118; best selected, £107 to £108, and strong sheets, £166. Lead easier at £35 10s to £35 5s. Spelter firmer, £39 15s to £41. Antimony: English, regulus, ordinary to best, £52 to £55. Aluminium: Home trade, £165; export, £185. Wire bars, £117 to £118, being firmer.

NEW ZEALAND

A Wealthy Country, Splendid Climate, Fertile Soil, Plenty of Water.

An Ideal Country for the Farmer, the yield of grain and percentage of lambs being phenomenally high. New Zealand, a country as large as the United Kingdom, with a population slightly over one million, exports annually products up to the value of Thirty Millions Sterling.

NEW ZEALAND IS RICH IN COAL, IRON, TIMBER, GUM, GOLD AND SILVER. Total yield of minerals, over One Hundred and Thirty Million pounds.

The Government has advanced over Twenty-One-and-a-Half Million Pounds to Farmers and Workers, at a low rate of interest, for Improvements and Buildings, and is empowered under the new "Housing Act" to set apart Crown Lands and make advances up to One-and-a-quarter Million Pounds annually for the same purpose.

Railways (3,000 miles), Telegraphs and Telephones (216,742 miles of wire) are State owned and operated.

To hose desirous of making a home in the new country New Zealand offers solid advantages.

Excellent Steamship Services are run direct to New Zealand by the Shaw, Savill and Albion Company, Limited, New Zealand Shipping Company, Limited, and the Federal and Shire Lines.

THE MONEY MARKET.

MONEY has been rather more plentiful, or perhaps the nerves of the market have been less fussy, and it has consequently supplied its needs more comfortably. The process of discounting October bills with the Bank of England has continued, but a trifling amount that fell due was repaid. The tendency in the discount market was a share easier, but the general feeling that the present autumn will be a difficult period kept the market in a cautious mood. It will certainly require all our financial statesmanship to cure the industrial and commercial community of its delusion that unlimited credit is a necessary of life without producing uncomfortable spasms. Merchants who have accustomed themselves to paying cash, provided by their banks, for all their purchases are slow to resume the

old system of paying by acceptance, which obviously tends to quicken sales and liquidation. But the determination of the banks to check expansion is now tending to the revival of business on the old lines. No immediate effect is produced on the inflation problem, but quicker liquidation should help to this end, and should also loosen the present deadlock, which allows wholesale prices to fall without materially affecting prices that the consumer has to pay. A glut of goods in the East, owing to too hasty shipments and slack demand, has been causing the Indian and Far Eastern banks to restrict and modify facilities to which some inexperienced customers believed themselves entitled. Commerce has to face the facts of the position, which point to lower prices and a lower range of profit. The prospect may be uncomfortable for the profit earner, but the present deadlock, and its possible consequences, are more so. There are hopeful signs of better feeling in the labour world, and our industrial and commercial leaders can do much to help the improvement by recognising that the times are critical and call for united effort on the part of all classes. The financial and investing section can also play a great part in the effort that is needed by providing industry with the real capital that is so hungrily needed at home and abroad. Then if our politicians will only give us real peace and freedom of trade the bad times that seem to threaten us may be avoided, or at least made much less serious.

* * * *

The Bank return was moderately favourable, with an increase of £16,000 in the stock of gold, a decrease of £744,000 in the note circulation, and a consequent increase of £760,000 in the Reserve. The market's discounting operations were reflected in an increase of 7 millions in the Other securities, while Government securities declined by 3½. Other deposits advanced by 5½ millions, and Public were 1¼ lower. The circulation of currency notes declined by £772,000 to £354,415,700, which includes £3,474,800 for notes called in but not yet cancelled, making the fiduciary issue £307,265,700, or £13,334,300 below the maximum.

* * * *

The following table shows Public Income and Expenditure for the week ended September 11, 1920:—

Receipts.	Mln. £	Expenditure.	Mln. £
From Revenue	20·642	Supply Services	12·535
Taken from Exchequer balances	504	Interest on Debt	2·746
	21·146	Sundries	40
Less Debt reduction	5,825		
	15·321		15·321

These operations decreased the debt by a sum of £5,824,926, and caused the following changes, which are reflected in our table of National Debt given in another column:—

	Mln. £		Mln. £
Advances by Public Departs.	+ 2·000	Treasury Bills	— 3·110
Treasury Bonds	+ ·150	Bank of England Advances repaid	— 3·000
National Savings Certificates	+ ·200	Surrenders of Bonds, &c.	— 1·165
Sundries	+ ·100	Depreciation Fund	— 1·000
	+ 2·450		— 8·275

The principal contributors to Revenue were Customs and Excise £4,896,000, and Miscellaneous £5,548,970. The floating debt was reduced by £4,136,000.

* * * *

Although startling in its rapidity, the sudden break in sterling in New York in the earlier part of the week is not difficult to explain, at least in part. The new French loan in the States did little or nothing to help France in its task of building up a reserve sufficient to meet the remainder of its share of the Anglo-French loan, and the French demand for dollars has been, if anything, heavier than before. At the same time, the threat of a coal strike in England, the increasing seriousness of the labour situation in Italy, the fear of the possibility of similar movements in France, and the prospect of a new Bolshevik offensive in Poland are making Americans still more afraid of conditions in Europe. When these influences are added to the fact that we are now near the heaviest period of the year for the American exchange, and that, mainly owing to credit conditions in the United States themselves, very little of the temporary accommodation usual at this time of the year is available for foreign customers, it can be seen that the depressing influences are strong. At the same time the reaction of the last few days shows that the downward movement had been carried too far, and this is borne out by the fact that the quotation for futures has risen from rather over one cent above spot per month to about two cents. The fall in the French franc, as was to be expected, has been more severe than that of sterling, and although there has been a corresponding, if less effective, recovery, there were yesterday further signs of weakness. There would appear to be at present no reliable grounds for the rumour of a new French loan in London. Francs for future deliveries remain unchanged at about 15 to 20 centimes per month below spot. The Belgian francs show similar movements, the spread between them and French francs, however, at 3f 20c having narrowed some 15 centimes on the week, with no apparent cause. At 20 to 30 centimes per month below spot the quotation for futures remains unchanged. In spite of labour troubles the lira has remained comparatively steady, being only about 82 as compared with 81.25 a week ago. Amsterdam at 11.25 is slightly more favourable to us, while futures have narrowed down to between par and 1 cent. per month below spot. Switzerland at 21.62 has moved about 10 centimes in our favour, while sterling is also slightly better in Madrid. In spite of the new rumours, at present unconfirmed, of a loan in London, the Norwegian exchange has continued to depreciate. Stockholm also, which showed a sharp movement against sterling in the middle of the week, due, it is thought, to covering by buyers who had been hoping for a more rapid rise, has also moved again in favour of London. German marks have depreciated heavily from 189 to 221. This is attributed in part to the freeing of the exchanges, in part to heavy food purchases, and to further uncertainty caused by the postponement of the Geneva Convention, but some of the weakness has also been caused by transfers to London in connection with the settlement of pre-war debts, though why these transfers should have been necessary in view of the surplus of German assets on this side is not clear. In sympathy with the rise in silver, both Hong Kong and Shanghai dollars are 2d dearer. Rupees are also ¾d higher on the week.

EVENTS OF THE WEEK.

SEPTEMBER 13TH.—Board of Trade issues summary of coal profits for quarter ended June 30th. Death of Lord Murray of Elibank. Meeting of French and Italian Prime Ministers at Aix-les-Bains concluded. Announcement of military agreement between France and Belgium.

SEPTEMBER 14TH.—Mr Lloyd George defines Government policy on decontrol of coal. Miners' reply to Board of Trade's coal profits statement. *Daily Herald* rejects offer of £75,000 Soviet money. Gold 119s per ounce.

SEPTEMBER 15TH.—National Joint Industrial Council recommended suspension of strike notices and withdrawal of lock-out notices in the electrical engineering dispute. Sir Ernest Clarke appointed Assistant Under-Secretary for Ireland. French President resigns.

SEPTEMBER 16TH.—Miners' proposals to Sir Robert Horne a step towards peaceful solution. Explosion in Wall street. New York Stock Exchange closed.

SEPTEMBER 17TH.—Death of Lord Faber. Miners' Conference at Board of Trade adjourned until 20th.

COAL: FACTS AND ESTIMATES.

THE whole coal controversy has become so deeply enveloped in a fog of estimates that we welcome any statement which gives us something like definite results. Although the information has little direct relevance to the issue upon which the miners proposed to strike this month, it is well to have the actual facts concerning output, costs, proceeds, and profits of the coal industry for the first six months of the present year. The conditions then were not those which exist to-day, and the profits made then are not those which the miners want to divide up between the domestic consumer and themselves. The profits claimed by the miners have still to be earned; they exist as yet solely in the realm of visionary estimates. But gradually we are acquiring some definite information concerning the past, and the finance of the industry is not quite so conjectural as it was.

During the quarter ended June 30th last the coal sold at home and abroad yielded £95,658,036, or 36s 7.3d per ton. Included in the 52 million tons sold were 9,432,588 tons for export and foreign bunkers upon which the price is uncontrolled. The home prices were controlled, and it was not until May 12th that the additions were made of 14s 2d to the price of domestic coal and of 4s 2d to that of industrial coal. For about half of the quarter home supplies were being subsidised by means of the profits made upon export and bunker coals. The total costs of production were £87,749,995, or 33s 6.98d per ton. The surplus of revenue over costs was thus £7,908,041, or 3s 0.32d per ton. In the previous quarter ended March 31st domestic coal prices were subject to the reduction made in November of 1919, but as the 20 per cent. increase in miners' wages did not take effect until March 12th, near the end of the quarter, and the output of coal and the amount exported were both higher, the surplus of revenue over costs for that quarter was as much as £14,377,702, or 5s 1.97d per ton. For the first six months of 1920 we therefore have a gross surplus of £22,285,743, subject to debenture interest and the coal-owners' guaranteed profits. The net profit accruing to the Exchequer, after meeting these charges, for the six months was about 8½ millions.

These figures have, as we have said, little direct relevance to the present coal controversy. During the first quarter of the year miners' wages were raised, and during the second quarter the prices of home consumed coal were raised, so that the present rates of net profit can only be estimated. Semi-officially it has been stated that the net profit of the quarter ended June 30th, had the present home prices been in force for the three months, would have been about 8 millions. This would suggest that for the current quarter the net profit can scarcely exceed 8 millions sterling, seeing that output has been sagging during the summer and the exports have not been increased. The sales of bunker and export coal remain fixed at about 9 million tons a quarter. What becomes, then, of the Miners' Federation estimate of an annual net profit of 66 millions sterling, or 16½ millions a quarter?

We do not press the point, because our scepticism towards coal estimates is profound, whether they come from the Coal Mines' Department or the Miners' Federation. They have always confused counsel, and have always been wrong. The profit of 66 millions does not exist. These millions have yet to be earned, and they certainly will not be earned if a strike breaks out this month. Coal profits depend upon exports, and there will be no surplus for export for many months if the miners really do strike. The story of this 66 millions is rather curious. Mr Frank Hodges is responsible for the figure. When the prices of home consumed coal were put up in May to a level which would cover cost of production and dividends to coal-owners, Mr Hodges came to the conclusion that coal exported must earn a net profit of at least £2 10s a ton. He reckoned the exports at about 26 million tons for a year, and so he arrived at his 66 millions. The Miners' Federation accepted the estimate, and the Coal Mines Department did not challenge it. The Government certainly never explicity agreed to the figure, but it has never been officially challenged. Now semi-officially we are told that 32 millions—8 millions a quarter—is nearer the mark, and there seems every prospect of a strike to divide up a conjectural profit, which not only does not exist at all at present, but never will exist—even at 32 millions—if all hopes of future profits are killed by the strike. It will be a strike to secure the treasure at the foot of the rainbow. That is what comes of playing with estimates.

Let us get away from visions and come down to the only sound basis upon which an industry may be successfully built up—that of output. The foundations of the coal industry are slipping away while miners and the Coal Department wage war over estimates. In 1913 the output of coal per man employed above and below ground was 259 tons—about exactly 5 tons per man per week. In 1919 the output of coal per man employed was 197½ tons, or less than 4 tons per man per week. During the first

six months of 1920 the output of coal per man employed was 102.4 tons, or at the rate of nearly 4 tons per man per week for the 26 weeks. We see, therefore, that though the output of 1920 is slightly better than that of 1919—during which year there was a strike in Yorkshire—the output per man per week is a whole ton, or 20 per cent., less than in 1913. If the miners in 1920 would give us the output of 1913 they would be producing another million tons a week, and there would be no difficulty about granting them any reasonable increase in wages. Automatically earnings would increase with the output. Another million tons of coal per week would go far to solve most of our domestic and exchange problems. It would increase the annual value of our coal exports by some 200 millions sterling, for we could export at high prices to a world starving for fuel as much of our surplus as we produced. The prices to home consumers could be lowered, for the costs of production per ton would inevitably fall. More output, the output of 1913, is the solution of all the troubles of the coal industry. The extra ton per man per week would give the miner higher wages, the home consumer cheaper coal, and the country improved credit and purchasing power abroad. The settlement of the dispute in the engineering trade is a hopeful sign of a better feeling in the industrial world, and it may be hoped that the wage-earners are recognising that reducing production by strikes or restriction is not the way to prosperity. In the case of the mines, reduced output cannot be wholly charged to the account of the men; but they can do a great deal to amend it, and if the miners would pursue output instead of visionary profits they would lay up treasure to themselves and to their fellow-countrymen, and would render even greater services to their country in peace than they did as fighters and coal hewers during war.

THE NATION'S INCOME.

UNDERLYING the determination of general wage settlements, the possibilities of social reform, and the nature of our foreign policy, is a simple and as yet imperfectly answerable question: What is the size of the national output which constitutes our real income; is it greater or less than it was before the war?

It is known that a number of industries are maintaining an output but a little below or even a little above the pre-war level; such industries are concerned with the production of steel, ships, wheat, motor-cars, pottery, and glass. It is certain that a very large number of others, in particular those producing cotton and woollen fabrics, coal, meat, and new buildings, are substantially below that level of productivity. The available information is, however, too scanty for a direct method of inquiry to yield an estimate of any worth; such an inquiry must be left to the Census of Production of 1920. Nevertheless, by using pre-war conditions as a basis, and by selecting only what appear to be the dominating industrial changes which have since occurred, it seems possible to come a little closer to the facts on which a sound judgment must be based.

In 1907 it was estimated that the money value of the products which formed our annual real income was about £2,000 millions, and that about one-sixth of this was annually added to our accumulations of investments abroad and capital equipment at home. Those figures certainly indicated a strong position, stronger comparatively than that of any other European country; broadly speaking, they showed that we had a surplus output, valued at more than £300 millions, which, without lowering the general standard of living, might be made available for emergencies, or social amelioration, though only at the expense of future development. But the position was less strong than it appeared; for there is good reason to suppose that the outstanding characteristic of the previous half-century—the rapid growth in productivity and in the real incomes of all classes—was undergoing change. In a recent investigation into "The Change in the Distribution of the National Income, 1880-1913," Professor Bowley concludes that since 1900 our income measured in pounds sterling has "barely kept pace with the diminishing value of money"; in other words, that "in the early years of this century real income increased little faster than the population." The general truth of this conclusion can hardly be doubted, and its implications are momentous. It requires us to accept, in greater or less degree, the disconcerting view that even in pre-war days there was no great margin of productive capacity to be squandered in the form of increased leisure, and that a continuous rise in the general standard of living was attainable only by increased efficiency and larger output.

What have been the dominating changes in productive capacity since those days is a matter on which each will form his own opinion. Without discussing the problem, or touching on ultimate causes, it is here suggested that the main changes are three: (1) the fall in the aggregate output of labour; (2) the destruction of capital; and (3) the more favourable terms on which we obtain products from foreign countries.

The first of the three, the reduced output of labour, seems to overshadow all others in importance; and it has yet to be seen whether this country can maintain its standard of living with working hours reduced to 48 or 44 per week. The actual loss of productive capacity which the change involves evidently depends on many considerations: the average fall in working hours; the change in the amount of overtime worked; the increased efficiency resulting from shorter hours in particular industries, and the general tendency to a lower intensity of work. It is out of the question to discuss these changes in detail, and indeed all that is required for present purposes is some idea of the order of magnitude of their effects. On the whole, it seems not unreasonable to assume that their present net effect on productivity is round about that of an average reduction of one working hour per day. At any rate, that figure will serve as a basis of calculation, the results of which may be modified in accordance with individual taste. Some idea of the comparative importance of such a reduction is given by the fact that the loss of working time in seven months would be more than 40 times as great as the loss of 7.4 millions (days reckoned at eight hours each) recorded by the *Labour Gazette* as due to trade disputes from January to July of this year. Put the result in another way. A loss of one working hour per day, with efficiency unchanged, applied to, say, 14 millions of workers is arithmetically equivalent to the withdrawal from production of one and three-quarters millions of workpeople working full time for eight hours a day. If it be assumed that an average hour's work is worth 1s 6d (a price less than that paid to builders' labourers), the loss expressed in money would be about £300 millions per annum. But that is not all; for to that figure must be added a further large but incalculable amount due to the corresponding reduction in the working hours of the plant and machinery with which Labour is associated. Even if this simple calculation is based on too high a figure, it is clear that the effect of the reduction of hours on the productive capacity of the country is one of the very first importance.

The extent of the loss and destruction of our capital abroad and at home is still highly conjectural. The annual stream of products which we can draw from other countries by way of dividends on our foreign investments has been doubly diminished. It has been reduced by the great rise in gold prices, which has enabled, *e.g.*, the Argentine to meet her annual dues to this country by the export of far less wheat and meat than hitherto; and it has been further reduced by a considerable diminution in the net balance of our foreign investments. Who is to say to what extent the capital equipment at home has declined in amount and efficiency? There are, it is true, considerable replacements to make good in roads, railways, buildings, livestock, and stores of materials in the hands of producers and consumers, but it is difficult to make these

add up to any large figure. When account is taken of the expansion of plant in such industries as the iron, steel, and engineering trades, the wider extension of standardisation and the improvement in industrial and commercial methods, it seems very doubtful whether, at the present moment, the aggregate productive capacity of our home capital is much lower than it was before the war; though, of course, its actual output is lowered by its shorter working day and the great uncertainty of the conditions in which it operates. In so far as these considerations have any value, they suggest that the contribution now made by capital to our national income has declined by a substantial amount, but not by an amount at all comparable with that due to the lower output of labour.

The consequences of this two-fold decline in our national productivity are at present only partly visible. They are partially concealed by the exceptional productivity of that part of our resources which is applied in foreign trade: by the exceptionally favourable rate at which our products exchange for those which we draw from other countries; in yet other words, by a rise in the average price obtained for our total exports substantially greater than the rise in the average price paid for our total imports.

A recent valuation, at 1913 prices, of our foreign trade returns makes it possible to calculate that our gain from this source amounted, during the first six months of this year, to some £70 millions, or at the rate of £140 millions per annum. It can hardly be supposed that the abnormal pressure of foreign demand, which has driven up the value of U.K. exports to nearly three and a-half times their 1913 level, can be long sustained. The profit it brings us can conceal only temporarily and partially difficulties which already arise from the fall in our national productivity, and may soon present themselves in a more acute form.

TRADE OF THE BRITISH WEST INDIA ISLANDS.

An unfounded report that the United States were prepared to accept the cession of the British West Indies, in payment of the debt contracted by the United Kingdom, lately roused a brief flutter of interest. But though in 1803 the United States purchased Louisiana from France, they are not likely—even if we were willing to sell—to offer so enormous a price for so small a territory, with which they have all the opportunity of trading they can desire, and which could never prove a serious threat to them in case of war. The total area of the British West India Islands is about 12,200 square miles, and the population is somewhat over one and a-half millions, composed mainly of negroes and mulattoes. Jamaica, the largest island, is 4,200 square miles in area, or about half the size of Wales, and has a population of about 900,000, barely 3 per cent. of whom are whites. Trinidad, the next largest of our islands, is less than 1,700 square miles. It was discovered by Columbus, and annexed to the crown of Spain, but for 300 years made little progress, until in 1783 M. St Laurent—a French planter of Grenada—was struck by its fertility, and induced the Court of Madrid to invite setlers, free of all restrictions except that they should be of the Roman Catholic faith. Success attended this effort, and on the outbreak of the French Revolution a number of French families fled from St Domingo to Trinidad. To the present day the French element preponderates in this colony, although it was never under French rule. In 1802 the island was ceded to Great Britain by the Treaty of Amiens. Jamaica was captured in 1655 by a fleet sent by Cromwell. The majority of the other of the British West India Islands were captured later in the seventeenth century from the French, Dutch, or Spaniards. Barbados, however, the most fertile of all the islands, has always belonged to England since it was first taken possession of in 1605. It is only about the size of the Isle of Wight, but is cultivated throughout its whole area, its population numbering about 200,000. The group of islands known as the Leeward Islands, viz., Antigua, St Kitts, Dominica, Montserrat, and the Virgin Islands, have an area of 700 square miles (about equal to the county of Surrey) and a population of 130,000, whilst the Windward Islands, viz., St Lucia, St Vincent, and Grenada, are even smaller, and have a population of less than 200,000. The Bahamas consist of more than 500 islands, of which not more than 20 are inhabited, but they are famous as containing the island of San Salvador (Watling Island), the land first seen by Columbus in 1492.

The increase in the foreign trade of the British West India Islands from 1901 to 1913 is shown in the following table:—

British West India Islands. (In Thousand £s.)	Imports.				Exports.			
	1901.	1913.	Incr'se.	Per Cent.	1901.	1913.	Incr'se.	Per Cent.
	£	£	£		£	£	£	
Total	6,878	10,899	4,021	58·5	6,314	9,891	3,577	56·6
Trinidad and Tobago	2,652	4,968	2,316	87 0	2,446	5,206	2,760	112·0
Jamaica	1,756	2,837	1,081	62·0	1,939	2,430	491	25·3
Barbados	1,022	1,353	331	32·4	950	761	—180	—20 0
Windward Islands	704	692	— 12	1·7	434	615	181	42 0
Leeward Islands	376	588	212	56·0	321	577	256	80·0
Bahamas	325	404	79	24·0	177	264	87	50·0

From the table * we see that the value of the total imports rose from £6,878,000 in 1901 to £10,899,000 in 1913, an increase of £4,021,000, or 58.5 per cent.; and that the value of the total exports rose in the same period from £6,314,000 to £9,891,000, an increase of £3,577,000, or 56.6 per cent. The value of the total trade, therefore, rose from £13,192,000 to £20,790,000, an increase of £7,598,000, of 57.6 per cent. The percentage increases of the values of the imports by Trinidad, Jamaica, and the Leeward Islands are decidedly high, being 87, 62, and 56 respectively, while that of Barbados was 32.4, and that of the Bahamas 24 per cent. Our imports from these tropical possessions rose in value from £2,612,330 to £2,940,664, an increase of £328,334, or 12.5 per cent. Our exports of British produce and manufactures rose from £2,860,654 to £3,420,770, an increase of £560,116, or 20 per cent.; whilst our re-exports showed a decrease of £3,541, or 0.76 per cent., falling from £460,421 to £456,880.

It is clear, therefore, that the bulk of the increase of trade done by the British West Indies was not with the United Kingdom. The next table shows whence the principal islands drew their chief supplies overseas:—

The advantage of contiguity is shown in the fact that the value of the imports by the islands shown in the table as received from the United States, British North America, and the British West India Islands and British Guiana, exceeded by 25 per cent. that of the imports received from the United Kingdom. In the case of Trinidad, the trade with Venezuela (from which the island is only separated by a channel of 16 miles) owes much to this cause. The value of the imports from all foreign countries received by the three islands is seen to have been £4,719,000 compared with a value received from the United Kingdom of

* Based on figures given on pp. 54, 55, and 60, 61 of Cd. 9,051.

£2,893,000. The next table shows the principal countries to which exports were sent :—

The British West India Islands show that trade does not always follow the flag. The United States and British North America take a very large proportion of the exports of the West India Islands, and the islands are rapidly increasing their own mutual trade. The table shows that in 1913 the value of the exports of the three islands to foreign countries was £5,473,000, of which the United States took produce valued at £3,159,000, while the value of the exports to the United Kingdom amounted only to £1,662,000.

LATIN-AMERICAN NOTES.

(BY OUR CORRESPONDENT.)

THE Municipality of Buenos Aires seems to have been somewhat unfortunate in its attempts to raise capital either for reproductive purposes or to pay off the foreign-raised loan, falling due on the 15th of last month, which it was found impossible to renew. The loan in question was originally granted for a term of three years, bearing interest at the rate of 4½ per cent., and repayment became due on February 1, 1915. The loan has been renewed at 6 per cent., with a commission of ⅞ per cent., from time to time, and the municipal authorities were evidently of opinion that the procedure could be repeated indefinitely. But the lenders have refused further extensions. Meanwhile, there is the retiring of over $35,000,000 m/n in 7 per cent. certificates to be arranged at the end of the year, and the needs of a funding loan of $200,000,000 to deal satisfactorily with the floating and other debts. The anxieties of the Municipality do not end there. With the desire to realise upon surplus public lands, certain plots, which in ordinary circumstances should have secured high prices, failed to attract bids, or at any rate bids that could be accepted. The land in question is that upon which is built the Avenida Presidente Roque Saenz Peña. In view of the small amount of interest displayed by buyers, the offer to sell has now been withdrawn, and the Municipality must look elsewhere for relief from their unenviable position. The floating debt in municipal local liabilities is said to be over $16,000,000 m/n, while the foreign indebtedness amounts to £583,950, due on August 15th last, and £390,000 maturing next month (October 16th). The local Press attribute the financial situation of Buenos Aires to the many political squabbles that have arisen between the Governor of the Province and the majority of the Legislature. Salvation can be found, it would appear, in a fresh election and the preparation of a new budget. There are also prospects of a new loan to be raised in the United States.

BRAZIL.—High hopes are entertained concerning the projected visit of the British Cotton Mission to Brazil, under the auspices of the Cotton Control Association. Hitherto Brazil has been a large consumer, but a moderate producer of cotton, the raw material having been procured to a considerable extent from abroad. The idea of the Mission is to make careful inquiries into the possibilities of extending native cultivation, especially in the northern districts, and to this end the well-known expert, Mr Kerr, is travelling in South America, while Mr Arnold Pearse, another accepted authority, is engaged elsewhere upon the same service. It would mean much for Brazil were cotton cultivation to be rendered possible upon an extensive scale. There are several very powerful textile manufacturing companies in operation, such, for instance, as the Compañhia Nacional de Tecidos de Jute, in Sao Paulo, which is capitalised at 14,000,000 milreis, and employs usually some 2,800 hands. Dividends of 20 per cent. have been distributed. Other cotton mills in Brazil are said to have an aggregate output exceeding in value 240,000,000 milreis. Practically the whole of the capital is held locally, and very few shares come to market. The most largely capitalised concerns are situated in the State of Rio de Janeiro, and include such establishments as the Progreso Industrial do Brasil, with a share capital of 13,600,000 milreis; the Confianca Industrial, 13,000,000 milreis, the Fiaçao e Tecidos Allianca, 12,750,000 milreis; and the Fiaçao e Tecidos Botafogo, 12,000,000 milreis, which manufactures both cotton and woollen goods. The Brazilians desire above all else to become independent of supplies of raw material from the United States, upon which they have been compelled largely to rely up till now. On the other hand, the jute employed comes mostly from British India, the manufactured bags being used almost wholly by the coffee exporters.

FOREIGN BANKS.—Surprise has been expressed in some quarters that more branches of British banks are not established in South America to meet the growing competition of North American monetary institutions, while fear has been felt that British slackness in this direction may mean a gradual supersession of British banking interests by our competitors. There need be no apprehension upon this ground; our large financial institutions having relations with Latin-American countries are perfectly satisfied with the results of their present policy, and it may be said that at no time in the economic history of South America has the position of the British banks been more assured, nor the development of their connections there been more gratifying. There are several avenues open to foreign banking institutions in Latin-America—the establishment of branches of British banks; the organisation of banks solely for British business in South America; the creation of banks for investment and industrial development; and the purchase of an interest in existing native institutions. The last-named is now the favourite method of extending economic connections with the Latin-American countries, and it is proving fruitful. Obviously it is much better to work with than against strong native interests, the opportunities for profitable investment being far larger and, as a rule, much safer. It was believed that the results of the war would have cut off active association of the great European banking houses, and that the advantage would lie with American establishments. This anticipation has not been realised. Notwithstanding the stimulating of North American competition and the increased—but still restricted—investment of North American capital in the leading countries of South America, little has occurred to occasion the least concern to British banking interests. There are not wanting indications that 'ere long there may be a fresh stream of

European capital directed to this part of the world, the increased exports and decreased imports manifesting advancing financial strength. In spite of the heavy requirements of home industries there should be at no distant date a sufficiency of British capital to aid in the further economic development of South America.

COLOMBIA.—With the exception of river transport, which is said to have fallen into a fresh slough of despond —not wholly the fault of the operating companies, of which there are several native and foreign—Colombia is making favourable economic progress, the Government continuing to meet its obligations to creditors, foreign and native alike, with commendable punctuality. Most of the railways which have been built in this physically difficult country with British capital are doing well, and new construction is making headway in several different directions. It is also hoped that recent petroleum discoveries, and the gradual development of others already being exploited, will serve to increase materially the conduct of local transportation, both river and land, now rendered costly and difficult by the unprecedented high price of coal and the compulsory use of additional wood. The extended employment of aerial communication is also making itself felt, while the large sums being expended upon improvement of some of the Pacific and Atlantic ports will mean much-needed increased shipping facilities. It is not improbable that efforts will be made here, as soon as exchange proves more attractive, to raise municipal loans for some of the more progressive of the States, such as that of Antióquia. A loan is urgently required by the municipality of Medellín, but while an offer has been received from bankers in the United States to provide this, there is little disposition upon the part of the authorities to accept aid from that source. Feeling in Colombia is very strong on account of the continued delay by the United States in paying over the sum of £3,000,000—whittled down from the originally agreed amount of £6,000,000—promised in connection with Panama separation agreement of 1903, and the compensation agreed upon for the loss of the canal rights. It is difficult to understand why a settlement of this claim has been so long postponed. Payment would mean a great deal to Colombia at the present time, when money is much needed to assist in the development of one of the most promising of the South American States. French interests, already well represented in this country, may not improbably appear as *deus ex mâchina*. Banking houses in Paris are said to be favourably disposed to the assistance of the Medellín municipality in the not distant future.

Business Notes.

Coal Output.—The production of coal for the week ended September 4th amounted to 4,750,900 tons, which is considerably larger than the August average, and is the highest figure recorded since the week ended June 19th. The following table gives the weekly output since the beginning of May :—

Week ending	Tons.	Week ending	Tons.
May 8th	4,674,302	July 10th	4,676,328
May 15th	4,860,668	July 17th	4,665,546
May 22nd	4,830,707	July 24th	4,284,419
May 29th	3,199,947	July 31st	4,565,200
June 5th	4,718,183	August 7th	3,086,700
June 12th	4,769,824	August 14th	4,595,200
June 19th	4,873,737	August 21st	4,697,200
June 26th	4,685,524	August 28th	4,590,600
July 3rd	4,734,651	September 4th	4,750,900

The weekly average for the five years 1915-19 was 4.7 million tons, and for the five years 1910-14 5.2 million tons.

The Cost of Education.—Details of the increased expenditure by the Government on education are set out in a White Paper (Cmd. 931), published this week by the Board of Education. The net total of the vote for the current year is £45,755,567, as compared with £32,772,473 for 1919-20 and £19,334,705 for 1918-19. The increase, as compared with 1918-19 is £26,426,912, of which £17,382,802 is accounted for by grants for elementary education. Deficiency grants for higher education account for £2,750,000, pensions to teachers for £1,082,610, and education of demobilised officers, &c., for £2,925,000. The last-named arises from the administration of a scheme framed by the War Cabinet at the end of 1918 for paying the fees and contributing to the cost of maintenance of demobilised officers and men at places of higher education. As regards elementary education, the total increased charge on the Board's vote in respect of the increase in teachers' salaries is estimated at £15 millions. The cost of elementary education per child has risen from £4 16s 4d in 1913-14 to an estimated £10 11s 4d in 1920-21, an increase of 119 per cent. This represents the expenditure which is met from the rates as well as that which is met from Government grants. It is pointed out that in 1918 Parliament passed a comprehensive Education Act, "to the operation of which the increase in expenditure which has taken place is often mistakenly attributed. The only considerable item in the Board's vote which is directly attributed to that Act is the provision of £2,750,000 for deficiency grant for higher education."

SELLING AGENTS for Manufacturers in London and Abroad.

Cotton Trade Short Time.—Our Manchester correspondent writes :—There is a tendency for the depression in the Lancashire cotton industry to become more acute, and it was expected that at the special meeting of the emergency committee of the Master Spinners' Federation held in Manchester last Tuesday, it would be decided to recommend spinners engaged on American cotton to curtail production on an organised scale. It was announced at the close of the meeting, however, that after discussion it was resolved to defer coming to a decision on the matter for the present, and the meeting was adjourned for a fortnight. In trade circles some surprise has been expressed at the timidity of the Federation, as it is believed that restriction of output proposals would receive support from the members of the organisation. It is understood, however, that the attitude of the committee was influenced by the pending crisis in the coal industry, and also by the labour dispute on working conditions in the mills at Oldham. Although no organised short time is probable in the weaving section, the stoppage of looms in an iregular way is increasing, and unemployment in the towns of North and North-East Lancashire is becoming a serious matter. Cases of distress amongst the workpeople are being reported.

Iron and Steel Production.—Statistics compiled by the National Federation of Iron and Steel Manufacturers show that a new post-Armistice record for the production of pig-iron was established in August, the production amounting to 752,400 tons, or 2,000 tons more than in July, which was the previous best. The following table compares the production of pig-iron and steel in the first eight months of 1919 and 1920 :—

	Pig-iron.		Steel Ingots and Castings.	
	1919.	1920.	1919.	1920.
	Tons.	Tons.	Tons.	Tons.
First six months	3,954,000	4,145,000	4,264,000	4,877,000
July	641,000	750,400	618,000	789,900
August	521,000	752,400	474,000	709,200

The production of pig-iron included 284,700 tons of hematite, 233,300 tons of basic, 137,300 tons of foundry, and 58,600 tons of forge. The production of steel ingots and castings was adversely affected by holidays.

Cotton in Mesopotamia.—In 1917 Messrs Holland and Wilson were appointed Joint Trade Commissioners for Mesopotamia, and they reported that the soil and climate were well adapted for cotton, and recommended that an expert from India should be deputed to carry out experiments with different varieties. Captain R. Thomas, B.Sc., of the Indian Agricultural Service, was accordingly appointed, and some of the results obtained were published in his Interim Report on Cotton Experimental Work in Mesopotamia in 1918 (Bagdad: Government Press, 1918). Details of work subsequent to that date have now been published. Cotton possibilities in Mesopotamia are, of course, very great, but they seem likely to remain possibilities for a time, since their realisation depends, among other things, on a vast amount of irrigation and drainage, a larger and less roving population, much improved transport, agricultural machinery, and instruction of the natives in best methods of culture. The first experiments by Captain Thomas were undertaken at Karradah, near Bagdad, and this locality proved very suitable both for American and Egyptian cotton, although owing to high temperatures the water requirements of the crop will be higher than in Egypt. Very good results were obtained with Webber 49, a variety showing a remarkable combination of good qualities; but certain other kinds, such as Chanda, 280 F, 286 F, Cambodia, Basra, and Tinnevellies D, were found to be unsuitable. Berseem (Egyptian clover), which is generally grown before cotton in Egypt, also did very well at Karradah. The following table gives detailed results :—

Variety.	Colour and Texture.	Strength.	Staple.	Value.
			In.	Per lb d
1. Cambodia	Soft, lustrous, deep cream ..	Fair	0·9 — 1·1	30·0
2. Punjab 4 F.....	Rather harsh, creamy white..	Fair	0·5 — 1·3	17·5
3. Punjab 280 F.....	Soft, lustrous, pale cream....	Good	0·9 — 1·2	35·0
4. Punjab 285 F.	Soft, lustrous, very pale cream	Fair	0·7 — 1·4	22·5
5. Punjab 286 F.....	Clean, soft, silky pale cream..	Good	1·0 — 1·4	34·0
6. Webber	Lustrous, very pale cream ..	Very good	0·8 — 1·5	27·5
7. Black Rattler	Soft, lustrous, cream	Fair	0·8 — 1·4	23·0
8. Triumph	Soft, lustrous cream	Good	0·5 — 1·3	23·0
9. Allen's Long St'ple	Very soft, silky, nearly white	Fair — good	0·8 — 1·5	27·5
10. Chanda	Soft, lustrous, cream	Fair	0·9 — 1·2	37·0
11. Sakellaridis	Silky, lustrous, deep cream ..	Good	1·0 — 2·0	32·5
12. Afifi.....	Soft, lustrous, brown Egyptian	Good	0·7 — 1·5	31·0
13. Ashmouni.....	Soft, woolly, pale brown	Good	0·8 — 1·5	29·0
14. Basra	Soft, lustrous, cream	Very good	0·8 — 1·1	33·0
15. Turkish.....	Soft, lustrous, pale brown....	Good	0·5 — 1·7	30·0
16. Tinnevelly D.....	Soft, lustrous, cream	Good	0·7 — 0·9	33·0

In 1919 experiments were undertaken on six farms in different parts of Mesopotamia with the most promising varieties, but were not very successful, owing to lack of funds and the saline nature of the soil. During the present year (1920) it is hoped to establish seed farms, and obtain sufficient seed for commercial cultivation in 1921. During a visit towards the end of 1919 members of the British Cotton Growing Association were favourably impressed with the possibilities, and although no definite agreement has yet been entered into with the Government it is understood that the association has already sent ginning plant to deal with the cotton from 200 acres. Labour and water supply are, of course, essential conditions. With regard to the former, it is estimated that the population between Bagdad and Basra is about 1,500,000, of whom 350,000 are town dwellers. It is further estimated that there are about 300,000 acres on the banks of the Tigris and Euphrates which could be irrigated from the rivers themselves, about 80,000 acres by canal irrigation for summer crops on the banks of the Diala, above Bagdad, and about 120,000 acres on the Euphrates controlled by the Hindia barrage. If, therefore, cotton is grown in rotation on about one-third of the summer irrigated land, the area would be about 150,000 to 200,000 acres of cotton per annum. But before this is realised a great deal of work is required, and the next step is with the irrigation engineers. The rainfall varies considerably; the mean annual is about 10 inches, but in 1894 the rainfall was 22 inches, and in 1901 it was only 1.6. The soil generally is light calcareous loam, somewhat similar to the average soils of Egypt, but the temperature extremes are greater than in Egypt.

South African Iron and Steel—One of the foremost topics in industrial South Africa to-day is the possibility of developing a great iron and steel industry. This has been hopefully discussed by some enthusiasts for many years, and reports recently published by Dr Wagner, Professor Stanley, and others, have stimulated optimism in this direction. It is estimated that there are about 24,000,000 tons of titaniferous iron ore, at the surface, at Onderstepoort, near Pretoria, containing from 45-60 per cent. iron, 2-19 per cent. titanium, and some vanadium. It was thought at first that these ores could not be readily smelted owing to the high titanium content, but this difficulty has been got over by the use of lime and silica for fluxing. There is also a very large supply of chromite ore in the same neighbourhood, and magnetite ore extending for hundreds of miles, and probably containing many million tons. Latest information seems to show that this latter ore is not really magnetite, but is more correctly described as martite. The most accessible deposits are at Pretoria and Airlie Station. The sulphur content is low, and an excellent foundry iron should be obtained. Banded hematite ores are abundant in Swaziland, but the silica content is rather high. Whilst most of the valuable ores occur in the Transvaal, there are favourable indications in Natal which demand closer examination, particularly in the vicinity of Maritzburg; and there are some deposits in the Cape Province, but nothing definite is known as to quantity. Manganese is required for modern steel manufacture, and although the necessary alloys could be imported into South Africa, it would be better to use native manganese if possible. Recent prospecting has revealed workable deposits in the Transvaal, one of which is said to be capable of yielding 50,000 tons of ore, containing 20 to 60 per cent. manganese oxide. But the most important deposits are the lateroidal formations associated with dolomite in the Krugersdorf district. Another deposit in the Cape Province was estimated to contain 500,000 tons of manganese ore. In regard to the necessary fuel, this is a rather more difficult problem, for not very much coke of good quality has been produced hitherto in South Africa. Experiments in coke production carried out by Professor Stanley and Dr J. Moir on samples of South African coal gave moderately good results, although not equal to the best British coke. The main source of supply would seem to be Natal, where coke of good quality is already being made in some quantity, and doubtless the output could be increased if there were sufficient regular demand and modern by-product ovens were installed. There is always a good local market for the products—tar, benzol, &c. Charcoal naturally gives a much better iron than coke, and large quantities, up to 40,000 tons of charcoal, could be obtained from South African waste timber and from the wattle industry in Natal. The market for iron and steel in South Africa should be large and progressive, and Professor Stanley has gone into this question very thoroughly. From the 1913 imports he estimates that the total manufactured iron and steel goods imported approximated 300,000 tons, including, of course, many things which could not at present be made in South Africa. Of the things which would probably be made in the Union, namely, bolts, nuts, rivets, bar and angle iron, hand-drill and rock-drill steel, rails, sleepers, points and crossings, steel castings, rock-drill spares, shoes and dies, he estimates the quantity roughly at 100,000 tons. The average consumption of rails alone for the South African railways for the past few years has been about 50,000 tons per annum. He arrives at his grand total by adding this 50,000 to the 100,000, although the rails have apparently been included in the 100,000, and with another 25,000 tons for sundries, Professor Stanley computes the total home demand for iron and steel goods that could be made locally at 175,000 tons. It is quite possible that if the present demand does not reach this amount, it will very soon do so. An attempt is also made to estimate costs of production, but this can only be done very approximately. The cost of freight from Europe and America would probably give the South African producer an advantage of about £5 per ton, and it is unlikely that his costs would exceed those of foreign producers by this amount: the difference between home and foreign costs would very likely be less than £5. One of the latest steps in the development of South Africa's iron and steel industry is the ratification by the Minister of Railways of the agreement with the Pretoria Iron Mines, Limited, associated with the South African

THE IRVING method of tracing an import shipment from the hour the draft or other advice is received, of notifying the consignee of its arrival and presenting the draft by personal messenger in Manhattan, and elsewhere by a banking correspondent on the spot, insures the over-seas shipper or banking correspondent a prompt credit or an immediate report on how the business stands—with effective aid in meeting any emergency which may arise. Operating speed is a vital element in Irving specialized service.

IRVING NATIONAL BANK
WOOLWORTH BUILDING, NEW YORK

LONDON OFFICE: PINNER'S HALL, OLD BROAD STREET

Iron and Steel Corporation. Clause 5 in the agreement provides that the Union Railway Administration shall purchase at least 50 per cent. of its iron and steel requirements from the Pretoria mines. These mines are about 800 acres in extent, situated about three miles from Pretoria, and containing something like 30,000,000 tons of 50 per cent. ore, easily available, and practically unlimited when followed to depth. The Witbank coalfields are near, yielding adequate supplies of good quality coal and coke.

Transvaal Output for August.—The August statistics of gold output in the Transvaal show that the total production of fine gold during the month amounted to 702,083 ounces, as compared with 736,099 ounces in July and 706,669 ounces for August, 1919. The following table shows the production for a number of years past :—

	1916.	1917.	1918.	1919.	1920.
	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.
January	787,467	782,634	714,182	676,059	670,503

Roumanian Currency.—A correspondent writes :—In the early days of September the unification of currency in Roumania has taken place. The counter-stamped kronen notes circulating in Transylvania and in the other Roumanian territories which formerly belonged to Austria-Hungary have been exchanged into lei notes. The rate of exchange was : 2 kronen against 1 leu. This is considered by the majority of the population of the new territories as satisfactory, for they expected a much more unfavourable exchange rate. The exchange rate was kept secret until the very moment of exchange transaction, and the pessimistic public made enormous purchases in the last weeks of August, in order to get rid of their kronen notes. The merchants tried to hide their stores from the public, for they hoped to be able to sell them at better prices after the unification had taken place. In order to safeguard the interests of the consumers the authorities compelled the merchants to keep their shops open. Before the exchange had taken place the rate of lei notes was in Transylvania, in the illegal trade, about 3.60-4.20 kronen. Thus the exchange by 2.00 kronen resulted in the decrease of prices of those goods which used to be imported from the Old Kingdom to the new territories. For instance, the wholesale price of sugar was in Transylvania, before the exchange transaction, about 140 kronen per kilogram, in accordance to its price of 34-36 lei. After the beginning of the exchange transaction its price in lei remained the same, however; this meant only 68-72 kronen. Thus, those merchants who succeeded in hiding the merchandise from the buyers suffered considerable losses. The prices of home products have not been affected by this transaction—*i.e.*, they amount to half as much lei as they amounted in kronen. In spite of this, the trade unions demand that the workmen shall get as high wages in lei as they got in kronen. This would mean an increase of wages of 100 per cent. Apart from this, public opinion is entirely satisfied with this solution of unification problem. Though the population of new territories demanded at public meetings during the preceding few months an exchange of 1 :1, however, this was only in order to effect pressure on the Government, and is generally ascribed to a manœuvre of the opposition. As the Roumanian National Bank did not possess the necessary quantity of lei notes, it afforded cash only for 60 per cent. of the amount exchanged by each individual; for the remaining 40 per cent. it issued *bons* payable within three months. The sudden increase of the lei note circulation, by several milliards, has not affected the Roumanian exchange rate on the foreign markets. The rate of bills on Bucharest was in London during the last two weeks, as follows :—

August	30.....	153–158	
,,	31.....	152–156	
Sept.	1.....	153–157	
,,	2.....	153–157	
,,	3.....	150–155	
,,	4.....	150–155	
,,	6.....	152–157	
Sept.	7.....	152–155	
,,	8.....	155–160	
,,	9.....	158–162	
,,	10.....	165–170	
,,	11.....	160–165	
,,	13.....	165–170	

The lei rate was on September 13th about 12 points higher than on August 30th, yet during this period almost all the Continental exchanges have depreciated similarly. Thus even this proportionately slight depreciation was not caused by the increase of note circulation. The most acceptable explanation of this circumstance is that the territory of circulation of the lei has increased in a still greater proportion than its circulation.

Chile and Peru.—The announcement that the dispute regarding the provinces of Arica and Tacna has been settled is qualified in Chilean official quarters as premature, and has been formally contradicted by the Peruvian Legation in London. But it is regarded in well-informed quarters as foreshadowing eventual and very reasonable terms of settlement. Under the Treaty of Ancon of 1883, following the war between Chile and Peru, the fate of the region was to be determined in 1893 by a vote of the inhabitants, the losing Power receiving 10,000,000 soles, or £1,000,000. The vote has been repeatedly delayed by revolutions in Peru and disputes as to the composition of the electorate; it was announced on Tuesday from Santiago that Chile is to keep the provinces, and to pay Peru £6,000,000. They are of no economic value, but, being chiefly desert, are a barrier against invasion, by which Chile has nothing to gain. President Leguia has expressed a desire to refer the matter to the League of Nations, and Peru needs money; Chile may have some difficulty in finding it at once, but her taxes are light—there is not even an income-tax, and her rich men are very rich. But popular feeling has recently been excited in each country against the other, and the Chauvinist Press in both will probably obstruct a settlement. An additional delay may be caused by the uncertainty of the result of the Chilean Presidential election. Señor Alessandri has a small majority of electoral votes over Señor Borgoño; but, in view of the allegations of corruption, Congress has referred the decision to an arbitral "tribunal of honour," composed of men of high standing and character, whose verdict both parties will accept. The new President takes office on December 24th, but neither candidate is likely to oppose a settlement, and Chile would probably disarm Bolivian opposition (which the Bolivian revolution had made more likely) by ceding territory giving Bolivia the access to the coast which she lost in 1883.

The Remedy for Rubber.—A correspondent writes: The weakness of the market in raw rubber has found little corresponding reflection in the prices of rubber shares. Of course, the market in the latter has been a dull one for some time past, but no shake-out has occurred, and the process of shrinkage goes on very slowly. Raw rubber is now standing lower than it has done for many years past. The quotation that appears in the papers every day is for the best grade of the produce. The average rubber obtained by the majority of producers is of slightly lower quality, so that the 1s 7½d quoted as the present price of rubber applies only to the best grade; for the less fine qualities the price may be 2d to 3d per lb lower. This being the case, it follows that some of the rubber-producing companies must be working at a very slender margin of profit or no profit at all, for costs have been rising, and although giants like the Pataling are able to show expenses which come out at less than 1s a lb for rubber, the same low range of costs does not apply to rubber producers as a whole. In spite of the increased transport facilities, which have been improving since the Armistice, expenses on the estates show a tendency to expand. Though wages may not be advanced to any noticeable extent, the cost of rice supplied to the labourers has gone up materially, and plant, &c., is certainly no cheaper than it was. It is said that even in the Malay States the prevailing tendency at home for agitation in the direction of obtaining increased wages is noticeable on the rubber and tea plantations. The tea companies are, of course, doing badly, owing to a set of conditions that could hardly have been provided against by the most experienced growers. Some of the companies are known to be working at a loss; but the tea trade being peculiarly one in which the curves of profit and loss rush readily from one extreme to the other, it may be expected to regain its equilibrium in the course of time. Precisely the same argument is applied to the rubber industry, closely allied, of course, to that of tea-planting. The abstention of American buyers from the raw rubber market is explainable by reference to such commonplace facts as the decline in extravagance in the United States, to the complexities brought about by the railroad strike in America, and to the knowledge that manufacturers across the Atlantic bought so heavily in the early part of this year as to have rendered themselves overstocked, and, consequently, sellers of rubber rather than buyers. Meanwhile, the plantations turn out their usual quota of rubber, which they are obliged to sell for what it will fetch, simply because they require the money for running expenses, and also because rubber cannot be stored for any length of time without risk of deterioration. The holder of rubber shares, however, is not of the ordinary speculative investment class. In the majority of cases it is true to say that on making purchases of shares he looked several years ahead for the time when he expects to reap substantial returns from his investment. That affairs in the industry have gone contrary to his expectations for the time being is no temptation for him to sell, and he awaits those days when demands shall exceed supply on the opening up of trade with Germany, Austria, Russia and other European countries. The rubber market is working through a barren and unprofitable patch, but the fact of share values falling so little as a whole is evidence of the remarkable faith which supporters of this industry have exhibited in the past. During the next three months the Rubber Growers' Association may be expected to make a strong effort in the direction of curtailment of supplies. We understand that at a recent meeting of the Council, support was lent to the proposal that the producing companies should be approached with all the available statistics relating to the position, and asked to assent to a self-denying ordinance of reduced output similar to that which ruled up to the Armistice in November, 1918. The estimated output of plantation rubber for this present year is put at 337,000 tons, to which must be added another 40,000 tons of wild rubber, making 377,000 tons in all. Of this, the consuming countries are expected to take 350,000 tons, the United States demand being estimated at 260,000 tons, or nearly 75 per cent. of the full total. This would leave a surplus of supply over demand of 27,000 tons, a figure likely to be increased above 30,000 tons, when allowance is made for stocks in hand at the beginning of this year, and what will be carried forward to 1921. This is the position so far as it can be ascertained to-day. Manifestly it shows the Rubber Growers' Association to be on strong ground in making an appeal for immediate curtailment of output. To blame the well-organised American buyers for taking advantage of the necessities of loosely-knit and compulsory sellers is futile. Rubber producers cannot hope for a better price in raw rubber until they agree to bring their output into close correspondence with the actual demand.

Victoria Falls and Transvaal Power.—The accounts of the Victoria Falls and Transvaal Power Co. for the year 1919 again show a decline in profits, on which the report throws no light whatsoever. After allowing for interest and premium on debentures, depreciation and provision for British taxation, the net profit amounted to £175,626, as compared with £224,128 a year ago and £128,413 for 1913. The decline in gross profits was even larger, as may be seen from the comparative summary of results below :—

	1913.	1915.	1916.	1917.	1918.	1919.
	£	£	£	£	£	£
Gross profits	467,824	729,662	800,026	836,301	864 687	789,275
Int. and pr. m. on debs.	203,920	232,557	239,705	236,273	229,715	219,160
Depreciation and income-tax	135,491	274,024	305,714	337,262	410,844	394,489
Net profit for year	128,413	223,081	254,607	262,766	224, 28	175,626
Amount brought forward	96,786	115,987	161,568	72,425	97,691	93,693
Available for distribution	225,199	339,068	416,175	335,191	321,819	269,319
Reserve	..	..	150,000	50,000	50,000	..
Div. 6% cum. partic. pref. shares	6 %	8 %	10 %	10 %	10 %	10 %
Ord. div.	..	..	5 %	5 %	5 %	5 %
Carried forward	105,198	161,568	72,425	97,691	93,693	94,320

No alteration is made to reserve, but the same dividends are paid, and the balance forward slightly increased. The 6 per cent. preference shares are entitled to share *pro rata* with the ordinary shares in surplus profits until they have received a total annual dividend of 10 per cent. There are few changes of importance in the balance-sheet, the principal being an addition of £277,000 to creditors in London, which is balanced by increases in investments.

An Industrial Conference.—A conference, organised by the Industrial League and Council, will be held in connection with the Machine Tool Trades' Exhibition in the Conference Hall, Olympia, on Tuesday next, the 21st inst. The Right Hon. G. N. Barnes, M.P., is to open the discussion on "Unemployment, Production, High Prices and World Competition." The Right Hon. J. H. Whitley, M.P., is to preside over the morning session. Sir George Paish will preside over the afternoon meeting, when the Right Hon. G. N. Barnes, M.P., will submit the latter part of his paper, "High Prices and World Competition."

Conference on the Cost of Living. — The National Association of Merchants and Manufacturers, 14 Mincing lane, E.C., announces that a national conference to consider the cost of living will be held in the Pillar Hall, Cannon street Hotel, E.C., on Thursday, September 30th, at 2 o'clock. Sir Hugh Bell, Bart., C.B., will preside.

British Empire Exhibition.—The British Empire League informs us that the Government has now decided to give the exhibition all possible support, guaranteeing £100,000, subject to £500,000 being guaranteed by the commercial community. Already some of the principal banking, trading and industrial concerns of the Empire have come forward as guarantors, and it is to be hoped that all the leading commercial houses will participate in the guarantee fund. The organisation having now been completed, there is every reason to believe that the exhibition, which is to be held in 1923, will be a pronounced success.

Commercial Education.—Mr Oscar Berry, C.C., F.C.A. has presented to the London Chamber of Commerce a gold, a silver, and a bronze medal to be awarded to the students who have gained the highest number of marks for "Commercial Commodities" in the Junior examinations held by the Chamber during 1920 and succeeding years. Mr Berry, who has also given a silver and a bronze medal for those specially successful in handwriting during the current year, has been a member of the Commercial Education Committee since its formation in 1890.

The Industrial Welfare Society announces a lecture conference for welfare supervisors at Balliol College, Oxford, to be held from September 17 to 20, 1920.

Oversea Correspondence.

UNITED STATES.—RAILROAD POSITION—TRADE AND INDUSTRY—DEAR MONEY.

(FROM OUR CORRESPONDENT.)

NEW YORK, September 3.

One of the most noteworthy developments in this country within the past few weeks is the marked improvement that has taken place in the transportation situation. Although still handicapped by lack of adequate rolling stock, railroads have greatly increased their operating efficiency, and, according to competent authorities, are now carrying a larger volume of freight than ever before at this season of the year. The extent of the improvement may be judged from the fact that during the first week of August some 942,000 carloads of freight were moved, representing an increase of 154,000, or about 20 per cent. over the first week in June, and approximately 70,000 more than in the corresponding week of last year. The accumulation of freight cars has been greatly reduced, as has also the number of deferred car requisitions—commonly referred to as the "car shortage."

The freer movement of merchandise and commodities is responsible to some extent for further price recessions in various directions owing to increased supplies, and is creating a better feeling in business circles generally. The breaking of the traffic jam is also important, in that it is gradually releasing millions of "frozen credit"—in other words, capital tied up in products and raw materials which railroads were unable to transport. The larger volume of business now being handled by the railroads augurs well for increased earnings, especially in view of the fact that the higher freight and passenger tariffs, recently authorised by the Inter-State Commerce Commission, were put into effect on August 26th. Additional proof, if any be needed, that the carriers were justified in asking higher rates is furnished by reports filed with the Commerce Commission, showing results of railroad operations during May. Gross earnings in that month totalled $456,006,543, an increase of $42,000,000 approximately, or about 10 per cent. over May of last year. Operating expenses, however, amounted to $441,031,310, an increase of $85,339,499, or nearly 25 per cent., leaving net operating revenues of only $14,975,233, as against $58,253,638 in May, 1919. Net operating income for the month, after taxes and other charges, showed a deficit of $13,455,871, whereas such income in May of last year was $39,340,216. The operating ratio, which reached 100.72 per cent. in April of this year, declined in May to 96.72—an abnormally high figure, and representing an increase of 10.75 per cent. over the operating ratio in May, 1919. For the first five months of this year the net operating income of all railroads aggregated only $23,600,000 in round numbers, showing a decrease of over $80,000,000 from the corresponding period of last year.

Conditions in trade and industry are still highly irregular. Business generally in distributive lines is quieter than in recent weeks, and in many industries production is being curtailed or repressed pending a clearer outlook for the future. Autumn buying has not yet developed to any extent in any line. Purchases, as a rule, are confined to immediate or nearby requirements, and although stocks of goods apparently need replenishing, there is widespread hesitation in contracting for future delivery owing to the possibility of further price recessions. High money rates and continued restrictions upon credit also tend to retard business activity. The trend of wholesale prices of various commodities, including some staple household articles, has continued downward, but the ultimate consumer is not yet getting the full benefit of the reductions. Among the lines showing the greatest dulness are the silk, woollen, and leather trades, and practically all kinds of wearing apparel, including raw and manufactured textiles. That the readjustment which has occurred in other lines has finally reached the automobile industry is evident from reports of cancellations of orders and lessened activity at various plants. In the iron and steel industry consumption appears to be well maintained, but uncertainty as to how future prices will be affected by the recent sharp advance in freight rates has caused some confusion and restrained forward buying.

Crop conditions generally continue encouraging, although in practically all sections the corn crop needs from two to three weeks of warm, dry weather to assure the full yield now promised. This applies also to the cotton crop, which the Government report this week estimates at 12,783,000 bales, or 1,333,000 bales larger than the July estimate and 264,000 above last month's; such a yield would be the largest crop in five years.

Money continues very firm and scarce, bids of 8½ to 9 per cent. for fixed date accommodations failing to attract any sizable offerings, and borrowers find difficulty in negotiating new loans even in small amounts. Commercial paper is moving in moderate volume, but even the choicest names cannot be discounted under 8 per cent. Banks are feeling the pressure of crop-moving demands, which will continue for a number of weeks, and which are reflected in heavy increases in the Federal Reserve system's rediscounts and outstanding note circulation; both of these items last week reached the highest totals ever recorded. The position of Federal Reserve banks generally is not such as to encourage expectations of any substantial and sustained relaxation in money rates in the immediate future. Call money rates on the Stock Exchange are comparatively easy at present, but they do not reflect actual money market conditions. The reserve ratio for the entire Federal banking system now stands at 43¼ per cent., only 1 per cent. above the lowest of the year, and comparing with 50¾ per cent. a year ago. There has been considerable criticism lately of the Federal Reserve Board's policy with respect to credit restrictions, which it is felt in many quarters have been enforced too rigidly and

to the detriment of business undertakings, that, while legitimate, were not classed as "essential." Evidence is not lacking that the drastic curtailment of loans accomplished more than the original purpose of merely checking speculation; it prevented many merchants and manufacturers from replenishing stocks, held up new enterprises in some cases, interfered with the practice of distributers in selling goods on credit which they had formerly been able to extend by reason of loans obtained from banks, and curbed activity in numerous lines of trade and industry which bankers considered "non-essential." Such, at any rate, is the gist of current complaints.

In the securities markets the outstanding feature is the activity and strength displayed by railroad bonds and shares, which, as a whole, have been dormant for many weeks. Advances in these issues, carrying many to new high levels for the year, are the result of increased investment and speculative buying, based on the larger earnings that seem to be assured by the higher freight rates now in effect.

FRANCE.—COST OF LIVING—TRADE OUTLOOK—SWITZERLAND AND FREE ZONES—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, September 14.

THERE is as yet no sign of any reduction in the cost of living, which is now stated to be 269 per cent. higher in Paris than in 1914, and 279 per cent. higher in the provincial towns (as compared with 162 per cent. in England and 353 per cent. in Belgium). The figure for Paris stood at 106 per cent. in July, 1918, and at 161 per cent. in the corresponding month last year. Many articles of common necessity, indeed, are steadily increasing in price, particularly meat, which is expected to reach 20f per kilogramme early next year. Bread is now sold at 1f 30c per kilo., while sugar, which is now free from official control, is sold at 6f per kilo. There are still large stocks of commodities in the country that were bought at high prices, and there can be no doubt one reason for the continued rise in the cost of living is to be found in the fact that these must be liquidated before prices will come down, coupled with the heavy increased taxation that has now come into force, and that will to a great extent be passed on to the consumers of these high-priced commodities. A typical example of the difficulties of the present situation was offered recently, when the members of the Paris retail boot and shoe dealers' organisation held a meeting, at which a resolution was brought forward pledging the retailers to suspend their orders for new goods until the manufacturers were prepared to sell at lower prices. Representatives of the manufacturers who attended the meeting retorted by informing the retailers that if they embarked upon such a policy the members of the wholesale trade were prepared to open retail shops forthwith and sell direct to the public at from 30 to 40 per cent. below present retail prices, this difference representing the retailer's profit. The threat proved sufficient to bring about the withdrawal of the resolution in question, and matters are continuing on the same basis as before.

In a recent interview M. Isaac, the Minister of Commerce, predicts a very active revival of business in this country next month, after the close of the holidays. The symptoms of this revival, he states, are already noticeable. One of the most favourable factors in the situation is the improvement in the arrival of German coal (probably due, to some extent, to the movement here in favour of an occupation of the Ruhr coalfield by France). The improved deliveries of coal, M. Isaac states, is already enabling industrial undertakings to increase their output to over four-fifths of the normal pre-war rate. "On the other hand," added the Minister, "our harvest will not be so good as we hoped. This is regrettable, because good harvests foster the prosperity of industry, and produce money for expenditure. As a matter of fact, people are spending money very freely to-day, and often because they do not wish to hoard their paper money. Many people, especially in the country, prefer to put their savings into material objects of whose value they feel sure. It is for this reason so many of our peasantry are now buying furniture and other articles which they formerly did without."

The object of M. Millerand's visit to Lausanne this week is one of peculiar interest to France, for it is understood that it concerns the hoped-for abolition of the so-called "free zones" that have for many years existed in French territory in the districts bordering on the Lake of Geneva, in the Department of Haute-Savoie, south-east of the lake, and in the district of Gex, on the north-west. These districts, which are five in number, were placed by the Treaty of 1815 under the political control of Switzerland in the interest of the then Kingdom of Sardinia. When Savoie was reunited to France in 1860, Swiss political control came to an end, but the situation of the districts remained sufficiently abnormal for Switzerland to be able, in 1914, when war broke out, to insist that they should continue to be regarded as neutral territory. The effect of this claim was that the French Government did not dare send any of its wounded into the hospitals of Annecy, Annemasse, Aix-les-Bains, and other towns for fear of the Swiss authorities, in spite of the fact that the Haute-Savoie is a French Department, should insist on interning them until the end of the war. By the Treaty of Versailles France has recovered full political right over the whole area concerned. The five districts, however, still remain exempt from all Customs duties of any kind, as a result of the plebiscite taken in 1860, when the inhabitants elected to become French on the express condition that no Customs duties should be levied in the areas in question. The effect of this curious anomaly is that, although the whole department forms part of the French Republic, there are certain portions of it which German, Italian, Swiss, and other goods can enter free of all duty. Under this peculiar state of affairs France is deprived of a market with a population of 200,000. The loss to the French Customs revenue in these districts was estimated at some 40,000,000f in 1905, and may now be placed at thrice that figure. It was estimated before the war that German goods were entering this part of France, free of all duty, to the extent of 30,000,000f a year. It is hoped here that, even at the cost of a heavy sum as compensation to the inhabitants, M. Millerand's visit to Lausanne may bring about the reinclusion of this territory in the French Customs revenue.

The Bourse this week has been markedly firmer than last, despite the serious problems that remain pending in Russia, Ireland, England, and Italy. The political situation, however, is not sufficient to explain the marked firmness of the Bourse; and unfortunately, from the French point of view, it is rather more due to the fact that sterling, dollars, pesetas, and florins have been appreciating, while at the same time there has been a notable increase in the issue of French paper currency. Naturally, the rise has been more marked in foreign securities. French State securities have slightly declined, the 3 per cents. dropping form 50.65 to 50.60, the 1907 and 1918 4 per cents. from 70.35 to 69.85 and from 71.05 to 70.55. Banks have been well supported, Banque de Paris, for instance, running up from 1,708 to 1,765, and finishing at 1,755. Transports generally have improved, Métropolitain

being at 320 as against 310; shipping descriptions, however, are more depressed, Messageries dropping from 432 to 425 and Chargeurs Réunis from 1,310 to 1,275. Metallurgical undertakings have also drooped, Longwy being back again at 1,900 from 1,950 and Chantiers de la Loire from 1,685 to 1,610. Tintos advanced from 1,678 to 1,740, and Boleo from 902 to 970. Mexican Eagles are up from 591 to 622, Shell from 398 to 433, Royal Dutch from 39,650 to 39,900, and the rest similarly.

The returns of the Bank of France for last week, the previous week, and the corresponding week of 1913 are as follows :—

GERMANY.—COAL SOCIALISATION—EXCHANGE AND BOURSE—TRADE—UNEMPLOYMENT—PRUSSIA'S CROPS.

(FROM OUR CORRESPONDENT.)

BERLIN, September 9.

A VERY minute further step towards socialisation of coal mining and coal trade was this week made by delivery of the report of the Socialisation Commission. The Commission, under chairmanship of Karl Kautsky, first sat immediately after the Revolution, and rendered a report unfavourable to nationalisation of any industries, and on the whole unfavourable to immediate socialisation in other forms. The only Socialistic law passed after the Commission's first report concerned electrical power distribution plant and certain large power stations, which the Federal Government was authorised to acquire against compensation. In the cases of coal, iron, potash, and coal-tar the Government proceeded on the alternative (Wissell-Moellendorf) lines of creating compulsory all-German private syndicates, and putting them under control of councils representing equally employers and employed in the producing, trading, and consuming branches. The Commission's labours were suspended last year. In March, after the Kapp revolt, the trades unions, as their condition for breaking off the general strike, required that the new Mueller Cabinet should reconvoke the Commission. The re-established Commission has continued to oppose coal nationalisation. The majority's report, drafted by Walther Rathenau, chief of the General Electricity Company, recommends that the removal of coal mines from private hands should take place only after 30 years. Meantime, the present management system should be altered, and profits limited. The management and trading functions at present exercised by the all-German Coal Syndicate (Verband), which is practically a private Trust, should be transferred to the representative Council, and instead of the profits of the component companies in the syndicate being limited as at present merely by fixing maximum prices (with sanction of the Ministry of Industry), profits should be rigidly limited to (1) interest on debts secured on the mines, and (2) interest on capital invested. The rate of interest is not stated. As inducement to mine-owners to pursue efficiency premiums would be given for cutting down working expenses, and for increasing output. The opening of new mines would be a monopoly of the Council, but the new mines might be fused with existing private concerns. The Commission's minority report recommends immediate acquisition of all coal mines, against fair compensation, the mines to be owned and worked, not by the State, but by a representative syndicate with the status of a public company.

The coal supply question continues serious. The Government has sent to Paris a Note stating that the fall-off in Silesia's production, owing to the disorders and strikes, makes unrealisable the condition precedent of the Spa agreement, which was that production should not fall off. The Note makes the Allied Governments responsible for the decline. In August, Germany delivered 1,978,645 tons out of the 2 million tons agreed upon at Spa. Upper Silesia delivered 38,000 tons less than was estimated; all other districts delivered a little more than the estimates. The Ruhr output in August was 7½ million tons against 6½ millions in August, 1919. At present American coal, at a price of $30 a ton free Rotterdam, is being imported, but only for such industries as can in this way immediately increase their exports, and so pay for the imported coal. The Federal Coal Commissioner has issued a gloomy summary of prospects for the winter.

The last Reichsbank report (for fourth week of August) shows a heavily increased strain on the Bank's resources, and a tremendous increase of paper circulation. Against increase of 3,721.6 million marks in public moneys the Bank lost 4,977.1 million marks, showing net increased demands of 1,255.5 million marks. The note circulation increased by 1,748 million marks, and the "Kassenschein" circulation by 184.7 million marks, as against only 238.7 million marks and 101.4 million marks in the same week of 1919. The Government still show lack of energy in getting in taxes. The abundance of money continues, and this and a continued slight rise in the foreign exchanges tended during the week to keep bonds and stocks up. The quotation average has nearly regained its highest point of the late winter. Up to September 4th the sum quotations of 25 leading banking, industrial, and shipping stocks and 10 leading loans moved as follows :—

	Sept. 1, 1919.	Jan. 2, 1920.	Mar. 1, 1920.	May 3, 1920.	June 1, 1920.	Aug. 7, 1920.	Sept. 4, 1920.
Stocks	5,424	7,792	12,311	10,557	8,533	11,488	11,820
Loans	963	975	1,411	1,112	1,024	1,052	1,198
Together	6,387	8,767	13,722	11,669	9,557	12,540	13,018

During the week the Berlin Bourse had a couple of weak days, the immediate cause of which was the Socialisation Commission's report; but to-day the Bourse was again firm under the influence of competing buying of mining stocks by would-be fusers, and of the reported transfer of control of the much-speculated-in Steaua Romana to an Anglo-Franco-Roumanian syndicate. A further influence was a number of favourable dividend declarations by industrial companies. Speculators ignored the fact that this prosperity was reaped mostly during the great price rise of the past winter, and was discounted by the simultaneous rise in stocks which lasted until March.

The Government has finally refused to abolish in principle the export duties imposed on May 10th, but has been asked by a Reichstag Commission to revoke at least the duties on such German exports as at present have difficulty in finding markets. The Minister of Trade informed the Commission that the present German industrial crisis

is only part of the world crisis, but added truthfully that in Germany the inflation and the multitude of State departments and officials have doubled the evil. Improvement is still being reported from the textiles and boot and shoe branches, and there are signs of reanimation in the western iron and steel industry. The mark exchange drop is encouraging foreign buyers, and there is a large demand for construction iron, steel rails, iron bars, wire, and heavy plates. Sweden and Denmark are buying for delivery to Soviet Russia, and French and Belgian orders come in. The ore supply is sufficient, but owing to now week-long difficulties in getting French minette smelters are turning more and more to Sweden and Spain. The price of scrap iron, which rose to 2,800 marks a ton at the height of the February boom and fell in June to 725 marks, is again rising. The cotton industry is affected by the heavy price fall in world markets, and by a crisis in the important Czecho-Slovak cotton trade, caused by over-buying American cotton at maximum prices. Bremen reports that it is over-stocked with cotton; that Americans are offering to sell on easy payment conditions, and that English firms are offering Egyptian cotton and also promising exceptionally favourable terms. Unemployment is increasing. The last official report, for August 1st, shows 396,699 publicly supported unemployed (families not counted), against 321,326 on July 1st. The textiles branch had in July 17 per cent. of unemployed, the wood branch 10.4 per cent. These figures have since increased. The Government has decided to allot 50,000,000 marks more for unemployed help. The Economical Committee of the Reichstag is considering a plan for settling urban unemployed on the land. As result of the growing unemployment a considerable growth of zeal for work is reported from several districts, and there are fewer strikes.

The first full report (coming up only to April) on cost of living shows that the expense of maintaining a family of five for four weeks at existence minimum level rose from 465.53 marks in December, 1919, to 913.38 marks in April. This figure is for Berlin. The rise in living cost has differed very much in different centres, varying in February-April from 6 to 62 per cent. The increase in cost was accentuated by unsuccessful transactions of municipalities, which bought rationed foods too heavily when prices were highest, and after the price fall were obliged to charge the public higher prices than those of illicit traders. A Prussian Statistical Bureau report on the basis of conditions at beginning of September shows the harvest to be fairly satisfactory. The yield per hectare in double-centners this year as compared with 1919 is :—

	1919.		1920.
Winter wheat	17.8	....	17.1
Spring wheat	16.1	....	17.0
Spelt	12.1	....	11.2

Oats	15.7	....	15.5

ITALY.—THE INVASION OF METAL AND ENGINEERING WORKS AND AN EXPERIMENT IN COMMUNISM.

(FROM OUR CORRESPONDENT.)

TURIN, September 12.

ON Wednesday, September 1st, the metal and engineering workers occupied the workshops in which they were employed and started an experiment in Sovietism which will be perhaps of the utmost consequences to our country. This was not the first time that workshops were occupied by the men; early in the year the cotton mills of Mazzonis Brothers, Turin and Pralafera (Pinerolo), were similarly occupied, but a Government Commissary instantly stepped in, and the works were eventually returned to the proprietors. To-day we have not a single case; the whole of the metal and engineering industry of Italy has seen its works occupied; it is said that the workers implied in the strife are 500,000 or more. Another precedent may be found in the occupations of land, which were frequent in the past autumn all over "Campagna Romana"—the territory around Rome—in Sicily and in the south provinces. The land occupations were legalised by a decree, which prescribed the conditions under which the prefect (head of the province) can concede, even against the will of the land-owner, the land to labourer co-operatives. In principle, the land must be untilled or badly farmed; in fact, the labourers wish to have the best lands, or, at any rate, lands which can give good crops.

In the metal and engineering industry the question was primarily one of wages. In July last negotiations began, consequent upon a request by the F.I.O.M. (Italian Federation of Metal Workers) that the scale of wages, of promotions and kindred questions should be revised. The F.I.O.M. alleged that the increase of wages since 1914, said to be 250 per cent., had not kept pace with the increase in the cost of living, which the municipal statistical labour offices of Milan, Turin, and Rome estimated to be 350 per cent. Wages in other industries were said to be higher than in the metal shops. The A.M.M.A. (Federation of Metal and Engineering Employers) replied that the increase of wages was abundantly equal to the increase of the cost of living; that the examples of higher wages quoted by the employees' federation were misleading, as they related to exceptionally qualified workers, and, by a review of facts and figures, endeavoured to prove that the industry was not in a condition to grant even the smallest concession, as that would spell ruin to most of the federated employers, who had to face the current prices of world competitors.

Upon this reply the negotiations were interrupted. The men did not go on strike; instead of striking the F.I.O.M. proclaimed *ostruzionismo,* that is, "ca'canny." Usually obstructionism is a practice of individual workers. In Italy "ca'canny" had already been used by public employees in State railways, post, telegraphs and telephone, and several tax departments, and was legally justified by the employees, as they claimed to observe exactly regulations which are enacted for general guidance, but cannot be always observed too literally without undue loss of time. In private industry this was the first time that "ca'canny" was officially proclaimed by unions as an industrial weapon. After 15 days the results were disastrous; the productivity of men sank to 50, to 25 and less per cent. Continuous bickerings resulted between men, foremen, and employers. On September 1st the director of Romeo Works (Milan) requested that shops should be protected by public force, and dismissed some men. The F.I.O.M. instantly replied ordering the men to occupy the metal shops all over Italy. As the public force, excepting in the Romeo case and in two or three other cases, was absent, the invasion was peaceful, and the workers found themselves masters in the works. Truth is not easily found as to proportion of the employed which took part in the invasion. But it is probable that the great majority of the workers and a small minority of the foremen and administrative staff were among the invaders.

At this point the issue ceased to be one only of wages. The leaders of the F.I.O.M. apparently conceived the "ca'canny" practice, and the subsequent invasion, only as tactical moves towards attaining the end of higher wages; but the workers set to themselves higher aims. At Turin the F.I.A.T. motor-car shops were newly styled *Fiat-Soviet.* A Communist government of production, after the Russian fashion, is being attempted. In every shop a *consiglio di fabrica,* a works soviet, is instituted, and the workers claim to work for themselves only. A difficult task indeed. In vain they endeavoured to attract foremen and administrative staff; a small minority responded. A few members of the higher technical staff were captured, but after a few days they were obliged to release them. Another difficulty instantly presented itself in the supply of coal, oil, iron and steel, and other raw materials. The problem is being solved by the invasion of other shops, which produce goods necessary for production in the invaded ones. With the aid of State railway servants cars full of raw materials are being introduced in the workshops. But the end of the experiment is not distant. Already part of the shops work at a very low pressure; in others the end of raw materials is in sight. The problem of wages is also insoluble. Employers have not left in their offices any money, and naturally have refused to pay wages for the period during which they are expelled from their property. A few hot-heads among the invaders talk of invading banks. But the Government, it

is hoped, will interfere, and put a stop to an adventure which is an open defiance of the laws of the land. The crisis will be hard to solve, as the A.M.M.A. proclaim its resolve not to recommence negotiations if the workers do not first leave the occupied shops. The workers are full of hope of the advent of universal Communism. They have entrenched themselves in the works. Instead of producing the usual products of industry they are forging arms and ammunition, and a Red guard has been formed to defend the works against the possible inroads of public force. The workers are subjected to military discipline, and every day they are called to military exercises in the shop yards. Civil war seems impending. In the meantime the Government seems absent. It has proclaimed its neutrality between the two belligerents, but this profession is hardly compatible with toleration of assault on private and public property, organisation of armed forces, &c. Perhaps all this tumult will end in a compromise or in a farce, and Signor Giolitti will gain new laurels as a skilful Fabius Cunctator. But the matter is too inflammable; the official Socialist party (156 members out of a total of 508 Deputies of the Lower House) has always been bent against the war in years past, and is the only organised Socialist party in Europe which is to-day uncompromisingly for Russia and Communism; the old guard of Socialism are discredited in face of young enthusiasts, and do not dare to oppose a strong stand against dangerous experiments. It is not, however, probable that the Communist experiment will be made this time. Italians are not apt to stretch things to their extremes. They are a compromising folk, somewhat after the manner of Britishers, though only after a shower of high words and extravagant menaces. Above all, we are a nation of small land-owners, in which the propertied classes outnumber the true proletariat. They need only a strong Government, strong in ideas and leadership, to put matters right.

POLAND.—FOOD PROSPECTS AND THE BOLSHEVIK INVASION — SUBSCRIPTION TO THE POLISH LOANS—THE WORKING OF THE RAILWAYS—PEACE PROBLEMS — EASTERN GALICIA —OIL AND POTASH.

(FROM OUR CORRESPONDENT.)

WARSAW, September 8.

THE damage done by the Bolshevik invasion to Polish agriculture is very great. A part of the crops has been destroyed and the food outlook is very bad. Probably during some year Polish economic life will feel the consequences of the ravages done by the Red Army. In some districts there is not even a sufficient quantity of seed left, and as the time for sowing of the winter cereals is already now very late, there are fears that one part of the arable fields will remain uncultivated. This will naturally entail the loss of a part of next year's winter crop. The Bolsheviks have taken away all horses they could get, and in the northern districts of Poland the decrease of horses amounts to 30-50 per cent. The Government is making endeavours to import motor-ploughs, and some of them are already on the way.

While the Bolsheviks have thus caused great damage, they have contributed very much to the success of the Polish national loan. Until July only two milliards were subscribed, but since the invasion the subscription has risen by six milliards. Probably at the end of this month the subscription will be closed. The Ministry of Finance is already announcing a forced loan. All persons possessing a certain capital or revenue will be obliged to subscribe.

INDIA, BURMAH, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.

On **Current Accounts** interest is allowed at 2 per cent. per annum on daily balances.

In the United States 20 million dollars have been subscribed to the Polish loan floated there. This is certainly a proof of the great patriotism of American Poles, because the loan is only at 6 per cent., while the Swiss loan floated at about the same time in New York is 8 per cent. The Polish Government has opened now a new subscription by raising the rate to 7 per cent.

One of the brightest aspects of Polish economic life is certainly the railway system, which has been brought to a high degree of efficiency. Only a few wagons were left to the Bolsheviks, and almost the whole rolling-stock has been saved.

Four problems are in the foreground of the discussion relating to the conditions of peace: the problem of the Ukraine, of White Russia, of Vilna, and of Eastern Galicia. As regards the Ukraine, almost all parties agree that the experiment of creating an independent Ukrainian Republic cannot be repeated.

Similar is the attitude of public opinion as far as White Russia is concerned. Here, however, the tendency of saving the country, which in a great part is inhabited by a Roman Catholic population, culturally gravitating towards Poland, from destruction by the Bolsheviks is more pronounced. But here, too, all parties agree that this aim should be pursued at the Peace Conference and through international intervention, but not by armed force. Public opinion is more divided in discussing the problem of Vilna. Though there is a general agreement as to the question that this town, where the majority is Polish, almost the rest Jewish, and where the Lithuanian population forms a quite insignificant proportion, should belong to Poland, the parties are divided as to the methods of attaining this aim. The Socialist party is in favour of a peaceful settlement between Poland and Lithuania, while the National Democratic party is advocating a march on Vilna.

As regards Eastern Galicia, there is hardly one Pole who would agree to a cession of these provinces. Eastern Galicia has belonged since the fourteenth century to Poland, and it has been a stronghold of Polish national life in the East. The capital (Lwo'w) is purely Polish, and only the surrounding country Ruthenian. She is famous for her oil resources, which are one of the very few goods Poland can export at this moment. Without petroleum the Polish trade balance would be in a still more desperate position than now. Eastern Galicia possesses also potash mines. The quantity of this mineral, which is of such great importance for agriculture, is estimated at 1½ million tons. Production is steadily increasing. In 1913, 1,200 tons were produced; in 1920 in the first quarter this amount has already been reached. The Government has a share of 70 per cent. in the undertaking. On political grounds it is argued that the cession would cut off Poland from Roumania, and that the new corridor formed between Czecho-Slovakia and Russia would be a death-blow to the Polish independence. The two countries (Czecho-Slovakia and Russia), having a direct contact between themselves, would certainly crush Poland. The Polish Press rejects equally a 15 years' mandate of this territory, after which the population should decide its fate. It is argued that such a mandate would necessarily involve a national strife of the same kind as arose in the plebiscite districts of Upper Silesia, Eastern Prussia, &c. It is denied that under such conditions a normal administration of the country could be possible.

CANADA.—CROP REPORTS AND YIELDS—BUSINESS CONDITIONS—CANADIAN CAR AND FOUNDRY CO.'S AFFAIRS — BRITISH ENTERPRISES IN CANADA—THE RAILWAY RATE CASE AND THE G. T. ARBITRATION — TRADE RETURNS—THE EXCHANGE SITUATION—STOCK MARKETS AND FINANCIAL OUTLOOK — OFFICIAL REDUCTION IN PRICE OF VICTORY BONDS—RISING REVENUES FROM NEW TAXES.

(FROM OUR CORRESPONDENT.)

OTTAWA, September 3.

HARVESTING operations are now well advanced in every province of Canada and the reports received by the Dominion Bureau of Statistics from its various expert correspondents confirm the earlier estimates of a crop, which, while possessing certain deficiencies, is exceedingly satisfactory. The safe assurance of a good crop has stimulated trade in the Western provinces, and wholesalers in the cities are faced with a plentiful flow of orders from country merchants, especially in groceries and hardware. Business, however, in the boot and clothing lines still continues backward. The trade revival has not yet reached the East on the same scale, but there are signs that it is imminent. Retailers are doing a much better business, and will be forced to renew their stocks in most cases before the end of the current month. Merchants find, however, that they have to push business to effect sales in the clothing lines.

The affairs of the Canada Car and Foundry Company, in which many British investors are probably interested, are attracting some attention. Some time ago it came largely under American control, and a new directorate was appointed. The result was a close affiliation with the America Car and Foundry Company. On the preferred stock of the Canadian Company there are now dividend arrears amounting to 22¾ per cent., and plans for their liquidation have been under consideration. No decision was reached at a recent meeting of the board, but it is understood that the majority favour a plan to issue 7 per cent. income bonds in lieu of cash. Owing to a labour dispute the Montreal works of this corporation are now shut down, but its officials claim that they have almost $40,000,000 of unfilled orders on their books and that the fact of their requiring working capital to the extent of $15,000,000 is the sole reason for their failure to liquidate the arrears in cash.

The big plant of the Baldwin's Canadian Steel Corporation, while it will utilise a large establishment erected during the war by the British Government for the manufacture of munitions, is now almost ready to commence operations. They have found difficulty in getting assurance of the necessary supply of 20,000 horse power, which was a preliminary condition of their location in Toronto, and Col. Sir C. Wright, who has been representing them here, states that whereas it was originally intended to instal 40 mills plans have for the time being been reduced to one unit of eight mills. Tinplate will be the chief product, and the company in 1919 received the encouragement of a substantial increase in the tariff protection on this article.

Numerous British manufacturers are examining the prospects which Canada offers. Sir Alexander Maguire, head of the English firm of Maguire, Paterson and Palmer, has now completed plans for the erection of a large match factory in Canada, in which the original investment will be $5,000,000. It will be practically a duplicate of his company's new plant at Garston, near Liverpool. It is to be managed by a board of twelve, of whom six will be Canadians, Sir Lomer Gouin and Mr George Cahoon, president of the Laurentide Pulp and Paper Company, being the first two to be chosen. The new plant will be worked in close co-operation with the Laurentide Company, and the raw material for its matches will be the pine which is not usel in ordinary pulp and paper mills, but for sulphate pulp, which the Laurentide Company does not produce.

The railway rate inquiry has now been concluded, and a decision is expected in the near future. There is no doubt but that a substantial increase in rates will be granted by the Commission, but it is not now expected that the full demands of the railways will be conceded. The prospective increase and the favourable crop reports have generated some activity in C.P.R. stocks. Preparations are steadily going ahead for the commencement of the Grand Trunk arbitration proceedings, and they should be under weigh within a month. Ex-President Taft was in Ottawa to attend the meeting of the Canadian Bar Association, and it is understood that he took the opportunity to hold a preliminary conference with his co-arbitrators, Sir Thomas White and Sir Walter Cassels.

The latest trade figures still continue to be unsatisfactory, exports showing a decline and imports a steady increase. The chief advance is in importations from the United States, which reach a very large figure. A partial reason is to be found in the filling of deferred orders, and in the desire of importers to lay in their supplies before higher freight rates come into operation in both countries. The high premium on New York funds, which, however, for no apparent reason, has fallen several points in the last few days, has had no effect in checking the volume of importations from the United States, but American exporters have realised that it would be difficult to retain their Canadian trade indefinitely, especially if a fall in ocean freight rates accompanied the rise in railway rates, and made British competition more formidable. More than one important American firm doing business in Canada has offered to share the burden of the adverse exchange with its Canadian customers, but the question has arisen whether, if the rebate is more than 5 per cent., the Customs Department at Ottawa might not be entitled to enforce the dumping clause on the ground that the exporter was securing for his goods less than the fair market price in the country of production.

During the past weeks the tone of the Canadian stock markets has been fairly firm, but there has been a complete absence of bullish sentiment. Trading has been on a very limited scale, and the low record for a single day's transactions established in March has been narrowly approached. As threshing operations are now in full swing in the West, the banks are tightening the reins of credit, and money can be procured for investment purposes only at very substantial rates of interest. The financial stringency is even more pronounced in Montreal than in Toronto, and in the former city the banks are asking for very heavy margins on loans.

The Finance Department at Ottawa, which enjoys the advice of a consultative committee of leading financiers and brokers, announced on August 30th that prices for the various issues of Canadian Victory Loan bonds had been reduced to the following levels, in accordance with the stabilisation plan adopted some time ago.

Issue.	New Price.	Interest Yield. %
1922	98	6·37
1923	98	6·15
1924	97	6·27
1927	97	6·00
1933	96½	5·88
1934	93	6·24
1937	98	5·68

The official announcement states that this reduction will bring Canadian Government issues well into line with normal world conditions, and adds the information that since the close of the last loan 135 million dollars' worth of Victory bonds have been redistributed among investors. It is hoped that the new prices will assist in the absorption of any floating supply.

The new taxes are beginning to make their presence felt in the Inland Revenue returns. They show collections for the month of August amounting to $11,374,290, as compared with $5,251,801 for August, 1919, the net increase being over $6,000,000. The new sales and luxury taxes are mainly responsible for the increase, and a conservative estimate places the inland revenue receipts for the current fiscal year at at least $120,000,000, as compared with $58,900,000 last year. If a certain laxity and carelessness in connection with the payment of the new taxes can be checked, the inland revenue returns may even reach $150,000,000.

AUSTRALIA.—TRADE RETURNS—COMMONWEALTH LOAN—DEARER MONEY.

MELBOURNE, August 9.

A PRELIMINARY statement of Australian imports and exports for the 12 months ended June 30, 1920, shows totals comparing with those for the three previous financial years as follows :—

	1916-17.	1917-18.	1918-19.	1919-20.
Imports—	£	£	£	£
Merchandise	76,029,772	60,848,065	94,970,554	97,401,267
Gold	198,907	1,486,384	7,364,605	55,632
	76,228,679	62,334,449	102,335,159	97,456,899
Exports—				
Merchandise	86,343,185	75,035,222	106,795,815	144,258,627
Gold	11,612,297	6,393,999	7,168,161	4,305,896
	97,955,482	81,429,221	113,963,976	148,564,523

Exports have increased during the past 12 months owing to the greater shipping facilities, but the figures do not yet correspond with the payments received by Australia, as at June 30, 1920, there was again a considerable quantity of wheat and wool awaiting shipment, for which the British Government had already made payment. The large excess of exports over imports during the past 12 months, together with the prepayments against future exports by the British Government, has resulted in a considerable accumulation of Australian balances in London, after allowing for interest and other payments to be made on Australian account, and the banks are finding profitable employment for their London balances at the rates now ruling. The above figures show large gold imports in 1917-18 and 1918-19, particulars of which have only lately been disclosed. During 1917-18 the imports included £250,000 from Japan and £643,884 from South Africa, and during 1918-19 they included £4,337,846 from South Africa and £1,498,074 from India.

The campaign for the "Second Peace Loan" of the Commonwealth, "for the payment of war obligations and for repatriation purposes only," was started on August 6th, when the Prince of Wales bought a bond, "as evidence of his strong sympathy with returned men of Australia." The loan is for £25,000,000 at 6 per cent., subject to Commonwealth taxation, but free of State income-tax. Principal will be repaid on December 15, 1930. The price of issue is par, and after allowing for a slight discount in the form of accrued interest, the yield to the investor is a little over £6 1s per cent. Subscribers are offered the right to convert previous issues into the new loan at par up to the amount of their fresh applications. Arrangements have been made with the banks to advance up to 90 per cent. of the amount applied for by customers who have a good prospect of paying the money within 18 months, these special advances being at 5 per cent. interest. The loans raised in Australia by the Commonwealth Government since it began borrowing for war purposes in 1915 have been as follows :—

	Interest.	Amount.
	%	£
August 31, 1915 (due December 15, 1925)	4½	13,389,440
January 31, 1916 do	4½	21,655,680
August 1, 1916 do	4½	23,587,650
February 8, 1917 do	4½	21,584,020
November 2, 1917 (due December 15, 1927)	4½	21,213,780
April 10, 1918 do	4½	36,327,380
	5	6,623,740
October 15, 1918 (due September 15, 1923)	5	44,089,010
October 7, 1919 (due December 15, 1927)	5	25,025,000
Total, eight issues		213,495,700

The 4½ per cents. are free of Commonwealth and State income taxes, but the 5 per cents. are subject to Commonwealth taxation. Issues of war savings certificates and stamps have also been made, and after deducting redemptions, the net amount outstanding on account of war loans and war savings certificates on June 30, 1920, was £212,760,000. Adding indebtedness in various forms to the British Government, £92,280,000, accrued deferred pay £260,000, and war gratuity (estimate) £30,000,000, the gross war debt is £335,300,000, exclusive of the new loan, subscriptions for which close on September 6th.

An advance of ½ per cent. in bank deposit rates took place on July 24th, the new rates being 3½ per cent. for deposits fixed for three months (where deposits are accepted for that period), 4 per cent. for six months, 4½ per cent. for 12 months, and 5 per cent. for two years. The advance has been followed by a hardening in rates for lending. The movement followed an advance of ½ per cent. announced at the turn of the half-year in Savings Bank deposit rates by the Commonwealth Bank and by the two principal State Savings Banks. During the last few months fresh local borrowings by most of the State Governments have been made at 5½ per cent., free of both State and Commonwealth income taxes. The exemption of State securities from Commonwealth income-tax is based upon constitutional grounds to which the Commonwealth Government has assented as a matter of administration since it introduced its income-tax, though the matter has not been tested in Court, but the exemption is viewed with jealousy by a number of members of the Commonwealth Parliament.

JAPAN. — SEVEN MONTHS' TRADE — ADVERSE BALANCE STILL INCREASING.

(FROM OUR CORRESPONDENT.)

TOKYO, August 10.

WITH the close of the seventh month of the year Japan's trade returns still show an adverse balance, though it was not so large in July as in each of the previous months. The margin of imports over exports for July amounted to only 2,338,000 yen, but it brought the adverse balance for the seven months up to no less than 480,906,000 yen. The total value of trade for the period ending July 31st amounted to 3,067,220,000 yen, as against 2,202,402,000 yen for the same period last year, showing a gain of 864,813,000 yen, the bulk of the increase being in imports, as may be seen from the following table :—

	Jan. to July, 1919. Yen.		Jan. to July, 1920. Yen.
Exports.....	1,008,629,000	....	1,293,157,000
Imports.....	1,193,773,000	....	1,774,063,000
	2,202,402,000	....	3,967,220,000
Adverse balance	185,144,000	....	480,906,000

The total value of exports for July reached ¥54,320,000 yen, against 181,210,000 for the same month last year, a decrease of 26,890,000 yen; but imports reached a value of 156,653,000 yen against 144,403,000 yen for July last year, a gain of 12,255,000 yen. And thus the aggregate of Japan's foreign trade for July was 310,978,000 yen, as against 325,613,000 yen for the same month of 1919. The balance against Japan for the month under review was only 2,338,000 yen, but in July last year Japan enjoyed a favourable balance to the amount of 36,807,000 yen. Movements of gold, however, were favourable to Japan, notwithstanding the contrary trend of foreign commerce, imports of specie amounting to no less than 25,670,000 yen against an export of only 1,429,000 yen, leaving 24,241,000 yen in Japan's favour.

The decline in exports was due mainly to the big slump in silk, the principal item of Japan's export trade. Exports of raw silk totalled only some 26,000,000 yen this July, whereas in the same month last year it reached more than 55,000,000 yen. Waste silk and silk tissues also registered a heavy decline, and the same may be said of such important items as silk fabrics, rice, beans, peas, copper, starch, beer, timber, leather goods, matches, hats, caps, and cotton tissues. The principal gains were in sugar, coal, cotton yarns, and cotton knit goods, and these were not large. On the import side there were some heavy declines too, especially in rice, sugar, rubber, hemp, flax, wool, oil cake, copra, pig-iron, iron pipes and tubes, and petroleum; but, on the other hand, fairly good gains were registered in beans, peas, skins, raw cotton, Chilian saltpetre, coal, ores, leather, coaltar dyes, caustic soda, soda ash, pulp, iron and steel plates, and sheets and bars, rails, lead, cotton tissues, woollen tissues, paper, nails, and machinery. The increase was especially marked in raw cotton, which rose from 36,629,000 yen last year to 49,616,000 yen this July. The value of rails and iron imports also nearly doubled, with machinery closely following.

As to destinations of trade there was nothing very

unusual, perhaps, unless it be the remarkable drop in trade with China. The total value of Japanese exports to that country in July amounted to only 19,247,000 yen as against the total value of 34,762,000 yen for the same month last year, a decline of 15,515,000 yen. On the other hand, the total value of imports from China reached only 8,604,000 yen as against a value of 26,243,000 yen for imports in July last year, a fall of no less than 18,639,000 yen. It is probable that sharp fluctuations of silver and the disturbed conditions of the country were responsible for some of the decline, though financial conditions in Japan had not a little to do with it also. The largest drop is noticeable in imports of raw materials from central China, the value of which fell from 14,538,000 yen last July to only 4,287,000 yen this year. But trade with China for the whole seven months declined as well, exports dropping from 249,228,000 yen last year to 244,513,000 yen this year, and imports falling from 159,653,000 yen to 138,068,000 yen.

In spite of economic and industrial depression, as well as the adverse attitude of Japan's foreign trade, the nation's specie holdings continue to maintain their volume pretty well. In the middle of July the total national holdings were 1,922,000,000 yen, of which 897,000,000 yen belonged to the Government and 1,025,000,000 yen to the Bank of Japan. Of the total, some 760,000,000 yen were at home and 1,162,000,000 yen in England and America, the greater part in England. The Government announces loans for the coming year to the value of 418,000,000 yen, but the general belief is that the money will be borrowed from the Bank of Japan rather than by the floating of public loans, which might tend to tighten money still further. Promotion for the last few months has remained slow and cautious. In July no more than 195,525,000 yen was invested in promoting new enterprises, and it is significant that it went into such undertakings as banks, factories, and railways rather than into spinning mills and gas works as formerly. Depression is echoed in the liquidation of no less than 182 concerns during July, but this was 374 less than in June, the capital involved in July failures amounting to some 37,786,000 yen. At the same time the average net return on Japanese securities was 16.30 per cent., the highest since 1912. Company and bank shares are mainly responsible for raising the average dividend.

NORWAY.—THE EXCHANGE—LABOUR TROUBLES—THE HARVEST.

(FROM OUR CORRESPONDENT.)

CHRISTIANIA, September 7.

SEVERAL means are being tried to counteract the fall of the external buying power of the krone. Recently the Government issued a prohibition against the importation of a series of articles that may be considered as luxuries. An association is being formed, headed by representative ladies and gentlemen, the members of which are to pledge themselves to frugality and economy for the next twelvemonth.

Meanwhile the labour troubles are being mostly settled, in some cases voluntarily by negotiations between the parties, and in some cases through the Court of Arbitration that has now been sitting for two or three months. As a rule, peace is established only through concessions to the workmen; the result in a few cases has been to stop the works, and in most cases employers look forward to the near future with considerable fears.

The Stock Exchange, if anything, has been a little firmer lately for most shares and stocks, with a little more doing, but scarcity of money and restrictions in different ways discourage speculation, which, under the existing circumstances, is only a qualified evil.

Hay-making is long ago finished, and the crop was very plentiful. The weather lately has been rather unstable, jeopardising the corn harvest, which is in full swing, and which, if successfully finished, promises very well both as to rye and barley, the chief cereals.

A sample fair, similar to those held in many other countries, has just been opened here, and proved a success.

Letters to the Editor.

CURRENCY AND PRICES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I see now that Labour delegates have demanded a reduction of the currency—deflation—in order to lower prices, and enable everybody to buy more for the same amount of money, to consume more.

The demand is quite rational—the large majority of economists have told us, and tell us, that inflation is the chief cause of the rise in prices. And naturally the demand is: if some pottering with the monetary system prevents us getting as much bread and jam and tobacco for a shilling as we used to get, then potter again reversingly with the system that all may be as it used to be.

May one who belongs to the small minority who does not regard inflation as a cause of the rise in prices, nor in the possibility or effectiveness of deflation, utter a word of warning? I will not try to argue about the chief point at issue. I know that the "quantity theory" has passed above the stage of discussion, that anyone who still argues it must be considered a bore. But I say that it is just as ridiculous to maintain that because the prices depend on the amount of money and the velocity of circulation of money an increase in the amount of money must cause a rise in prices as to say that because the amount of logs depends on the number of axes and the velocity with which they are wielded the amount of woodcutters' axes determines the amount of logs. In other words, I deny that the amount of money is a primary cause, but hold it to be a consequence.

As the only real remedy the deflation theorists really advise is economy and retrenchment and amortising and consolidating of the national debts, all wholesome and good measures according to any system, the harm done by the cry for deflation seems very small.

But if the popular belief comes to be that indeed some miraculous policy of the President of the Bank of England and the Government can "deflate" the monetary system and give a shilling a higher purchasing power, great harm is done. And as the advices of your esteemed journal have influence on public opinion beyond the frontiers of the British Empire, will you allow me to try to explain that this fond belief cannot be well founded?

Mr Gibson has stated that 90 per cent. of the fruits of production are consumed by "labour," by wage-earners. Without venturing to name a percentage, I have also many times shown that the great mass of production is consumed by wage-earners. Nobody will contradict that a very large percentage of the wages are absolutely consumed. It is not necessary to be a very great mathematician to find out that consequently there must be an equity; totality of wages equal to, say, value in money of 90 per cent. of the production. Consequently, if wages go up, absolutely independently of the question whether a rise in wages must raise the cost price of production, the selling price of production must go up relatively.

Let us take it that the leading economists all are right, and that deflation sends up the purchasing power of a shilling with a bound. Then the equity I have come to shows that the wages necessarily must come down, too. In other words, if, indeed, deflation means a rise in the purchasing power of a shilling, it means also that a shilling will buy more labour. The purchasing power of the shilling can only rise by a lowering of the wages. And if the big and leading economists are right, deflation must lower the standard of wages. It is not of any use to consider whether this is worth so many troubles, and whether the labourer with a smaller wage and a larger shilling, a shilling with a greater purchasing power, will not sigh: "plus que ça change, plus que c'est la même chose." It is, as I believe, not of so very much use to think of that, as I do not believe in the possibility of deflation; I do not believe in the possibility of lowering the standard of wages by any financial policy. I believe that the only two real effective and permanent influences on the standard of value are production and wages. The war sent the prices up because temporarily—by lending money and creating artificial buying power—consumption and waste were greater, production less. And the desire of the wage-earner to consume as much as before, though there was

less to divide among them, sent up the wages. So here the primary mover was the desire of the wage-earner to get more. He did not get more money because his employers had such a tremendous amount of inflated currency that they had no better use for it, but simply because he wanted to consume as much as before, and public opinion said he was right.

Is not it rather funny that the same economists who rightly preach economy as a necessary way to retrieve the losses of the war also want by "sound" financial and banking politics mysteriously to reform the monetary system, by which reform every man in England will be able to spend—in goods, in whisky, and jam, and automobiles, for he is not wanting in bread—more than he spends now? There must be something mad in the system.

I say again, the harm is not so great because the consequences of "deflation" would be so bad. The harm done by the theory is only that people will fail to see that the financial policy is a side issue, and in England how strange it may sound, of minor importance for the purchasing value of money (for in England they will not follow the Bolshevik financial policy), and that the only salvation lies in better production, better organisation, less waste, and all the good measures you, Mr Editor—though differing with me in opinion on this side issue—have so ably defended in your journal.

Please excuse verbosity and bad English.

A. G. Boissevain.

Amsterdam, September 10th, 1920.

THE QUESTION OF CREDIT.

TO THE EDITOR OF THE ECONOMIST.

Sir,—In a letter published in your columns of September 11th, Mr T. B. Johnston says he discovers that I look at the problem of credit from the consumer's point of view and he from the producer's. Why he thinks that I do not know, I have never mentioned the consumer or producer that I remember. Possibly he thinks I wish for a reduction of prices to benefit the consumer, but as he himself points out all consumers are producers, so that if a fall of prices benefited one it would the other. So I do not see that there is any point in his reference to "consumer's view."

I have never thought that a fall of prices is an advantage to anyone. What I have wished to point out is that the inflation of prices has made a fall inevitable, and that the further depreciation of currency by the issue of more paper, as desired by Mr Johnston, would in no way prevent such ultimate fall of prices. It might defer the day (?), but only to make a greater disaster in the end.

The point is, Mr Johnston has not yet shown that a further depreciation of the pound note would not follow an increased issue. Therefore it appears that prices and wages would go up without end, and the demand for credit to finance the increasing cost of business and stocks would go up too. So the banks would be no better off for the increased supply of currency; their liabilities would increase as fast as their cash reserve. Probably considerably faster, due to the rampant speculation that Mr Johnston admits is common to a time of plentiful currency.

I see no evidence that there is any shortage of legal tender currency, the high Bank rate does not prove that there is. The willingness of banks to lend at low interest depends chiefly on the proportion of the credits deposited with them to the liabilities that their current business involves.

Four £1 notes will not purchase the ounce of gold they stand for, they have depreciated in value; nor will the goods represented by the four notes exchange for an ounce of gold, they have depreciated. So have the bills of exchange that represent the goods; and if they continue to depreciate, how is the bank to know what actual value such bills are security for? The advantage of a gold standard of value is that the bank can measure its securities and liabilities in a commodity, the value of which it has a business chance to understand and know. Whereas the bank has no possible chance to know the real value of a promiscuous assortment of commodities on security of which any rampant speculator may have drawn a bill.—Yours faithfully,

Albert Wallis.

Westacre, Kettering, September 14th, 1920.

Books and Publications.

FROM TEXAS TO CAPE HORN.

"Spanish America: Its Romance, Reality, and Future." By C. R Enock, C.E., F.R.G.S. Two Vols., with 25 Illustrations (South American Series). London: T. Fisher Unwin, Limited. 1920. 30s net

Mr Enock is well known as a traveller with long experience of Spanish America and its peoples; and he here surveys the whole continent from the United States southwards, including British Honduras, British Guiana, and Brazil. The book is meant primarily for the general reader, and quotes largely from previous volumes of the series. Readers of the *Economist* may be specially directed to the brief but valuable sketch in the second volume of the limitations of the South American market for imports and of the conditions of success in it. Of a population of some 80 millions only 10 per cent. can buy foreign manufactured goods, so that local markets may easily be glutted; and further limitations are imposed by the increasing cost of transport and by the tendency of nations to become more and more self-supplying. But machinery, steel-work, the best qualities of textiles, and all sorts of novelties will long be supplied only from abroad. Commercial travellers must study Spanish-American manners and character, and British traders must see that "the word of an Englishman" remains a proverb for honesty and fair dealing. Mr Enock suggests that, in view of present and future labour unrest, the capitalists responsible for investments in South America should establish an advisory body in London to study the economic and social conditions of the native and immigrant workers. British influence and sympathy, he points out, may be of great value in the development of the South American peoples, which, in fact, are still in the making; British settlers (with a profession or some capital) would be cordially welcomed in the small towns of the interior, and we echo Mr Enock's hope that no obtacles to increased intercourse with Great Britain will be imposed by the increasing cost of oceanic travel.

BOOKS RECEIVED.

Eastern Exchange, Currency, and Finance. By William F Spalding. (London) Sir Isaac Pitman and Sons, Limited. Third Edition. 15s net.

In this edition Indian, Chinese, and exchanges of Eastern countries receive full attention in view of the many and diverse changes that have recently occurred, while the silver problem is also dealt with. The whole of the matter has been brought up to date.

Wealth, Its Production and Distribution. By A. W. Kirkaldy, M.A. (London) Methuen and Co., Limited. 5s net.

This Bank is in close touch with leading Bankers in all parts of the world, and provides facilities for the financing of every description of Overseas business.

Traders interested in the Foreign Markets are invited to correspond with

THE FOREIGN MANAGER.

Foreign Branch: 168, Fenchurch Street, E.C.3.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

Ticket.	Account.
September 29.	September 30.

Although in some ways the volume of Stock Exchange business has been dictated by coal strike considerations, it is also correct to say that markets have found a good deal of business in one direction and another; possibly more than might have been expected, having regard to the outlook. At the beginning of the week the position was viewed with seriousness, and distinct weakness developed, though this became wiped out by more cheerful views which prevailed on Thursday. No slight relief was felt at the easier situation in the electrical trades' dispute. The Cape has been a buyer of Kaffirs to some extent, and Paris sent supporting orders to the oil market. Money is scarcely a factor at the moment; there is a fairly general hope that the autumn may not bring the rise in the Bank rate that was anticipated last month.

War Loans, a few National War Bonds, and several Corporation stocks have leaned to the lower side. To account for this, some state that the Trades Unions have been selling stock by way of making provision in advance for the possibilities of strike-pay distribution. There are, however, rumours about in connection with possible new borrowings, and the Michaelmas quarter is seldom one in which gilt-edged securities show improvement. In the Foreign market no little activity prevails. Mexican bonds have been the most dramatic, so far as movements are concerned, prices advancing sharply in response to the continued optimism felt as to Mexican prospects. French bonds strengthened at one time, on the reported success of the new Franco-American loan in New York, but the market is a little unstable. Japanese, Cuban, and dollar securities of all kinds have risen materially. In some of the American lists, for instance, quotations have gone up as much as 5 to 15 points. Argentine, Brazilian, and Chilian bonds are inclined to be harder on the whole. German Threes receded to 6¾. Talk of a forthcoming Norwegian loan attracted attention to the existing Norwegian Threes, which stand about 41½.

The Home Railway market is in a parlous state in regard to business, but prices have gone back comparatively little. Some of the small stocks are easier, the groups, as a whole, however, maintaining a surprising degree of firmness, which the market puts down to the fact of there being so little interest taken in the stocks. Undergrounds advanced because of next week's rises in fares. Grand Trunks are a heavy market. Mexican Rails keep steady, and it is reported from generally reliable quarters that the line is doing by no means badly, and that it may not be long before publication of weekly traffics is resumed. The Argentine railway list moves erratically. San Paulos weakened, and other Brazilians are inclined to droop. There is nothing doing in nitrates.

Rubber having fallen further, there is little of fresh interest to record about the share market. The Rubber Trust Company is issuing new shares, dealings in which have helped to save the market from complete stagnation. Prices have given way where they have moved at all. The oil market is the theatre of lively activity. Prices moved sensitively, according to the strike-views which obtained from day to day. In the leading shares a good deal of speculation continues, in spite of the handicaps imposed upon it, and, after a shake-out of the bulls in the early part of the week, substantial rallies occurred. Dunlop Rubbers are now quoted ex rights, and the old price has been divided by four, as each old share receives three new shares for nothing. The value of the rights themselves is worth about 3d to 6d. Textiles and iron and steel shares depended for their tone upon the coal outlook from hour to hour, prices finishing the week well above the lowest. The shipping group remains dull. Canadian banking shares have gone back. The insurance market is uncertain, though the better tendency noticed last week continues in evidence. A few tobacco shares are better. British Oil Cakes rose with a rush, on renewed rumours of absorption. Tea shares are decidedly flat, owing, of course, to the position of the tea industry at the present time. Several of the land shares are better, Sudan Plantations, in particular, coming to the fore.

The South African market is not left without evidence of strength so far as intrinsic considerations are concerned, the price of gold being high, individual returns from the mines mostly good, and the Cape rendering a certain amount of support. Over here, however, the public decline to look at Kaffirs, and public business is on a small scale. Rhodesians advance a trifle here and there, and diamond shares, together with Rio Tintos and others in the copper group, owe irregular movements to Paris advices. The Mexican market is the best amongst the mining sections. Satisfactory developments and expectations of resettlement of the country play their part in directing mild attention to Mexican mining shares, and this has assisted prices. A new issue by the Santa Gertrudis company is said to be on the way. In the rest of the mining sections there is barely a breath of business. Burmah Corporations were quoted in their split form on Thursday, and this proved a favourable influence upon the price.

NEW ISSUES.

5-15 Year Treasury Bonds, repayable at par on May 1, 1935, bearing interest at a minimum rate of £5 per cent. per annum, payable half-yearly on May 1st and November 1st. Price of issue fixed by H.M. Treasury at £100 per cent., payable on application. These are still on offer. For full particulars see *Economist* of May 1, 1920, pages 899 and 915.

London Housing Bonds.—Registered bonds for £5 each or multiples thereof are obtainable for terms of 5, 10, or 15 years, at applicant's choice. Six per cent. interest and full repayment when due are guaranteed by the London County Council on the security of London's rates. Interest payable each September 30th and March 31st. The money will be applied solely for the purpose of housing schemes approved by the Government, and in particular to finance the housing schemes of the Metropolitan Borough Councils. We referred to these bonds in a leader in the *Economist* on June 12th, page 1282.

Six per cent. Corporation Stocks.—Application will be received by the Bank of England, London County Westminster and Parrs Bank, and the National Provincial and Union Bank of England for the following:—£500,000 Brighton Corporation, £1,500,000 Bristol Corporation, £1,000,000 Plymouth Corporation, £1,000,000 Portsmouth Corporation, and £1,000,000 Swansea Corporation, six per cent. redeemable stocks, 1940-1950, in each case at the price of £95 10s per cent. The stocks will be redeemed at par, dividends being paid half-yearly. The Ministry of Health requires the corporations to make annual provision for the ultimate redemption of the debt created by the issue by means of sinking funds, and to furnish annual returns showing the position of their loan accounts. The proceeds of the issue are to be applied for housing and other purposes. These are trustee investments.

The Anglo-Newfoundland Development Company, Limited.—Incorporated under the laws of Newfoundland.—Authorised capital $7,000,000, of which $6,626,000 has been issued. A first mortgage debenture stock of £404,040 is outstanding. This is an offer for sale of £800,000 8 per cent. fifteen-year second mortgage debentures at 98 per cent. These debentures are repayable by annual instalments at 103 per cent. They will be secured by a trust deed as a second specific mortgage on the property and assets of the company. The repayment of capital and interest is also guaranteed by the Associated Newspapers, Limited, and the *Daily Mirror* Newspapers, Limited. The company was formed in 1905 to supply paper to the *Daily Mail* and *Daily Mirror*, and began paper production in 1910. The offer for sale is made by the British, Foreign, and Colonial Corporation, Limited, and the price paid by them to the company is £92 10s per cent. The assets of the company, less outstanding debentures, are given as £2,055,720, but there does not appear to be an independent valuation attached. Profits are given from 1913. The outlook for the paper industry for the present is distinctly bright. These debentures are an attractive offer, well secured both as regards capital and interest. The issue was over-subscribed.

Burma Corporation, Limited.—Incorporated under the Indian Companies Act, 1913. Authorised capital Rs. 20,00,00,000 (£20,000,000) in ordinary shares of Rs. 10 each. Issued, or "agreed to be issued," Rs. 13,54,16,890. This is an offer for sale of Rs. 1,00,00,000 (£1,000,000) 8 per cent. convertible first mortgage debenture stock, 1925-1930, at par, repayable at 110. A stockholder has the right on June 30th or December 31st in any year, to exchange stock at par into shares of the company at the rate of Rs. 11 of stock for one share of Rs. 10 up to 1923, or at the rate of Rs. 14 after that date, for one share, up to 1925. A redemption fund will be established at the end of 1925. This is part of an authorised debenture issue totalling Rs. 2,00,00,000 (£2,000,000). The whole will be secured by a trust deed in favour of trustees by means of specific mortgage on the properties and a floating charge upon the remaining assets of the company. The Burma Corporation was incorporated at Rangoon in December, 1919, and acquired the undertaking of Burma Mines, Limited, in consideration of Rs. 13,54,16,820 (£13,541,682) payable in shares of Burma Corporation, Limited. The value of the ore reserves given in the prospectus is of speculative interest, but from the debenture investors' standpoint an independent valuation of the properties and plant would have been preferable. Burma Mines, Limited, was formerly Burma Mines, Railway, and Smelting Company, Limited, registered in 1906. In 1908 the name was changed and in 1910 the capital reduced. According to the last issue of the "Stock Exchange Year-Book," the capital was £200,000 in shares of 4s, of which £144,915 has been issued and called up. For the outside investor the issue must be regarded as highly speculative. But those with inside knowledge may consider the undertaking more favourably.

Major and Co., Limited.—Authorised capital £450,000 This is an issue of 100,000 8½ per cent. cumulative preference shares of £1 each at par, and 60,000 ordinary shares of £1 each at par. The business was established in 1857, converted into a private company in 1896, and into a public company in 1906. The company's main business is distilling and defining coal-tar and petroleum products. It also owns "Solignum," a wood preservative. Surplus assets are valued at £291,893, as compared with an issued share capital of £225,000. Goodwill and trade marks are not taken into the accounts, which is a favourable point, but, on the other hand, we should like to know the basis of valuation for the shares in subsidiary and other companies at £53,832. Land, buildings, &c., appear to be much under current value. An interesting table is given in the prospectus, showing profits on the yearly average capital from 1910. We dealt with the position of this company at some length in the ECONOMIST for April 12, 1919 (see page 608). Six per cent. preference shares for £50,000 and 4½ debentures for £12,550 rank before these preference shares. The prospectus states that "the ordinary shares are entitled, out of the profits available for distribution in each year, after payment of the cumulative dividends on the preference shares and provision for reserves and after the payment of an 8 per cent. dividend on the preferred ordinary shares, to a dividend of 10 per cent., and after payment of such dividend of 10 per cent. to an equal division with the preferred ordinary shares of any balance." The preference shares are well secured, and the ordinary shares rank as a fair industrial risk.

T. H. Downing and Co., Limited.—Authorised capital £750,000, divided into 400,000 8 per cent. cumulative preference and 350,000 ordinary shares of £1 each. This is an offer of 350,000 of the preference shares at par. The firm was founded over 100 years ago, and carry on a business of wholesale hosiery warehousemen. It was converted into a private company in October, 1918. In spite of its having been established so long, profits are only shown from 1916. The company are the owners of many brands, including the trade marks, "Alpha," "Sensola," "Knitroyal," and "Sparkenhoe." The profits for year ended April 30 last amounted to £138,777, and the balance-sheet as at that date shows a surplus of assets of £367,136, excluding goodwill. Freehold premises and machinery are valued at £63,884. This is stated to be the original cost, less depreciation. According to an agreement, dated November 1, 1918, the business was sold for £235,947, the consideration being paid partly in shares and partly in cash, and by an agreement dated August 19, 1920, 80,000 ordinary shares were issued by way of undivided profits. The offer is a fair one in its class, but it is not attractive, and is not suitable for the small investor.

Namaqua River Lands, Limited.—Authorised capital £125,000, divided into 120,000 10 per cent. cumulative participating preference shares of 5s each (free of tax) and 380,000 ordinary shares of 5s each. Balance of profits after payment of a 10 per cent. dividend on the preference shares will be divided equally between preference and ordinary shareholders. This is an issue of the whole of the preference shares at par. It is provided that no prior charges can be created except with the consent of preference shareholders. The company has been formed to acquire, cultivate, and develop land in Cape Province, South Africa, and in the Protectorate of South-West Africa (formerly German South-West Africa). The purchase price works out at £79,000, but only £5,000 is paid in cash. The Orange River Ostrich Farm Syndicate, Limited, obtain £37,000 for "Goodhouse Farm and the assets connected therewith," and the promoters are interested in this vendor syndicate. No independent valuation appears. The prospectus fails to convince us, and we cannot recommend the issue to investors who are not in possession of fuller information than is provided in the prospectus.

Bexhill Water and Gas Company, Limited.—Authorised capital, including loans, £352,000, of which ordinary preference capital has been issued amounting to £180,070. There are also £48,000 of 4 per cent. debentures. This is an issue of £30,000 7½ per cent. debenture stock at par. The interest on the existing debenture stock and on the above issue will amount to £4,170 per annum, and as the net revenue of the company for the twelve months ended June 30, 1920, was £10,027, the issue appears to be well secured both as regards capital and interest. Investors, however, should not overlook the confined market for these debentures in event of realisation.

B. Laporte, Limited.—This is an issue of 20,000 7½ per cent. cumulative "B" preference shares of £1 each at par, and 12,000 ordinary shares of £1 each at 26s 6d. Each applicant for five preference shares has the right to apply for three ordinary shares. These shares are offered to the present shareholders and "personal friends." The information given in the statement of offer and the accompanying report of thirteenth annual general meeting is insufficient to gauge the position of the company.

COMPANY MEETINGS, &c.

PRUDENTIAL ASSURANCE COMPANY, LIMITED.

APPOINTMENT OF SIR THOMAS C. DEWEY AS PRESIDENT.

An extraordinary general meeting of the shareholders of the Prudential Assurance Company, Limited, was held, on the 16th instant, at 142 Holborn bars, London, for the purpose of considering, and if thought fit, passing a resolution appointing Sir Thomas Charles Dewey, Bt., as president of the company on his retirement from the chairmanship.

Sir Thomas Dewey, who was received with cheers, announced that he had that morning tendered his resignation as chairman of the board, which had been accepted by the directors, who in his place had appointed Mr A. C. Thompson, the general manager, as the chairman ot the board. (Hear, hear.)

Mr Thompson, who then took the chair, said that before commencing the business of the meeting he would like to take the opportunity of thanking the shareholders for what he might describe as the endorsement of the action of the directors in electing him to the chair. They had all anticipated that the board might have had the opportunity of considering the claims of the deputy chairman, Mr Edgar Horne, for election, but owing to the pressure of that gentleman's Parliamentary and other duties, he (Mr Horne) did not see his way to allow himself to be nominated for the office. It was a matter for great satisfaction that Mr Horne was willing to retain the office of deputy chairman under the new arrangement. (Hear, hear.)

The secretary (Sir George May, K.B.E.) then read the notice convening the meeting.

Mr W. E. Horne, M.P., in moving that Sir Thomas Dewey be elected to the presidency of the company, stated that Sir Thomas had first become associated with the Prudential about sixty-three years ago. Sir Thomas was appointed manager of the industrial branch in 1873, and in 1904 he became general manager. Six years later, after having served about three years in the capacity of deputy-chairman, he was elected by his fellow directors to be chairman of the company. In following in the steps of his predecessor, the late Sir Henry Harben, Sir Thomas thus became the second occupant of the position of president.

The growth of the Prudential during his sixty-three years of service—the premium income having increased from just over £5,000 to about £22,000,000—could only be described as phenomenal, and must be considered a wonderful tribute to the untiring energy and admirable foresight displayed by its new president in the many important positions in the company which he had held during the last half-century. As an authority on life assurance in general, and industrial life assurance in particular, Sir Thomas had in past years held a reputation second to none. As early as 1882 he was elected a fellow of the Institute of Actuaries; in 1889 he gave evidence before a Select Committee of the House of Commons and, again, a year later, in 1890, before a Committee of the House of Lords. Sir Thomas Dewey was, however, a man of many parts. While attaining an extraordinary measure of success in the world of insurance, he also achieved considerable distinction in other directions. During the war—in 1916, to be precise— in spite of advancing years and pressure of other duties, Sir Thomas found time and opportunity, at the instance of the Government, to serve with distinction as a member of the War Office Expenditure Committee. This position was far from being a nominal one, and insurance men were extremely gratified that his Majesty should in 1917 signify his appreciation of the labours of Sir Thomas by conferring upon him his present title. It seemed, therefore, singularly fitting after so many years of eminent service in the world of insurance and in local and national affairs, that the shareholders of the Prudential should honour Sir Thomas, as well as themselves, by electing him their president.

Sir William Lancaster seconded the motion, which was supported by several shareholders, and on being put to the meeting was carried with acclamation.

It was subsequently stated that Mr Thompson was succeeded in the position of general manager by Sir Joseph Burn, K.B.E., the actuary of the company. Sir Joseph Burn, like his two predecessors, joined the Prudential in his early youth. As an actuary Sir Joseph had a very high reputation. His experience in the valuation of pension and superannuation funds was probably unequalled, and at the present moment he was one of the vice-presidents of the Institute of Actuaries. His sphere of influence, however, extended beyond the insurance world. In the City he was recognised as a financial expert of a considerable experience. Besides being an authority on Indian railways and American securities, he was also a director of the British Italian Corporation. During the war Sir Joseph Burn took a great interest in the War Savings Committee, being from its inception one of its chief members. Latterly he was a member of the Royal Commission on Decimal Coinage, where his knowledge of the habits of the masses in regard to their monetary affairs was of great value.

The board of directors have in consequence of these appointments made further changes among the officials of the company by appointing the assistant managers, Messrs A. R. Barrand, M.P., F.I.A., E. Dewey, and H. R. Gray, to be deputy general managers. The board of directors have also appointed the assistant actuary, Mr F. P. Symmons, F.I.A., to be deputy acutary, and Mr W. C. Sharman, F.I.A., the present assistant secretary, to be deputy secretary.
